[1] Case count may be inflated because States reporting identical number of cases and children may count each child in foster care as a family case.

[2] Data incomplete, see footnote 4.

[3] Data estimated.

[4] Data not reported.

[5] Not computed on base of fewer than 50 cases or children.

**Table M-33.—Emergency assistance:[1] Families receiving assistance and amount of payments, by State, December 1980**

| State | Number of families |  |  | Amount of payments |  |  |  |
|---|---|---|---|---|---|---|---|
|  | Total | AFDC cases | Other | Total | Average per family | Maintenance | Medical care |
| Total | 52,051 | 40,887 | 10,902 | $10,252,544 | $196.77 | [2] $9,764,650 | [2] $487,894 |
| Arkansas | 197 | 149 | 48 | 7,900 | 40.10 | 7,490 | 410 |
| Connecticut | 0 | 0 | 0 | 0 | (3) | 0 | 0 |
| Delaware | 193 | 193 | 0 | 18,716 | 96.97 | 18,716 | 0 |

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

**Table M-35.—Black lung benefits: Number of beneficiaries, average monthly family amount, and total monthly family amount in current-payment status, 1970–82**[1]

| At end of selected month | Number of beneficiaries | | | | Average monthly family amount | | | Total monthly family amount (in thousands) | | |

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] |  | Initial claims (weekly average) [4] | All types of compensated unemployment |  |  |  | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
|  | Number of workers [2] | Percent of covered employment [3] |  | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries |  |  |  |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

[9] Preliminary data.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-37.—Unemployment insurance: Selected data by State, July 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent of covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid [4] | Average weekly number of beneficiaries | | |
| Total | [6] 2,742,877 | 3.8 | 462,927 | [6] 821,637 | 10,485,922 | $1,061,898,502 | 2,279,548 | $103.56 | 246,839 |
| Alabama | 51,648 | 4.1 | 12,535 | 27,622 | 205,090 | 15,428,433 | 44,585 | 76.72 | 4,972 |
| Alaska | 8,487 | 5.7 | 1,293 | 2,566 | 34,606 | 4,201,898 | 7,523 | 123.66 | 802 |
| Arizona | 23,537 | 2.4 | 3,673 | 7,275 | 85,860 | 7,287,557 | 18,665 | 85.55 | 1,786 |

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Preliminary data

[7] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-38.—Gross national product and personal income, by type, 1950–81

[Amounts in billions. Monthly amounts at annual rates. Before 1960, data for the 48 States and the District of Columbia, except where otherwise noted; beginning 1960, includes Alaska and Hawaii]

| Period | Gross national product [1] | Personal income | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Wage and salary disbursements [2] | Social insurance and related payments [3] | | Public assistance and related payments [4] | | Other income [5] | Less personal contributions for social insurance [6] |
| | | | | Amount | Percent of personal income | Amount | Percent of personal income | | |
| 1950 | $286.2 | $226.1 | $147.0 | $7.0 | 3.1 | $2.3 | 1.0 | $72.7 | $2.9 |

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the social security program.

## Table M-39.—Civilian population and labor force, 1940–81

---

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## **Table M-40.**—Consumer Price Index for urban and clerical workers, 1940–81[1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |

---

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pages 7–8.

---

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pages 7-8.

[2] Consists of charges for semiprivate room; operating room; X-ray diagnostic series, upper G.I.; and the following ancillary services; physical therapy, oxygen, intravenous solution, electrocardiogram, antibiotic, tranquilizer, and laboratory tests.

[3] Includes charges to adult inpatients paying full rates for room and board, routine nursing care, and minor medical and surgical supplies.

Q-1.—Estimated payrolls in employment covered by selected social insurance programs in relation to wages and salaries, 1950-78 . . . . . 59

Q-2.—OASDI benefits in current-payment status: Number and percent of OASDI beneficiaries in concurrent receipt of federally administered SSI payments, by type of beneficiary, December 1981 . . . . . 60

Q-3.—OASDI: Workers, total and taxable earnings, and employers reporting taxable wages, 1940-77 . . . . . 61

Q-4.—OASDI and SSI: Population aged 65 and over receiving OASDI cash benefits, SSI payments or both, 1940-79, and rank by State, 1979 . . . . . 62

Q-5.—OASDI cash benefits: Number and average amount of retired-worker benefits in current-payment status with and without reduction for early retirement, by sex, 1956-81 . . 63

Q-6.—OASDI cash benefits: Number and average monthly amount of retired-worker benefits awarded with and without reduction for early retirement, by status of award, 1956-81 . . . . . 64

Q-7.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and husbands of retired workers, 1950-81 . . . . . 65

Q-8.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and husbands of disabled workers, 1958-81 . . . . . 66

Q-9.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for children, 1940-81 . . 67

Q-10.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for mothers, widows, and widowers, 1950-81 . . . . . 68

Q-11.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and mothers with entitlement based on the entitlement of a disabled person to a child's benefit, 1957-79 . . . . . 69

Q-12.—OASDI cash benefits: Number of monthly benefits awarded to children, 1940-81 . . . . . 69

Q-13.—OASDI cash benefits: Number of monthly benefits being withheld, by reason for withholding payment and by type and age of beneficiary, at end of December 1981 . . . . 70

Q-14.—OASDI benefits: Number of monthly benefits in current-payment status, by type of beneficiary and by State, June 1980 . . . . . 71

Q-15.—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and by State, June 1980 . . . . . 72

Q-16.—OASDI benefits: Estimated amount of payments, by type of program and beneficiary and by State, fiscal year 1980 . . . . . 73

Q-17.—OASDI cash benefits: Estimated number of families and beneficiaries receiving benefits and average monthly benefit in current-payment status, by family group, at end of December 1977 and 1978 . . . . . 74

Q-18.—Hospital insurance: Number of bills approved for payment and amount reimbursed, by type of benefit, type of beneficiary, and period approved, as of August 29, 1981 . 75

Q-19.—Hospital insurance: Number of bills for inpatient short-stay hospital care approved for payment, covered days, total charges, and amount reimbursed, by type of beneficiary and period approved, as of August 29, 1981 . . 76

Q-20.—Medical insurance: Number of reimbursed bills and amount reimbursed, by type of service, type of beneficiary, and period recorded, as of October 31, 1981 . . . . . 77

Q-21.—Medical insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of October 31, 1981 . . . . . 78

Q-22.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and average monthly amount, by reason for eligibility and type of payment, December 1981 . . . . . 79

Q-23.—Supplemental Security Income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments by reason for eligibility, sex, and race, December 1981 . . . . . 79

Q-24.—Supplemental Security Income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility and living arrangements, December 1981 . . . . . 79

Q-25.—Supplemental Security Income for the aged, blind, and disabled: Number of persons in concurrent receipt of federally administered payments and unearned income other than social security benefits and average monthly unearned income, by reason for eligibility and type of income, December 1981 . . . . . 80

Q-26.—Supplemental Security Income for the aged, blind, and disabled: Number and percentage distribution of adults receiving federally administered payments, by reason for eligibility and age, December 1981 . . . . . 80

Q-27.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments, by reason for eligibility and State, December 1981 . . . . . 80

Q-28.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving Federal SSI payments, by reason for eligibility and State, December 1981 . 81

Q-29.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 82

Q-30.—Supplemental Security Income for the aged, blind, and disabled: Average monthly amount of combined Federal and State payments in States with federally administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 83

Q-31.—Supplemental Security Income for the aged, blind, and disabled: Average monthly amount of Federal SSI payments, by reason for eligibility and State, December 1981 . 83

Q-32.—Supplemental Security Income for the aged, blind, and disabled: Average monthly amount of federally administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 84

Q-33.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and/or State-administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 84

Q-34.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving Federal SSI payments in States with State-administered State supplementation, by reason for eligibility and State, December 1981 . 85

Q-35.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 86

Q-36.—Supplemental Security Income for the aged, blind, and disabled: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 87

Q-37.—Supplemental Security Income for the aged, blind, and disabled: Average monthly amount of State-administered State supplementation, by reason for eligibility and State, December 1981 . . . . . 87

Q-38.—Black lung benefits to miners and their spouses and children: Number and monthly amount in current-payment status, by State, December 1981 . . . . . 88

## Table Q-1.—Estimated payrolls in employment covered by selected social insurance programs in relation to wages and salaries, 1950–78

[Amounts in millions. Except as noted, data are for conterminous U.S. before 1960 and, beginning 1960, includes Alaska and Hawaii]

| Period | Wage and salary disbursements [1] | | | | Payrolls in employment [4] covered by— | | | |
|---|---|---|---|---|---|---|---|---|
| | Total | Civilian | OASDHI [2] | | Railroad retirement and unemployment insurance [5] | | State unemployment insurance [6] | |
| | | | Amount | Percent of total wages and salaries [3] | Amount | Percent of civilian wages and salaries | Amount | Percent of civilian wages and salaries |
| Calendar year: | | | | | | | | |
| 1950 | $147,026 | $141,773 | $109,400 | 74.4 | $5,327 | 3.8 | $102,765 | 72.5 |
| 1955 | 211,669 | 201,488 | 169,400 | 80.0 | 5,801 | 2.9 | 158,439 | 78.6 |
| 1960 | 271,932 | 261,517 | 234,300 | 83.8 | 5,648 | 2.2 | 209,665 | 80.2 |
| 1961 | 279,462 | 268,886 | 238,800 | 85.4 | 5,345 | 2.0 | 214,137 | 79.6 |
| 1962 | 298,043 | 286,787 | 255,700 | 85.8 | 5,381 | 1.9 | 228,549 | 79.7 |
| 1963 | 313,385 | 301,881 | 268,200 | 85.6 | 5,350 | 1.8 | 240,099 | 79.5 |
| 1964 | 336,133 | 323,726 | 288,400 | 85.8 | 5,446 | 1.7 | 257,339 | 79.5 |
| 1965 | 362,005 | 349,075 | 308,600 | 85.2 | 5,590 | 1.6 | 277,143 | 79.4 |
| 1966 | 398,363 | 382,939 | 344,200 | 86.4 | 5,676 | 1.5 | 305,265 | 79.7 |
| 1967 | 427,490 | 410,422 | 374,700 | 87.7 | 5,734 | 1.4 | 325,073 | 79.2 |
| 1968 | 469,536 | 450,691 | 410,500 | 87.4 | 5,878 | 1.3 | 356,554 | 79.1 |
| 1969 | 514,570 | 494,561 | 452,500 | 87.9 | 6,092 | 1.2 | 392,679 | 79.4 |
| 1970 | 546,453 | 525,771 | 480,000 | 87.8 | 6,281 | 1.2 | 414,285 | 78.8 |
| 1971 | 579,431 | 558,713 | 505,200 | 87.2 | 6,602 | 1.2 | 439,510 | 78.7 |
| 1972 | 633,761 | 611,798 | 559,100 | 88.2 | 7,156 | 1.2 | 519,511 | 84.9 |
| 1973 | 701,270 | 679,149 | 619,800 | 88.4 | 7,936 | 1.2 | 581,367 | 85.6 |
| 1974 | 764,584 | 742,086 | 678,100 | 88.7 | 8,399 | 1.2 | 643,867 | 86.8 |
| 1975 | 805,872 | 782,776 | 713,000 | 88.5 | 8,346 | 1.1 | 679,845 | 86.9 |
| 1976 | 890,082 | 866,605 | 793,400 | 89.1 | 9,262 | 1.1 | 755,593 | 87.2 |
| 1977 | 983,642 | 957,931 | 883,200 | 89.8 | 10,038 | 1.0 | 837,281 | 87.4 |
| 1977 | | | | | | | | |
| April-June | 242,097 | 235,762 | 219,200 | 90.5 | 2,438 | 1.0 | 206,068 | 87.4 |
| July-September | 251,681 | 245,322 | 227,000 | 90.2 | 2,596 | 1.1 | 214,424 | 87.4 |
| October-December | 262,942 | 256,275 | 233,900 | 89.0 | 2,561 | 1.0 | 223,997 | 87.4 |
| 1978 | | | | | | | | |
| January-March | 252,186 | 247,621 | (7) | (7) | 2,450 | 1.0 | 242,973 | 98.1 |
| April-June | 272,558 | 266,083 | (7) | (7) | 2,611 | 1.0 | 245,640 | 92.3 |

[1] Gross amounts paid in cash and in kind, before deduction of social insurance contributions. Includes pay of Federal personnel (civilian and military) in all areas. Quarterly data estimated by Social Security Administration, not seasonally adjusted.

[2] Excludes earnings of self-employed persons, who have been covered since January 1, 1951. Beginning 1955, annual data include and quarterly data exclude wages and salaries of agricultural labor, reported only on an annual basis; beginning 1957, includes the Armed Forces in all areas. Annual data, but not quarterly data exclude payrolls in territories and possessions estimated at less than 1 percent of total.

[3] Before 1957, represents percent of civilian wages and salaries (Armed Forces covered under 1956 legislation).

[4] Taxable plus estimated nontaxable wages and salaries in employment covered by the program. Represents gross earnings, before deduction of social insurance contributions.

[5] Includes a small amount of taxable wages for Alaska and Hawaii.

[6] Beginning 1955, includes payroll of Federal, State, and local government employees except for the Armed Forces (provided with protection under the Ex-Servicemen's Unemployment Compensation Act of 1958).

[7] Data not available.

Source: Data on wage and salary disbursements from Bureau of Economic Analysis, Department of Commerce; payrolls covered by selected programs from reports of administrative agencies.

**Table Q-2.**—OASDI benefits in current-payment status: Number and percent of OASDI beneficiaries in concurrent receipt of federally administered SSI payments, by type of beneficiary, December 1981

| Type of beneficiary | All OASDI beneficiaries [1] | OASDI beneficiaries with SSI | | | | | |

---

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Excludes 76,323 special age 72 beneficiaries.

[3] Less than .05 percent.

## Table Q-3.—OASDI: Workers, total and taxable earnings, and employers reporting taxable wages, 1940–77

| Period | Workers (in thousands) | | | Earnings | | | | | Employers reporting taxable wages (in thousands) |
|---|---|---|---|---|---|---|---|---|---|
| | | Reported with taxable earnings [1] | | | Reported taxable [1] | | Average per worker | | |
| | Total, in covered employment | Total | Reported reaching maximum earnings | Total, in covered employment [2] (in millions) | Amount (in millions) | Percent of total | Total, in covered employment | Reported taxable | |
| | All reported employment [3] | | | | | | | | |
| 1940 | 35,390 | 35,390 | 1,191 | $35,700 | $32,970 | 92.4 | $1,009 | $932 | 2,500 |

[1] Taxable earnings includes wages and salaries on which employer taxes or contributions are based. The taxable limit was $3,000 in annual wages from each employer for years through 1950; $4,200 in annual wages or self-employment earnings in 1955; $4,800 during 1960–65; $6,600 during 1966–67; $7,800 during 1968–71; $9,000 in 1972, $10,800 in 1973, $13,200 in 1974, $14,100 in 1975, $15,300 in 1976 and $16,500 in 1977.

[2] Total wages through 1950, and total earnings beginning 1955; including estimated amounts above the taxable maximum.

[3] Beginning 1955, workers and earnings include self-employment.

[4] Preliminary data.

[5] Quarterly data not available for self-employment and agricultural employment. Total workers in covered employment includes estimated number of workers not reported because they had reached the taxable limit in an earlier quarter of the year.

[1] For 1940–73, data refers to old-age assistance program. Beginning January 1974, the supplemental security income program superseded the old-age assistance program in the 50 States and the District of Columbia.

[2] Population data, on which ratio is based, furnished by the Bureau of the Census. Data not adjusted for errors of coverage and of age misreporting.

[3] June data.

[4] February data.

[5] December data.

[6] Revised.

## Table Q-5.—OASDI cash benefits: Number and average amount of retired worker benefits in current-payment status with and without reduction for early retirement, by sex, 1956-81

| At end of selected month | Beneficiaries | | | | Average monthly benefits | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Total number | Without reduction for early retirement | With reduction for early retirement | | All benefits | Without reduction for early retirement | With reduction for early retirement | | |
| | | | Number | Percent of total | | | Before reduction [1] | After reduction | Percent reduction |
| | Total | | | | | | | | |
| December: | | | | | | | | | |
| 1961 | 8,924,849 | 7,468,585 | 1,456,264 | 16.3 | $75.65 | $78.81 | $67.92 | $59.42 | 12.5 |

---

[1] Not currently payable awards are conditional and deferred awards suspended immediately following determination, chiefly because of earnings of the retired worker. Since September 1965, most not currently payable awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Conversions are awards of retired-worker benefits to disabled-worker beneficiaries on attainment of age 65; transitionally insured awards are those made to persons aged 72 and over with 3–5 quarters of coverage.

[3] Excludes disability conversions and transitionally insured as well as not currently payable awards.

[4] Currently payable regular awards plus those originally awarded as not currently payable that have moved to payment status; excludes conversions and awards to the transitionally insured.

[5] The average amounts shown are based on monthly averages for September–December 1972 and reflect the benefit increases authorized by 1967 Amendments to the Social Security Act.

[6] Benefit amounts awarded prior to June are included in the computation of the average after being converted to June rates.

[7] Data not available.

[8] The average amounts shown are based on monthly averages for March–December 1968 and reflect the benefit increases authorized by the 1967 Amendments to the Social Security Act.

## Table Q-7.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and husbands of retired workers, 1950–81

| At end of selected month | Number | | | | Amount (in thousands) | | | |
|---|---|---|---|---|---|---|---|---|
| | | Wives [1] | | | | Wives [1] | | |

[1] Beginning June 1975, includes fathers with entitled children in their care.

[2] Includes surviving divorced wives and disabled widows.

[3] Includes disabled widowers. Dependency requirement for eligibility to benefits was eliminated in March 1977.

[4] Less than $500.

**Table Q-11.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and mothers with entitlement based on the entitlement of a disabled person to a child's benefit, 1957–79**

| At end of selected month | Number |  |  |  | Amount (in thousands) |  |  |  |
|---|---|---|---|---|---|---|---|---|
|  | Wives of— |  |  | Widowed mothers [1] | Wives of— |  |  | Widowed mothers [1] |

---

[1] Beneficiary by State of residence.

[2] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[3] Aged 62 and over.

[4] Under age 65.

[5] Includes wife beneficiaries aged 62 and over, nondivorced and divorced, and those under age 65 with entitled children in their care.

[6] Includes disabled persons aged 18 and over whose disability began before age 22 and entitled full-time students aged 18–21.

[7] Includes surviving divorced mothers and fathers with entitled children in their care.

[8] Aged 60 and over for widows, widowers, and surviving divorced wives, and aged 62 and over for parents. Also includes disabled widows, widowers, and surviving divorced wives aged 50–59.

## Table Q-15.—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and by State, at end of June 1980

[In thousands]

| State [1] | Total | Retired workers [2] | Disabled workers | Wives and husbands [3] of— Retired workers | Wives and husbands [3] of— Disabled workers | Children [4] of— Retired workers | Children [4] of— Deceased workers | Children [4] of— Disabled workers | Widowed mothers and fathers [5] | Widows and widowers [6] | Parents | Special age-72 beneficiaries |
|---|---|---|---|---|---|---|---|---|---|---|---|---|

[1] Beneficiary by State of residence.

[2] Includes special age-72 payments.

[3] Children, widows and widowers, widowed mothers and fathers, and parents.

**Table Q-17.—OASDI cash benefits: Estimated number of families and beneficiaries receiving benefits and average monthly benefit in current-payment status, by family group, at end of December 1977 and 1978**

| Family classification of beneficiaries | December 31, 1977 | | | December 31, 1978 | | |
|---|---|---|---|---|---|---|
| | Number of families (in thousands) [1] | Number of beneficiaries (in thousands) | Average monthly amount per family | Number of families (in thousands) [1] | Number of beneficiaries (in thousands) | Average monthly amount per family |
| Total | 26,524 | 34,110 | $271.20 | 27,161 | 34,598 | $310.40 |
| Retired-worker families | 17,824 | 21,493 | 267.70 | 18,361 | 21,999 | 315.20 |
| Worker only | 14,597 | 14,597 | 236.80 | 15,148 | 15,148 | 256.60 |
| Male | 6,564 | 6,564 | 265.90 | 6,791 | 6,791 | 288.90 |
| Full benefit | 3,035 | 3,035 | 290.70 | 3,044 | 3,044 | 316.90 |
| Reduced benefit | 3,528 | 3,528 | 244.60 | 3,747 | 3,747 | 266.10 |
| Female | 8,033 | 8,033 | 213.10 | 8,357 | 8,357 | 230.30 |
| Full benefit | 2,654 | 2,654 | 244.10 | 2,670 | 2,670 | 265.30 |
| Reduced benefit | 5,380 | 5,380 | 197.80 | 5,687 | 5,687 | 213.90 |
| Worker and wife | 2,681 | 5,361 | 404.40 | 2,697 | 5,394 | 437.50 |
| Full worker benefit | 1,408 | 2,815 | 437.30 | 1,362 | 2,723 | 475.60 |
| Reduced worker benefit | 1,273 | 2,546 | 368.00 | 1,335 | 2,671 | 398.60 |
| Worker and husband | 33 | 66 | 290.40 | 38 | 76 | 307.30 |
| Worker and children | 269 | 596 | 397.40 | 237 | 525 | 433.80 |
| Worker, wife and children | 244 | 873 | 468.00 | 241 | 856 | 510.50 |
| Wife entitlement not dependent on children | 50 | 157 | 491.90 | 52 | 161 | 533.50 |
| Wife entitlement dependent on children | 194 | 717 | 461.90 | 189 | 694 | 504.20 |
| Survivor families | 5,703 | 7,598 | 262.10 | 5,786 | 7,596 | 280.90 |
| Widow or widower only | 3,966 | 3,969 | 224.50 | 4,064 | 4,068 | 241.40 |
| Full benefit | 1,837 | 1,840 | 234.40 | 1,839 | 1,843 | 253.70 |
| Reduced widow benefit | 1,984 | 1,984 | 219.30 | 2,074 | 2,074 | 234.80 |
| Surviving divorced wife | 25 | 25 | 236.80 | 28 | 28 | 253.50 |
| Disabled widow or widower | 120 | 120 | 156.10 | 123 | 123 | 165.80 |
| Remarried widows | 69 | 69 | 134.20 | 72 | 72 | 143.50 |
| Widow or widower and children | 81 | 168 | 391.10 | 82 | 170 | 422.70 |
| Mother and children | 579 | 1,832 | 502.40 | 572 | 1,783 | 542.30 |
| 1 child | 221 | 449 | 436.80 | 228 | 466 | 474.10 |
| 2 children | 190 | 580 | 546.60 | 186 | 566 | 591.90 |
| 3 children or more | 167 | 803 | 538.60 | 158 | 751 | 582.80 |
| Children only | 990 | 1,539 | 271.70 | 979 | 1,486 | 291.00 |
| 1 child | 641 | 641 | 191.00 | 650 | 650 | 206.70 |
| 2 children | 216 | 433 | 390.00 | 209 | 417 | 428.90 |
| 3 children | 83 | 250 | 474.20 | 78 | 234 | 512.50 |
| 4 children or more | 49 | 215 | 457.80 | 42 | 184 | 498.50 |
| Parents with or without children | 18 | 19 | 210.90 | 16 | 17 | 228.60 |
| Disabled-worker families | 2,840 | 4,860 | 322.30 | 2,882 | 4,869 | 349.00 |
| Worker only | 2,004 | 2,004 | 256.50 | 2,043 | 2,043 | 277.90 |
| Male | 1,222 | 1,222 | 283.80 | 1,245 | 1,245 | 308.50 |
| Female | 782 | 782 | 213.80 | 798 | 798 | 230.20 |
| Worker and spouse | 80 | 159 | 407.50 | 81 | 162 | 443.00 |
| Worker and children | 341 | 919 | 432.00 | 348 | 928 | 472.60 |
| Worker, wife and children | 415 | 1,778 | 533.60 | 411 | 1,736 | 579.20 |
| Special age-72 beneficiaries | 157 | 159 | 78.80 | 132 | 134 | 83.90 |

[1] For a small number of retired-worker and disabled-worker families, the number of families exceeds the number of workers where the worker's benefit was not in current-payment status for some temporarily technical reason but some family members were still receiving their benefit.

**Table Q-18.—Medicare hospital insurance: Number of bills approved for payment and amount reimbursed, by type of benefit, type of beneficiary and period approved, as of August 29, 1981 [1]**

[In thousands]

| Period approved [2] | Total [3] |  | Inpatient hospital |  | Home health |  | Skilled-nursing facility |  |
|---|---|---|---|---|---|---|---|---|
|  | Number | Amount reimbursed [4] | Number | Amount reimbursed [4] | Number | Amount reimbursed [4] | Number | Amount reimbursed [4] |

| 1980 | 1,531 | $2,749,233 | 1,346 | $2,698,583 | 168 | $37,061 | 17 | $13,589 |
| Jan.-June 1981 | 774 | 1,548,381 | 677 | 1,520,458 | 89 | 20,963 | 8 | 6,962 |

[1] Includes only those bills recorded in the Social Security Administration central records before August 29, 1981. A bill does not necessarily represent a total stay in a covered facility or a complete series of visits covered under an established home health plan. Usually, more than one bill is submitted for each stay in a long-term hospital, or in a skilled nursing facility and for visits under a home health plan. Because of lags in bill processing by intermediaries and the Social Security Administration, data for recent time periods are incomplete; comparison of most recent periods with similar periods in earlier years are, therefore, not valid.

[2] Period in which the intermediary approved bills for payment.

[3] Included in total, but not shown separately, are bills for outpatient diagnostic services approved for payment under the hospital insurance program.

[4] Actual benefit payments as represented in trust fund transactions differ from amounts reimbursed as shown above, which represent payments for covered services based on an interim rate (either per diem or a percent of total charges) and adjusted at the end of each provider's operating year on the basis of audited reasonable costs of operation. Payments exclude deductibles and coinsurance amounts and noncovered services as specified by law.

[5] Includes data for services rendered to beneficiaries aged 65 and over, and the new group of beneficiaries, who became entitled to hospital insurance benefits on or after July 1, 1973, (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to hospital insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to hospital insurance benefits solely because of chronic renal disease.

**Table Q-19.**—Medicare hospital insurance: Number of bills for inpatient short-stay hospital[1] care approved for payment, covered days, total charges and amount reimbursed, by type of beneficiary and period approved, as of August 29, 1981[2]

| | Approved bills | | | Hospital charges | | | | |
|---|---|---|---|---|---|---|---|---|
| | | Covered days of care | | | | | Amount reimbursed[4] | |
| Period approved[3] | Number (in thousands) | Total (in thousands) | Average per bill | Total (in thousands) | Per bill | Per day | Total (in thousands) | Percent of total |
| | Total[5] | | | | | | | |
| 1974 | 8,073 | 87,925 | 10.9 | $10,524,686 | $1,304 | $120 | $7,936,618 | 75.4 |
| 1975 | 8,542 | 90,292 | 10.6 | 13,104,395 | 1,534 | 145 | 9,835,732 | 75.1 |
| 1976 | 9,084 | 95,060 | 10.5 | 16,215,493 | 1,785 | 171 | 12,074,678 | 74.5 |

| Jan.-Oct. 30, 1981 | 134,449 | 9,686,932 | 101,783 | 7,085,578 | 17,082 | 1,362,625 | 6,049 | 118,759 | 819 | 144,711 | 8,075 | 924,298 |
|  | Persons aged 65 and over[7] |  |  |  |  |  |  |  |  |  |  |  |
| 1980 | 136,558 | $8,608,990 | 105,143 | $6,724,177 | 16,531 | $1,006,146 | 5,869 | $105,008 | 1,034 | $164,444 | 7,642 | $589,264 |
| Jan. 1-Oct. 30, 1981 | 118,722 | 8,117,381 | 90,986 | 6,295,313 | 14,263 | 989,902 | 5,478 | 106,358 | 753 | 131,955 | 6,787 | 593,568 |
|  | Disability beneficiaries[8] |  |  |  |  |  |  |  |  |  |  |  |
| 1980 | 17,830 | $1,682,350 | 12,344 | $837,475 | 3,263 | $414,561 | 609 | $12,266 | 93 | $16,149 | 1,353 | $375,417 |
| Jan. 1-Oct. 30, 1981 | 15,728 | 1,569,550 | 10,797 | 790,266 | 2,819 | 372,723 | 570 | 12,400 | 66 | 12,757 | 1,287 | 354,176 |

[1] Includes only those bills for which reimbursements were made by carriers or intermediaries and that were recorded in the Social Security Administration central records before October 31, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Includes in total, but not shown separately, are data for which type of service is unknown.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before January 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the supplementary medical insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes bills for (a) ancillary and other miscellaneous SMI services provided by hospitals, skilled-nursing facilities, and home health agencies; (b) chronic renal dialysis services furnished by limited care facilities; (c) hospital based physicians' services with charges calculated on a per diem rate; and (d) supplier (other than independent laboratory) services.

[6] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to supplementary medical insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[7] Includes a relatively small number of persons aged 65 and over entitled to supplementary medical insurance benefits solely because of chronic renal disease.

[8] Includes a relatively small number of persons under age 65 entitled to supplementary medical insurance benefits solely because of chronic renal disease.

## Table Q-21.—Medicare supplementary medical insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of October 31, 1981 [1]

[In thousands, except percents]

| Calendar year recorded [2] | Total physicians' bills | | | | Surgical bills | | | | Medical bills | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Number | Allowed charges [3] | Amount reimbursed [4] | | Number | Allowed charges [3] | Amount reimbursed [4] | | Number | Allowed charges [3] | Amount reimbursed [4] | |
| | | | Total | Percent of allowed charges | | | Total | Percent of allowed charges | | | Total | Percent of allowed charges |
| | Total [5] | | | | | | | | | | | |
| 1974 | 54,190 | $3,626,579 | $2,675,850 | 73.8 | 8,265 | $1,523,903 | $1,158,036 | 76.0 | 45,926 | $2,102,675 | $1,517,814 | 72.2 |

[1] Includes only those bills for which reimbursements were made by carriers and that were recorded in the Social Security Administration central records before October 31, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Represents allowed charges as determined by the carriers on the basis of customary charges for similar services generally made by the physician or supplier of covered services and also on prevailing charges in the locality for similar services.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before January 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the supplementary medical insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to supplementary medical insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to supplementary medical insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to supplementary medical insurance benefits solely because of chronic renal disease.

## SSI Quarterly Data

Tables Q-22-32 present data on the number of persons who received federally administered Supplemental Security Income (SSI) payments at the end of the quarter and the average monthly amount of these payments. Those receiving Federal SSI payments and/or federally administered State supplementary payments are included. Emergency advance payments are not included; adjustments have not been made for overpayment refunds, returned checks, and special disbursements for underpayments. The data in the tables are estimated on the basis of the figures for the last month of the quarter.

Tables Q-33-37 present data on the number of persons who received Federal SSI payments and/or State-administered State supplementary payments in States with State-administered State supplementation programs. The data reported represent figures for the last month of the quarter.

**Table Q-22.**—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and average monthly amount by reason for eligibility and type of payment, December 1981

| Type of payment | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| | Number of persons | | | |
| Total | 4,018,875 | 1,678,090 | [1] 78,570 | [2] 2,262,215 |
| Federal SSI payments [3] | 3,590,103 | 1,429,871 | 69,261 | 2,090,971 |
| Federal SSI payments only | 2,393,596 | 1,028,332 | 42,243 | 1,323,021 |
| Federal SSI and State supplementation | 1,196,507 | 401,539 | 27,018 | 767,950 |
| State supplementation [4] | 1,625,279 | 649,758 | 36,327 | 939,194 |
| State supplementation only | 428,772 | 248,219 | 9,309 | 171,244 |
| | Amount of payments (in thousands) | | | |
| Total | $734,399 | $231,274 | $17,891 | $485,235 |
| Federal SSI payments | 575,472 | 169,076 | 12,975 | 393,421 |
| State supplementation | 158,927 | 62,197 | 4,916 | 91,814 |
| | Average monthly amount | | | |
| Total | $182.73 | $137.81 | $227.70 | $214.49 |
| Federal SSI payments | 160.29 | 118.24 | 187.33 | 188.15 |
| State supplementation | 97.78 | 95.72 | 135.32 | 97.75 |

[1] Includes approximately 24,000 persons aged 65 and over.

[2] Included approximately 419,000 persons aged 65 and over.

[3] Includes persons with Federal SSI payments only, and Federal SSI and federally administered State supplementation, data partly estimated.

[4] Includes persons with federally administered State supplementation only, and Federal SSI and federally administered State supplementation, data partly estimated.

**Table Q-23.**—Supplemental Security Income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility, race, and sex, December 1981

| Race and sex | Total | Aged | Blind | Disabled |

[1] Includes data not distributed by reason for eligibility.

[2] Represents March 1980 data for Alaska, September 1981 data for Minnesota and July 1981 data for Oklahoma; data not available for December 1981.

[3] Data not available.

[4] Includes data for the blind.

## Table Q-36.—Supplemental Security Income for the aged, blind, and disabled: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, December 1981

[In thousands]

| State | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| Total [1] | [2] $218,507 | $72,473 | $4,662 | $141,225 |
| Alabama | 19,750 | 8,692 | 370 | 10,688 |
| Alaska [3] | 692 | 212 | 15 | 465 |
| Arizona | 5,313 | 1,542 | 123 | 3,648 |
| Colorado | 7,791 | 4,050 | 70 | 3,671 |
| Connecticut | 5,826 | 1,618 | 89 | 4,119 |
| Florida [1] | 29,973 | 12,508 | 546 | 16,919 |
| Idaho | 1,425 | 341 | 24 | 1,060 |

[1] Represents March 1980 data for Alaska, September 1981 data for Minnesota and July 1981 data for Oklahoma; data not available for December 1981.

[2] Not computed on base of less than $500.

[3] Data not available.

[4] Includes data for the blind.

[5] No persons receiving State supplementation only.

[6] Includes data not distributed by reason for eligibility.

[7] No persons receiving SSI and State supplementation.

[8] Excludes data for optional supplementation; data not available.

## Table Q-38.—Black lung benefits to miners and their spouses and children: Number and monthly amount in current-payment status, by State, December 1981 [1]

| State | Number | | | | Monthly amount | | |
|---|---|---|---|---|---|---|---|
| | Total | Miners | Widows | Spouses and children | Total | Miners | Widows |
| December, total: | | | | | | | |
| 1970 | 111,976 | 43,921 | 24,889 | 43,166 | $12,515,000 | $8,785,000 | $3,730,000 |

Social Security Bulletin
Annual Statistical Supplement, 1981
U.S. Department of Health and Human Services
Social Security Administration

- Each month the **Social Security Bulletin** reports the current outlook for the Old-Age, Survivors, and Disability Insurance program.
- This is a landmark year for Social Security: the National Commission on Social Security Reform is seeking solutions to program financing problems. The **Bulletin** will keep you up-to-date on Commission findings.
- The **Bulletin** also presents in-depth research data on such programs as Aid to Families with Dependent Children, Supplemental Security Income, and Medicare.
- Subscribe today to the Social Security Administration's official research journal. You'll get the next 12 monthly **Bulletins** and receive *free* the **Annual Statistical Supplement**, a major reference volume of nearly 200 tables that also includes a detailed section on Social Security history and development.
- Use the convenient order form below:

24 Monthly Tables

The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939-48 were published in the **Social Security Yearbooks** and, beginning with data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949-54 were included in the September **Bulletin**, 1950-55; beginning with 1955 data, the **Supplement** is a separate publication.) Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration.

The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publications Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin**.

Price: $22.00 a year in the United States and $27.50 in all other countries; single copies, $3.50 domestic and $4.40 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.90 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget.

## Secretary's Report to Congress on Payments to Deceased Beneficiaries

The principal purpose of Public Law 97-123 (enacted on December 29, 1981) was to restore the Social Security minimum benefit to beneficiaries eligible for it before January 1982. That legislation, however, also directed the Secretary of Health and Human Services (HHS) to report to Congress within 90 days on actions being taken to prevent the payment of Old-Age and Survivors Insurance benefits to deceased individuals. In response to this mandate, Secretary Richard S. Schweiker recently released a report (summarized below) outlining HHS activity in this area, including, as required by Congress, the use of death records available under the Medicare program.

In the summer of 1981, HHS's Office of the Inspector General matched the Health Care Financing Administration's (HCFA) file of death reports from providers of health care with the Social Security Administration's (SSA) master beneficiary record (MBR). The comparison revealed that 7,958 of the approximately 20 million beneficiaries reported by HCFA to have died during the 15-year history of the Medicare program were—according to the MBR—alive and had benefits in current-payment status in March 1981.

Subsequent investigations have determined that 2,105 of these beneficiaries are in fact alive (and HCFA records have been corrected); death has been established in 4,738 cases. The remaining cases are still being investigated, and the analysis is expected to be completed later this year. Benefits have been suspended for those persons whose death has been established except for a few cases where suspension might hinder investigation and possible criminal prosecution.

According to Secretary Schweiker, the investigation has not provided definitive information as to why the beneficiary deaths were not reported to SSA. Data obtained in the study, however, do shed some light on how these deaths went undetected.

—About 50 percent of the cases in which death was established involved worker beneficiaries (as opposed to auxiliary or survivor beneficiaries) and thus should have generated a report from a funeral director because a lump-sum death benefit was payable.

—Approximately 20 percent of the cases involved husband and wife combined-check situations where one spouse died and the other continued to negotiate the checks.

—About 45 percent of the cases involved the direct deposit procedure. This mechanism, which allows the automatic deposit of benefits in a shared account, creates the potential for confusion or dishonesty on the part of the surviving accountholder because that person can draw on funds following the death of the beneficiary without making a fraudulent endorsement.

In the report, the Secretary also described steps being taken to assure that payments will not be made to deceased beneficiaries in the future. An ongoing death-records matching procedure compares Social Security benefit records with all deaths reported to HCFA since the initial match conducted in 1981. However, because about a fourth of all Social Security beneficiaries are not covered by Medicare (those who retire before age 65, for example) and only about half of all deaths occur in hospitals where they can be picked up by the HCFA match, other mechanisms must be used to aid in the detection of unreported deaths.

—Other Federal programs whose beneficiaries also receive Social Security benefits could provide an important source of death information. For example, computer matching operations between SSA and the Veterans' Administration, the Office of Personnel Management, and the Railroad Retirement Board have existed for a number of years. Although these mechanisms were established primarily as a means of detecting unreported income going to Supplemental Security Income (SSI) recipients, death indicators are included in the information supplied. Some refinement in the current reporting mechanism is planned so that the information will be usable in an ongoing death-records match.

—Later this year, SSA hopes to expand the matching operations to include Department of Defense data, which would provide death information about all military retirees.

—Also being explored is the feasibility of establishing a pilot death-record matching operation with a limited number of State vital statistics offices. This operation would identify situations in which the death of a recipient of an SSA-administered benefit, especially an SSI or black lung payment, is not recorded in SSA's files.

The National Center for Health Statistics (NCHS) maintains the National Death Index based on records supplied by State bureaus of vital statistics. The Index was designed to facilitate research such as that conducted by the National Cancer Institute. Although interest has been expressed in the possibility of SSA's using this Index, current contracts with the States preclude NCHS from giving SSA access to these files for program purposes.

The report notes that, as of February 1, 1982, SSA had recovered $4.8 million of the $30.4 million in erroneous payments thus far substantiated in the HCFA-SSA data match and subsequent investigations. In 20 percent of the cases involving a deceased beneficiary, all or nearly all of the outstanding checks have been returned to SSA.

## Program Operations

### OASDI Benefits

In March 1982, monthly cash benefits were awarded to 354,609 persons under the Old-Age, Survivors, and Disability Insurance (OASDI) program. Thirty-nine percent of these awards were to retired workers and 8 percent to disabled workers. Eighty-seven percent of all awards and 83 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $352.27 for retired workers and $415.83 for disabled workers.

At the end of March 1982, 36,161,249 beneficiaries under the OASDI program were receiving $12.3 billion—an increase of 315,000 in the number of beneficiaries and $1.5 billion in monthly benefits since March 1981. The OASI program accounted for 96 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 20,371,193, or 56 percent of the total number of OASDI beneficiaries.

During the 12-month period ended March 1982, the total monthly amount paid for OASI and DI benefits rose 15 percent and 5 percent, respectively. The number of OASI beneficiaries increased 2 percent, while the number of DI beneficiaries decreased 7 percent.

Average monthly benefit amounts payable in March 1982 to retired and disabled workers were $387.08 and $412.42, respectively. A year earlier, average benefits were $343.47 for retired workers and $371.26 for disabled workers.

### SSI Payments

**Federally administered payments.** In March 1982, 3,998,000 persons received federally administered Supplemental Security Income (SSI) payments, a decline of 1,700 from February. The number of disabled recipients increased by 5,700 to 2,264,300, while the aged caseload dropped by 7,500 to 1,655,200. Blind recipients remained at 78,500. Among individual States, 29 out of 51 reported a rise in their overall SSI caseload. The number of disabled recipients rose in 49 States, blind in 33, and aged in four.

Federally administered payments in March totaled $738.6 million, up $15 million from the previous month. Federal SSI payments of $579.5 million and State supplementation payments of $159.1 million rose by $12.4 million and $2.6 million respectively.

On July 1, 1982, an automatic cost-of-living increase raised Federal SSI benefit rates by 7.4 percent. The maximum monthly payment to eligible persons living in their own household and without other countable income is now $284.30 for individuals and $426.40 for couples. Individuals and couples living in another's household now receive maximum payments of $189.54 and $284.27, respectively. For recipients in Medicaid institutions, the monthly payment continues at $25.00.

**State-administered supplementary payments.** During January 1982, the number of persons receiving State-administered supplementation continued to decline, dropping to 248,200. The amount expended for these supplements rose from $20.0 million in December to $20.6 million in January. Two States—Colorado and North Carolina—accounted for most of this monthly increase. Effective January 1, 1982, Colorado had a cost-of-living adjustment in its supplementary payment standards that averaged $11 per recipient, and North Carolina raised its payment standards to $30 per month for all persons in rest homes and domicilary care facilities.

# SSI: Trends and Changes, 1974–80

by Lenna Kennedy*

**By the end of 1980, the Supplemental Security Income (SSI) program was making monthly cash assistance payments, averaging $170, to almost 4.2 million aged, blind, and disabled persons. When SSI payments began in January 1974, the number of recipients was 3.2 million and the average payment was $117. Since 1975, both SSI payments and Social Security benefits have been automatically adjusted each year to correspond with increases in the Consumer Price Index. A number of other trends in addition to growth can be discerned in the size of the population served, as well as in their categorical, geographic, and age distributions. This article discusses some of these trends and changes, using program data for the end of each calendar year through 1980. It also presents a brief summary of the program at the end of that period.**

The Supplemental Security Income (SSI) program provides cash assistance to residents of the 50 States, the District of Columbia, and the Northern Mariana Islands who are categorically eligible—aged 65 and older, blind, or disabled—and whose income and resources are within the limitations imposed by law and regulations. The maximum Federal SSI payment, originally $140[1] per month for an individual without countable income and $210 for a couple, had risen by mid-1980 to $238 for an individual and $357 for a couple (table 1). Since 1975 the automatic cost-of-living increase in Social Security (OASDI—Old-Age, Survivors, and Disability Insurance) benefits has been applicable to Federal SSI payments also. The actual amount payable depends on individual circumstances including marital status, living arrangement, and income after exclusions.[2]

In addition to the Federal payment, the law provides for State supplementary payments, which may be made to all or to selected groups of recipients. At the end of 1980, all jurisdictions except Texas and the Northern Mariana Islands were making some supplementary payments. The amount of these supplementary payments differed from State to State. In addition, payments within a State varied depending on criteria such as special living arrangements—for instance, a recipient sharing an apartment or living in a domiciliary care facility. A few States also made higher supplementary payments to persons residing in metropolitan areas.

Although SSI has been affected by a number of legislative changes, the program has experienced little net expansion since its beginning. Under Public Law 92-603 (October 1972) the recipients of the existing Federal-State programs of Old-Age Assistance (OAA), Aid to the Blind (AB), and Aid to the Permanently and Totally Disabled (APTD) were transferred to the Federal rolls. Eligibility was extended to disabled persons under age

**Table 1.**—Federal SSI benefit rates applicable to individuals and couples living in their own household, 1974–80[1]

| July 1980 | 238.00 | 357.00 |

[1] Latest data available are for July 1981: Individual, $264.70; couple, $397.

---

* Division of Supplemental Security Studies, Office of Research and Statistics, Office of Policy, Social Security Administration.

[1] Payments in January 1974 were based on a Federal benefit rate of $130 because the increase to $140 was enacted December 31, 1973, too late to be implemented. Retroactive payments covering the difference were made in February 1974.

[2] For the exclusions from income and resources and a detailed history of program provisions, see **Social Security Bulletin, Annual Statistical Supplement, 1980**, pages 43–46.

18 who had not been covered under APTD. The first SSI payments were made on January 1, 1974.

Even before payments began, it was recognized that the Federal SSI payment level would mean a loss of income to some recipients whose State payments had been higher. In July 1973, Public Law 93-66 assured these persons against such a loss by requiring that the State supplement their Federal payment by the amount necessary to maintain the person's December 1973 income (assistance payments plus other income). This provision is known as the "mandatory supplementation" requirement.

Subsequent program changes included the exclusion of the recipient's home from countable resources (Public Law 94-569, October 1976), and the extension of the SSI program to residents of the Northern Mariana Islands (1978). This extension was part of a covenant that established the Commonwealth of the Northern Marianas. In Guam, Puerto Rico, and the Virgin Islands, the Federal-State assistance programs have continued to operate.

## Overview of the Caseload

The first 2 years of the SSI program were characterized by substantial month-to-month growth in the number of recipients. More than 3.2 million people received payments in January 1974. By the end of that year the number had grown to 4 million, and by December 1975,

[4] All persons with State-administered State supplementation whether receiving State supplementary payments only or both Federal SSI and State-administered State supplementation.

to 4.3 million (table 2).[3] Beginning in 1976, the pattern reversed, and for the next 5 years the total dropped slowly but unevenly, until in December 1980 the number of recipients was 4.2 million. Thus the program experienced a swift increase of 34 percent, followed by a slower, more sustained decline, which after 5 years totaled 4 percent.

The fall in the total caseload masks other changes of different directions and magnitudes that appear when the caseloads for recipients are examined by reason for eligibility. In the following discussion it is important to note that the SSI classifications "aged," "blind," and "disabled" are based on the reason for the individual's initial eligibility. The SSI program does not reclassify "blind" and "disabled" recipients as "aged" at age 65.

In January 1974, the number of aged recipients—those whose eligibility is based on age and financial need—was almost 1.9 million. By the end of 1975, this number had increased by 23 percent to over 2.3 million. In 1976 a decline began, even sharper than that evident in the total caseload. By December 1980, "aged" recipients totaled 1.8 million, a drop of more than one-fifth.

In contrast, the number of persons whose eligibility was based on blindness or disability increased from 1974 to 1980.[4] The number of blind recipients rose from just under 74,000 in January 1974 to 79,000 by the end of 1980 (7.2 percent). However, the most significant growth in the SSI program in this period was among those whose eligibility was based on disability. In December 1973, 1.3 million persons received APTD payments. The first 12 months of SSI produced a net increase of 28 percent, to 1.6 million disabled recipients. This was followed by another 19-percent increase during 1975 and smaller gains in succeeding years. By December 1980, there were more than 2,276,000 disabled recipients, of whom 222,000 were children, either under age 18 or between ages 18 and 22 if students.

When the caseload is distributed by age, it becomes apparent that the proportion of the SSI population aged 65 or older has declined—from 61 percent in January 1974 to 54 percent in December 1980 (table 3). Within this group, those classified as blind or disabled have increased from 87,000 to 419,000 (or from 3 percent to 10 percent of the total caseload).

There was has been little change, however, in the proportion of blind and disabled adults aged 22-64. It remained almost constant (37-39 percent) over the 7 years. These figures may reflect the same stability in the proportion of the general population who meet both the definition of disability and the income and resources criteria of the SSI program.

The segment of the population that showed the greatest increase was "blind and disabled children." Since the APTD programs did not provide for payments to persons under age 18, there were few children transferred to the SSI program in January 1974. However,

[2] Not available separately for January 1974. Adults under age 22 are included with blind and disabled adults aged 22-64.

---

[3] The peak caseload occurred in April 1976, when 4.4 million persons received payments.

[4] The definitions of "blind" and "disabled" for SSI purposes are the same as those used for the Social Security Disability Insurance program. Determinations of disability are also made by the States' disability determination services.

the number increased dramatically in the first 2 years, to 128,000 in December 1975. Subsequent growth was smaller but continuous, and by the end of 1980, the total was 229,000. About one-sixth of these were 18–22 years old and eligible based on their status as students.

## Amount of Payments

In 1974, annual payments under the SSI program totaled $5.2 billion. By 1980, this amount had increased to more than $7.9 billion (table 4). The growth was not uniform and reflects both the caseload changes described above and increases in the level of the Federal benefit rate shown in table 1. After an initial 12-percent rise from 1974 to 1975 (coinciding with the large increase in the number of recipients), the annual growth in the 1976–78 period was 3–4 percent. The larger proportional increases in 1979 and 1980 occurred despite a declining caseload and reflect, in large part, the sizable cost-of-living raises in those years.

Federal SSI payments as a proportion of total SSI payments remained essentially stable over the 7-year period, 73–75 percent. Among the aged it was 68–71 percent, and among the blind and disabled, 75–77 percent.[5]

The average payment under the SSI program, including both Federal payments and federally administered State supplementation payments, increased significantly during this time, from $117 to $170 (table 5). However, because of the variations in coverage and payments under State supplementation plans, it may be more useful to consider the change in Federal SSI payments separately.

Over the 7 years, the maximum possible payment—

1 The December 1979 total and federally administered figures, which are so much larger than those for either the preceding or the following year, represent the payment in that month of large retroactive amounts by a number of States.

---

[5] This figure does not include the Federal contribution to State supplementation or the "hold harmless" payment, which is discussed under "State Supplementation Programs."

the Federal benefit rate for an individual without countable income and living in his or her own household—rose by 70 percent from $140 to $238 per month. Given this increase in the standard, it would have been surprising if the average payments had not risen substantially, which, in fact, they did. For the entire group, the average Federal payment increased by 63 percent ($55) from January 1974 to December 1980. By eligibility category, the increase in the average payment to the aged category was smaller—43 percent ($32), than among the blind—62 percent ($64), or the disabled—60 percent ($63).

The amount of an individual's SSI payment is determined by marital status, living arrangement, and countable income. Although the changes in the Federal payment described above reflect changes in the caseload mix of all of these characteristics, the most significant change is in countable income, particularly the increase in the amount of Old-Age, Survivors, and Disability Insurance (OASDI) benefits received by SSI recipients.

The proportion of the SSI caseload also receiving an OASDI benefit has not changed appreciably; it was 53 percent in December 1975 and 51 percent in December 1980. The average amount of the Social Security benefit received by those entitled under both programs has risen from $130 to $197. Since the exclusion applicable to unearned income has remained the same—$20 per month—SSI is now counting a higher proportion of the OASDI benefit than previously. This would have a greater effect on the payments to the aged category, 70 percent of whom received Social Security benefits in addition to SSI.

## State Supplementation Programs

All States but one provide, to at least some of their residents, additional monies to augment the Federal SSI payment.[6] These amounts may reflect either the optional supplementation provisions of the original law or the mandatory supplementation requirement of Public Law 93-66. The number of persons receiving mandatory supplementation declined sharply, from 95,000 in mid-1977 (the first year for which figures are available) to 20,000 in mid-1980. This figure represents only about 1 percent of all supplementation cases.

Coverage under optional State plans, on the other hand, may be generally applicable to persons living in their own households or limited to selected groups, such as to persons in domiciliary care facilities. In addition, the States may either administer the payments themselves or contract with the Social Security Administration (SSA) to do this. In the latter case, SSA assumes the administrative costs and is reimbursed by the States for the amount of the payments.

Initially, 33 States and the District of Columbia made optional supplementation payments. Some States have since made changes, in either the level of payments or criteria for eligibility. By the end of 1980, 42 States and the District of Columbia were making optional payments. Twenty-six States and the District of Columbia were using the SSA administrative mechanism.[7]

In January 1974, more than 1.8 million persons received State supplements. This number showed an uneven pattern of large initial growth with a decline of 75,000 during 1976,[8] and a smaller decrease of 7,000 during 1980. The latter was due to the continuing drop in the State-administered program. The federally administered caseload grew from 1.5 million in 1974 to almost 1.7 million by 1975, and since then it has fluctuated around that level.

However, payments to persons receiving only a State supplement continued to grow after 1975. These supplements are made to persons with income too high to allow them to receive a Federal payment, but still within the limits of the State plan. The number of "supplementation only" cases under Federal administration increased from 260,000 to 460,000, and under State-administered plans from 33,000 to 52,000.

Annual supplementary payments have increased from $1.3 billion to $1.8 billion for federally administered programs, and from $149 million to $226 million for the State administered. Although payments rose in each eligibility category over time, the largest change was in payments to the disabled.

As previously mentioned, some part of the federally administered supplementation is reimbursed to the States by the Federal Government under the hold-harmless provision. The original SSI law provided that, where a State chose Federal administration of supplementation, its financial liability for the cost of supplementary payments was limited to the non-Federal share of its OAA, AB, and APTD programs in 1972. Table 6 shows the amount of reimbursements under this provision. Six States received hold-harmless payments for fiscal year 1974, but by fiscal year 1976, the provision was no longer applicable in California, Nevada, and New York. For the remaining three States, payments decreased through 1976, then rose again after Public Law 94-585 (October 1976) required States to pass along the annual increases in Federal SSI payments.

The average State supplementation payment of both types increased over the period in response to changes

---

[6] Texas does not make supplementary payments because of a State constitutional barrier.

[7] Sue C. Hawkins, "SSI: Trends in State Supplementation, 1974-78," **Social Security Bulletin**, July 1980, pages 19-27.

[8] Public Law 94-585 (1976) mandated the States to pass on to their supplementation recipients the cost-of-living increase in the Federal payment (effective with the July 1977 Federal increase).

[2] Amount of contribution: $33,100.

both in caseloads and in the State plans (table 5). This rise was greater in the State-administered program.

## Program Status, 1980

Tables 7, 8, and 9 present the standing of the SSI program on a State-by-State basis at the end of 1980, in terms of the number of recipients and total and average payments.[9] California, with just over 10 percent of the Nation's population in 1980, had 17 percent of the total SSI caseload at the end of that year, 12 percent of all those receiving Federal SSI payments, and 36 percent of all those receiving supplementation payments. It also accounted for the highest share of 1980 expenditures—one-fourth of the total, 13 percent of Federal dollars, and almost three-fifths of State supplementation (table 8).

At the end of 1980, payment levels in California (Federal SSI plus State supplementation, for those without countable income) ranged from $402 per month for individuals living independently, to $454 per month for those residing in facilities providing nonmedical board and care. In the same month, the Federal SSI maximum was $238.

The impact of State supplementation and the interaction between the Federal and State programs, especially in California, can be seen in table 9, which shows the average payments at the end of 1980. The average payment in California was $253, almost half again as high as the national average of $170. The next highest State was New York with $190. In terms of the Federal payment, California's average was $155, higher than the national figure of $143, but lower than in six other States. However, the State supplement—averaging $165 to more than 700,000 persons—raised the State average substantially.

The singular position of California in the SSI program does not reflect only the changes in the age and geographic distribution of the population. Between 1974 and 1980 the U.S. population over age 65 increased from 21.8 million to 25.5 million. California's share of this population grew from 9.1 percent to 9.5 percent.

[1] Includes 73 persons for whom State was unknown.

[2] Data not available.

Florida and Texas experienced even higher proportional increases in their aged populations. Among SSI recipients over age 65, however, the proportion in California rose from 14 percent in 1974 to 18 percent in 1980, while the proportion in Florida rose by a smaller amount, and the proportion in Texas fell (table 10).

In addition, the proportion of the over-age-65 population receiving SSI payments has declined from 10.5 percent in 1974 to 8.7 percent in 1980. Only two jurisdictions showed an increase—the District of Columbia and California.

The level of supplementation payments in California has had a pronounced impact on the size of its own SSI caseload, and, by extension, on the national program as well. For instance, California received 63 percent of all federally administered State supplementation only payments.

## Summary

The first 7 years of the Supplemental Security Income program were characterized by both overall growth and internal change. The initial caseload of 3.2 million persons rose in 2 years to almost 4.4 million, and then fell slowly to 4.2 million by the end of 1980. This decline reflected a decrease in the number of persons eligible based on age, while the number of blind and disabled recipients, particularly children, continued to increase. Total payments grew steadily from $5.2 billion in 1974 to $7.9 billion in 1980, and the average payment rose from $117 to $170 during the same period.

# Distribution of Family Income: Improved Estimates

by Daniel B. Radner *

This article describes the results of research to improve estimates of the distribution of family income. In this research, a microdata file was constructed for 1972 using several data sources. The data obtained from these sources were combined and adjusted to produce more precise estimates. Current Population Survey estimates were then evaluated using these improved estimates. Using the improved estimates increased 1972 mean income for all units by 11 percent. The income share of the top 5 percent of the distribution increased substantially. Property income increased and wage and salary income decreased in relative importance. The mean income of family units headed by persons aged 65 or older increased by about 40 percent, by far the largest rise for any group examined; the increase was far lower for low-income family units in that age group. A simple update of mean incomes to 1979 showed no substantial changes from the 1972 pattern of adjustments.

The most important source of data on the distribution of income has been the Current Population Survey (CPS), a household survey conducted by the Bureau of the Census. Income data from household surveys, however, contain substantial response error (the respondents do not know, remember incorrectly, or refuse to answer).[1] These errors usually produce underestimates of average income for all units surveyed, and distort the relative income positions of various socioeconomic groups.

In the mid-1970's the Office of Research and Statistics began a program of research to improve income data bases, using the CPS. In part, this work was a cooperative undertaking with the Bureau of the Census and the Bureau of Economic Analysis, Department of Commerce. In this research a microdata file was constructed for 1972 using several data sources—the CPS, Social Security records, and Federal individual income tax returns.[2] The data obtained from these sources were combined and adjusted to produce more precise estimates. The CPS estimates were then evaluated using these improved estimates.

The goals of this research were

- To assess the size and nature of the errors in CPS income data, both for total income and for specific types of income.
- To construct improved estimates of the distribution of income for 1 year, 1972.
- To examine how improving the estimates of income affects the income of different groups, such as the aged.

This article reports on the results of this research, with the emphasis on the improved estimates for 1972 and the effects of the improvements on estimated income for different groups. In addition, a crude method for adjusting CPS mean incomes for more recent years, which was developed in the course of this research, is applied to CPS data for 1979.

The principal effects of moving from the CPS estimates to the improved estimates were

- Mean income for all units increased 11 percent; mean income increased for all parts of the distribution.
- The income share of the top 5 percent of the distribution increased substantially.
- Property income increased and wage and salary income decreased in relative importance.

---

* Division of Economic Research, Office of Research and Statistics, Office of Policy, Social Security Administration.

[1] Sampling error, of course, can also be important, but this article deals primarily with systematic response error and its effect on CPS estimates.

[2] See the Technical Note for a detailed description of the microdata file and methodology.

- The mean income of family units headed by persons aged 65 or older increased by about 40 percent, by far the largest rise for any group examined; the increase was far lower for low-income family units in that age group.
- A simple update of mean incomes to 1979 showed no substantial changes from the 1972 pattern of adjustments.

## Effects of Adjusted Estimates

This section examines how estimates of the distribution of annual family unit money income are affected by adjusting the income amounts obtained from the Current Population Survey. A family unit is defined here as either (1) a family, a group of two or more persons related by blood, marriage, or adoption and residing together or (2) an unrelated individual, a person 14 years old or over who is not living with any relatives. The income concept used is total money income received in 1972.[3]

One indication of the nature and magnitude of the error in CPS income data is shown in table 1.[4] This table compares CPS income aggregates by type of income with the adjusted income aggregates. Property income increased the most, both as a percent of the CPS aggregate (137 percent) and in terms of aggregate income ($46 billion). Wages and salaries and Social Security and Railroad Retirement benefits increased by the smallest percentage (5 percent). Although the increases in self-employment income and "other" income were large (21 percent and 35 percent, respectively), they were far below the property income increase. In terms of aggregates, wages and salaries increased $28 billion, self-employment rose $13 billion, and other income increased $14 billion. Income from Social Security and Railroad Retirement increased only $2 billion. Thus, property income accounted for 44 percent of the increase in total income, wages and salaries accounted for 27 percent, other income for 14 percent, self-employment income for 13 percent, and Social Security and Railroad Retirement for 2 percent.

### All Family Units

Mean adjusted income for all family units was $12,081, which was 11 percent higher than the CPS mean of $10,853 (table 2). Median income increased 8 percent, from $9,130 to $9,839. The distribution of total income showed increases in the percent of units in all classes above $13,999 and decreases in all (positive) classes below $12,000. The percentage of family units reporting income of $50,000 or more increased roughly 80 percent.

**Table 1.**—Comparison of CPS income totals and adjusted estimates, by type of income, 1972

[Dollars in billions]

| Type of income | Income totals |  | Adjusted ÷ CPS |
|---|---|---|---|
|  | CPS | Adjusted [1] |  |
| Total | $773.0 | $877.2 | 1.13 |
| Wage and salary | 597.2 | 625.6 | 1.05 |
| Self-employment | 64.7 | 78.2 | 1.21 |
| Nonfarm | 54.1 | 60.4 | 1.12 |
| Farm | 10.6 | 17.9 | 1.69 |
| Property [2] | 33.8 | 80.0 | 2.37 |
| Social Security and Railroad Retirement | 37.1 | 39.0 | 1.05 |
| Other | 40.2 | 54.3 | 1.35 |
| Public assistance | 7.7 | 10.7 | 1.39 |
| Other government transfers [3] | 18.5 | 27.8 | 1.50 |
| Private pensions, annuities, and miscellaneous [4] | 14.0 | [5] 15.8 | 1.13 |

[1] These aggregates are equal to the control aggregates except for wage and salary income and Social Security benefits. The adjusted wage and salary aggregate exceeded the control by $4 billion; possible explanations for this excess include inaccuracies in the statistical matching, sampling error, and inaccuracies in the control. The adjusted Social Security benefit aggregate was below the control by $0.7 billion. This difference is probably due to sampling error. The control aggregate for total income is $873.9 billion.

[2] Interest, dividends, rent, royalties, and estate and trust incomes.

[3] Unemployment compensation, workers' compensation, veterans' payments, and government pensions.

[4] Miscellaneous includes alimony, contributions from outside the household, and child support.

[5] Most of the miscellaneous category was not adjusted. Amounts of veterans' life insurance dividends were assigned.

**Source:** CPS data derived from March 1973 CPS. Adjusted data derived from 1972 Statistical Match file.

When family units are ranked by size of total income and separated into percentile groups, the shares of total income received by various percentiles can be tabulated (table 3). Changes in these shares show how the adjustments affected various parts of the distribution. It is important to note that the relative shares of adjusted income shown in this article are based on reranked distributions. Thus, the change in any share reflects reranking of observations as well as adjustment of a specific set of CPS observations.

Changes in the shares also show changes in the inequality of the distribution. For example, a decrease in the share of the bottom 10 percent along with an increase in the share of the top 5 percent and no change in other groups would mean an increase in inequality.

The most important change in income shares was the substantial increase in the share of the top 5 percent. That share rose by 1.9 percentage points, an increase of 11 percent. The bottom two deciles showed no change, the next seven deciles showed increasingly large declines, and the 91st through 95th percentile group

---

[3] For complete definitions and explanation of terms, see Bureau of the Census, "Money Income in 1972 of Families and Persons in the United States," **Current Population Reports** (Series P-60, No. 90), December 1973, page 12.

[4] A minor source of difference between the CPS and adjusted estimates is that the two estimates use different sample weights; the adjusted estimates use sample weights developed for the Exact Match file. (See the Technical Note at the end of this article.)

**Table 2.**—Percentage distribution of total income of all family units, by CPS estimates and adjusted estimates, 1972

| Size of total income | CPS | Adjusted |
|---|---|---|
| Total | 100.0 | 100.0 |
| Negative | .2 | .2 |
| $0 | .8 | .6 |
| $1-$1,999 | 8.2 | 7.2 |
| $2,000-$3,999 | 12.6 | 11.7 |
| $4,000-$5,999 | 11.1 | 10.8 |
| $6,000-$7,999 | 10.7 | 10.2 |
| $8,000-$9,999 | 10.4 | 10.1 |
| $10,000-$11,999 | 9.9 | 9.3 |
| $12,000-$13,999 | 8.5 | 8.5 |
| $14,000-$15,999 | 7.1 | 7.2 |
| $16,000-$17,999 | 5.1 | 5.6 |
| $18,000-$19,999 | 3.9 | 4.3 |
| $20,000-$24,999 | 5.6 | 6.7 |
| $25,000-$29,999 | 2.7 | 3.2 |
| $30,000-$49,999 | 2.5 | 3.4 |
| $50,000 or more | .7 | 1.2 |
| Mean | $10,853 | $12,081 |
| Median | 9,130 | 9,839 |

**Source:** CPS data derived from March 1973 CPS. Adjusted data derived from 1972 Statistical Match file.

showed no change. Thus, the top 5-percent group showed the only increase. Those changes produced an increase in inequality. In general, the top of the distribution showed the largest increase in mean income, the bottom of the distribution showed the next largest increase, and the middle of the distribution showed the smallest increase. The small increase for the middle is explained by that group's heavy reliance on wage and salary income, which is the most accurately reported income type. It should be noted that, despite decreases in income shares for some deciles, the mean income of each decile increased.

The composition of total income by type of income is shown in table 4. Wages and salaries fell as a share of total income in all income classes above $3,999, with a large decrease in the $50,000 or more class. Property income rose in all classes above $3,999, with the share in the top class more than doubled. Those two changes clearly reflect the small overall adjustment to wages and salaries and the large overall adjustment to property income mentioned earlier. The share of income from Social Security and Railroad Retirement fell slightly at the bottom, and rose a small amount elsewhere. The share of other income increased slightly in all classes except $50,000 or more, while the share of self-employment income rose slightly at the bottom and at the top, and in general fell slightly in between.

When the composition by income type of specific parts of the distribution was examined, a large shift toward property income and away from wages and salaries at the top was found. The bottom showed a small

**Table 3.**—Percentage distribution of total income for all family units, 1972

| Percentiles | Income share | |

shift from Social Security and Railroad Retirement to other income, while the middle showed a small shift from wages and salaries that was distributed among all other types of income except self-employment.

## Income by Selected Family Unit Characteristics

**Mean income.** The adjustments to income would be expected to affect different groups differently, at least in part because the composition of income differs among groups. In general, it would be expected that groups that receive mostly wage and salary income would have relatively small increases in mean income, while groups that receive substantial amounts of property income would have relatively large increases.

Mean income increased somewhat more for unrelated individuals than for families—16 percent, compared with 12 percent (table 5).[5] The largest increases by type of family unit and sex were shown by the categories female unrelated individuals (24 percent) and female heads (22 percent), followed by male heads (16 percent). The smallest increases were seen in families headed by husband-wife couples (12 percent) and male unrelated individuals (8 percent). This pattern is generally consistent with the generalization that groups with the least dependence on income from wages show the largest increases and groups with the greatest dependence on wage income show the smallest increases. The mean income for both race groups increased by 12 percent.

**Table 5.**—Mean income of family units, by selected characteristics, 1972

| Characteristic | Mean income |  | Adjusted ÷ CPS |
|---|---|---|---|
|  | CPS | Adjusted |  |
| All family units | $10,853 | $12,081 | 1.11 |
| Type of family unit and sex of head: |  |  |  |
| Families | 12,625 | 14,125 | 1.12 |
| Headed by: |  |  |  |
| Husband-wife couple | 13,477 | 15,061 | 1.12 |
| Men [1] | 11,657 | 13,549 | 1.16 |
| Women [1] | 6,861 | 8,388 | 1.22 |
| Unrelated individuals | 5,138 | 5,983 | 1.16 |
| Men | 6,619 | 7,173 | 1.08 |
| Women | 4,157 | 5,155 | 1.24 |
| Race: |  |  |  |
| White or other than black | 11,282 | 12,622 | 1.12 |
| Black | 7,096 | 7,914 | 1.12 |
| Age of head: |  |  |  |
| 14-24 | 6,439 | 6,097 | .95 |
| 25-34 | 11,078 | 11,094 | 1.00 |
| 35-44 | 13,741 | 14,667 | 1.07 |
| 45-54 | 14,443 | 16,063 | 1.11 |
| 55-64 | 11,681 | 13,496 | 1.16 |
| 65 or older | 6,150 | 8,658 | 1.41 |

[1] No spouse present in household.

**Source:** CPS data derived from March 1973 CPS. Adjusted data derived from 1972 Statistical Match file.

The most striking adjustments to mean income were in age-of-head groups, where a clear pattern emerged: the older the age group, the larger the increase. The oldest group, aged 65 or older, showed by far the largest increase in mean income—41 percent. (The median for the group rose 28 percent.) This increase was more than double the 16-percent increase of the 55-64 age group. The 14-24 age group showed a 5-percent decrease. The decline in the mean for the 14-24 age group was primarily due to reweighting of sample observations, although several incorrect large amounts in the CPS data that apparently resulted from CPS processing errors also played a role. Several of these observations were male unrelated individuals, which helps to explain the small increase for that group.

One way of looking at the differential change by age is to note that the mean for the 14-24 age group fell from 59 percent of the overall mean in the CPS estimates to 50 percent in the adjusted estimates, while the mean for the age 65 or older group rose from 57 percent to 72 percent of the overall mean.

Table 6 presents in more detail the distribution of the large increase of mean income for the aged-65-or-older group. This group showed large differences by decile. The increase in the bottom decile was extremely low because of an increase in negative income.[6] The adjustment rose with each decile, with a sharp rise in the top decile and the top 5 percent. Thus, the adjustment for the aged-65-or-older group was very unequally distributed, with relatively high-income units receiving a far greater adjustment than relatively low-income units.

The size of total income that corresponds to the deciles for the aged-65-or-older group is also shown in table 6. For example, the bottom two deciles, which had relatively low adjustments, consisted of units with CPS income below $2,004. The third decile, which had a moderate adjustment, contained units with CPS income of $2,004-$2,540; and the top decile, which had a very large adjustment, contained units with CPS income of $12,851 or more.

**Income shares.** The general pattern of change in the distribution of income shares is a decrease in the bottom 40 percent share and the next 40 percent, and an increase in the top 20 percent share (table 7).[7] However, several groups showed different patterns. Blacks showed an opposite pattern—an increase in the share of the two bottom 40 percent income classes and a decrease

---

[5] The pattern of change in median incomes for most family groups is similar to the pattern for means, but in general the changes for the medians are not as large as those for the means.

[6] Net losses reported in tax return data are usually larger than negative income reported in survey data. Tax return data replaced survey data for several types of income in constructing the improved estimates, as described in the Technical Note.

[7] It should be noted that a given percentile group represents different income classes for different family groups.

**Table 6.**—Percent change in decile mean income, CPS to adjusted, for family units headed by persons aged 65 or older, 1972

| Percentile | Percent change [1] | Lowest CPS income amount in the percentile group |
|---|---|---|
| Total | 41 | ... |
| 1-10 | 2 | ... |
| 11-20 | 10 | $1,452 |
| 21-30 | 14 | 2,004 |
| 31-40 | 20 | 2,541 |
| 41-50 | 26 | 3,162 |
| 51-60 | 31 | 4,000 |
| 61-70 | 35 | 5,000 |
| 71-80 | 37 | 6,427 |
| 81-90 | 40 | 8,562 |
| 91-100 | 58 | 12,851 |
| 96-100 | 68 | 18,000 |

[1] These percentages are based on a reranked adjusted distribution.

**Source:** Derived from March 1973 CPS and 1972 Statistical Match file.

in the share of the top 20 percent. Male unrelated individuals, the age 14-24 group, and female heads showed increases in the share of the bottom 40 percent. Female heads also showed a decrease in the top 20 percent share. All other groups shown here conformed to the general pattern of change mentioned above, although the size of the change differed among groups. The aged-65-or-older and female unrelated individual groups showed the largest changes in income shares.

**Composition of income by type.** The most important change in composition of income by type was the increase in the importance of property income. As expected, the share of property income rose for all groups that received substantial property income (table 8). The share of wages and salaries fell for all groups, the shares of self-employment and Social Security and Railroad Retirement showed little change for most groups, and the share of other income rose slightly for most groups.

Table 9 presents in more detail the change in the composition of income for family units headed by persons aged 65 or older. Although the mean amounts for all types of income except Social Security and Railroad Retirement increased in moving from the CPS estimates to the adjusted estimates, the size of the increases differed greatly. Mean property income increased 165 percent, self-employment income 43 percent, other income 28 percent, and wages and salaries 22 percent. Income from Social Security and Railroad Retirement decreased 1 percent. This decrease was primarily the result of the reweighting of sample observations. Two-thirds of the increase in total income was from property income, wages and salaries contributed 16 percent, other income 10 percent, and self-employment income 7 percent.

These changes imply changes in the share of total income accounted for by each type of income for the aged-65-or-older group (table 8). Social Security and Railroad Retirement fell from 32 percent of total income to 22 percent, wages and salaries decreased from 30 percent to 26 percent, other money income dropped from 15 percent to 13 percent, while property income rose sharply from 17 percent to 31 percent.

**Table 7.**—Percentage distribution of total income for family units, by selected characteristics, 1972

## Updating Adjusted Mean Incomes

A 1979 estimate of mean income by seven income types for selected family groups was constructed by adjusting the 1979 CPS mean income estimates. The adjustments were done so that the total adjusted amount of each income type (for all units) was equal to the independently derived total. The adjusted mean incomes for each type of income were summed to obtain adjusted total income for selected family groups.

Essentially this updating technique modified the 1972 adjustment results to take into account two factors: (1) Changes between 1972 and 1979 in CPS underreporting of each income type (for all units taken together) and (2) changes between 1972 and 1979 in the composition of income by type for the selected group. Otherwise, the 1972 adjustment percentages were assumed to remain unchanged.

For example, if an income type was reported better in 1979 than in 1972, then the 1979 adjustment of that income type would be lower than the 1972 adjustment. Also, for a selected group, if a relatively well-reported income type was a more important source in 1979 than in 1972, then the adjustment of total income for that group would tend to be lower in 1979 than in 1972. A more detailed description of the updating methodology appears in the Technical Note.

The update of mean incomes shows the same general pattern found in the 1972 estimates (table 10). At first glance, the biggest difference is that the mean income for all family units rose 15 percent in 1979, compared with an 11-percent rise in 1972. However, because of the preliminary nature of the 1979 control aggregates used, this difference may not be significant.[8] The pattern of differential increases among selected family groups for

---

[8] Several differences between the March 1973 CPS and March 1980 CPS could also affect comparisons between the 2 years. One important difference is that the 1979 estimates use characteristics (for example, age) of the "householder," while the 1972 estimates use characteristics of the family head.

**Table 10.**—Mean income of family units, by selected characteristics, 1979

| Characteristic | Mean income |  | Updated adjusted ÷ CPS |
|---|---|---|---|
|  | CPS | Updated adjusted |  |
| All family units | $18,182 | $20,940 | 1.15 |
| Type of family unit and sex of head: |  |  |  |
| Families | 21,873 | 25,212 | 1.15 |
| Headed by: |  |  |  |
| Husband-wife couple | 23,791 | 27,240 | 1.14 |
| Men [1] | 19,580 | 22,720 | 1.16 |
| Women [1] | 11,854 | 14,650 | 1.24 |
| Unrelated individuals | 9,707 | 11,136 | 1.15 |
| Men | 12,029 | 13,010 | 1.08 |
| Women | 7,827 | 9,610 | 1.23 |
| Race: |  |  |  |
| White or other than black | 18,919 | 21,800 | 1.15 |
| Black | 12,158 | 13,910 | 1.14 |
| Age of head: |  |  |  |
| 14-24 | 10,511 | 10,300 | .98 |
| 25-34 | 17,953 | 18,530 | 1.03 |
| 35-44 | 23,220 | 25,670 | 1.11 |
| 45-54 | 24,664 | 28,460 | 1.15 |
| 55-64 | 20,809 | 25,280 | 1.21 |
| 65 or older | 10,837 | 15,860 | 1.46 |

[1] No spouse present in household.

**Source:** CPS data derived from March 1980 CPS. Adjusted data derived from 1972 Statistical Match file.

1979 was similar to the 1972 pattern. Aside from age groups, the categories female heads and female unrelated individuals still showed the largest increases, while male unrelated individuals showed the smallest increases. However, families and unrelated individuals showed the same percentage increase in 1979; the 1972 estimates had shown a higher increase for unrelated individuals.

The increases for age-of-head groups still showed the same pattern—the older the age group, the larger the increase. Although the increase for each age group was slightly higher for 1979 than for 1972, the appropriate conclusion, based on this crude evidence, is that there has been essentially no change in the adjustment by age of head between 1972 and 1979. This means that changes in the overall net underreporting of each income type and changes in the reported composition of total income for each age-of-head group had no significant net effect on the adjustments to mean income between 1972 and 1979.

## Summary

It is well-known that estimates of the size distribution of annual family money income obtained from household surveys contain substantial error, particularly response error. This article has described the effects on estimates of the distribution of family unit money income produced by adjusting Current Population Survey estimates for 1972. Those adjustments were made by combining several other data sources, primarily tax return data, with the CPS data and altering the income estimates on an individual observation basis so that the estimates were consistent with independently derived control totals.

These adjustments produced several important effects. Mean income for all units rose 11 percent. The income share of the top 5 percent increased substantially, while the shares of the 3rd through 9th deciles fell. In general, property income increased and wage and salary income decreased in relative importance. Self-employment income and income from transfer payments other than Social Security and Railroad Retirement also increased somewhat in relative importance.

When the mean incomes of selected family groups were examined, several important shifts were found. The most striking differences were by age of family head. Family units headed by persons aged 65 or older showed a large increase in mean income (41 percent), while units headed by persons aged 14-24 showed a 5-percent decrease. In general, the adjustment rose as age increased. Further examination of the results for the aged-65-or-older group showed that the adjustment was much larger for the higher income units and that the lower deciles of that age group showed only modest increases in mean income. Female unrelated individuals also showed a large increase in mean income; a substantial proportion of that group consisted of persons aged 65 or older. Changes in income shares in general showed a decrease in the bottom 40 percent and the next 40 percent of the distribution, and an increase in the share of the top 20 percent.

A simple update to 1979 of the adjustment of mean incomes of selected family groups showed no significant changes from the 1972 adjustments. The clearest pattern was still that the adjustment increased with the age of the family head, with the aged-65-or-older group showing the largest increase of any of the family groups examined.

Detailed estimates for 1964 based on the March 1965 CPS showed the same general patterns of adjustment for mean incomes as the 1972 detailed estimates and the 1979 update.[9] Thus, the following patterns of adjustment have been stable over time. Mean income rises. In general, groups that do not rely as heavily on wage and salary income and have substantial property income show the largest increases in mean income; groups that rely primarily on wage and salary income show the smallest increases in mean income. This is because ordinarily wage and salary income is reported relatively well and property income is reported relatively poorly.

## Technical Note

### Microdata File, 1972

The adjusted income estimates for 1972 were tabulated from a computer tape file, in which the income estimates were adjusted to be consistent with independently derived control totals.[10] These income totals were derived by the Bureau of Economic Analysis from the National Income and Product Account estimates.

An Exact Match (EM) file was constructed by the Social Security Administration (SSA) and the Bureau of the Census.[11] Persons who responded to the March 1973 Current Population Survey had their survey data matched with their earnings and benefit information in SSA administrative records and with selected items from their 1972 Federal individual income tax returns. These "exact matches" were performed using Social Security numbers, with other personal identifying information for validation. This matching was performed in a way that ensured confidentiality.

In order to add to the information in the Exact Match file, a statistical match was carried out between the Exact Match file and a second file, the Augmentation File (AF), which contained comprehensive, detailed Federal individual income tax return information. In a statistical match, the information brought together from the different files ordinarily is not for the same person, but is for a similar person; the match is made on the basis of similar characteristics. In contrast, in an exact match, the information matched is for the same person.

The starting point for the construction of the Augmentation File was a subsample of the 1972 Statistics of Income (SOI) sample of Federal individual income tax returns. The SOI subsample was then combined with SSA records containing earnings and demographic data in an exact match, using Social Security numbers. The SSA information was added to the Augmentation File primarily to improve the quality of the statistical match between the Exact Match file and Augmentation File that was to follow.

The EM-AF statistical match consisted of three parts, each of which was a statistical match: The initial match, the rematch, and the high-income match. The initial match and rematch were basically similar matches that focused on adding more accurate tax return income data to the Exact Match file. The high-income match was different—it focused on adding more high-income Augmentation File returns to the statistically matched file to improve the estimates for high-income family units. Approximately 42,000 Exact Match records and 95,000 Augmentation File records were used in the overall statistical match. For each Exact Match observation, the Augmentation File was searched for the observation that most closely resembled the Exact Match observation. The similar information compared in carrying out the match included adjusted gross income (AGI), interest, dividends in AGI, Social Security taxable earnings, sex, race, age, number of tax return exemptions, and the presence of various tax return schedules.

After the statistical match was completed, additional steps were performed to make the income estimates conform to the independent control totals. This adjustment to controls included audit correction of tax return income types, addition of recipients for some income types, and inflating of amounts for some income types. Income amounts in the tax return data were adjusted for audit using information from the 1973 Taxpayer Compliance Measurement Program. Even after the audit correction, all income types except wages and salaries fell short of independent control totals. Income types that appeared on tax returns were adjusted by inflating the after-audit amounts (losses were decreased). Simple inflation factors were used for some types of income, while procedures that involved adding a constant term as well as multiplying the amount by a factor were used for other types of income. Most types of transfer income were adjusted to total income and recipient control totals primarily (and for some types exclusively) by adding more recipients.[12]

In the adjusted estimates for filers of tax returns, tax return amounts replaced CPS amounts for wages and salaries, self-employment income, and property income. SSA administrative record amounts were used for Social Security benefits. CPS amounts were used as the basis for all other types of income, including most transfer payments. However, the estimates were adjusted substantially for almost all of the CPS income types used.

### Updating Procedure, 1979

In effect, the 1972 adjustment of a given income type was factored into two parts: (1) A simple inflating to control totals where the percentage increase was the same for all family groups, and (2) based on the 1972 results, an adjustment to the inflated amount that differed by family group. In updating to 1979, the simple inflating was performed (using 1979 factors); then the 1972 final adjustment for the group ((2) above) was applied without change.

In the adjusting procedure, for each of the seven income types for each family group a "simple inflated mean" was constructed by inflating the CPS mean by the ratio of the control total to the CPS total for that income type and year (for all units).[13] An "adjustment factor" was then computed for each income type and family group for 1972 as the ratio of the final 1972 mean to the simple inflated mean for that income type and family group. The adjustment factor was then applied to the 1979 simple inflated mean for the appropriate income type and family group to obtain the preliminary 1979 adjusted mean. The total amount implied by those means was then compared with the 1979 control total for that income type, and the means for all family groups were then adjusted upward or downward by the same percentage so that the control was met. This final step was needed because shifts in the sample weights between 1972 and 1979 for selected family groups meant that the adjustment factors were not constrained to produce the overall control totals.

[11] Beth Kilss and Frederick J. Scheuren, "The 1973 CPS-IRS-SSA Exact Match Study," **Social Security Bulletin**, October 1978, pages 14-22.

[12] For a more detailed description of these adjustments, see Daniel B. Radner, **Adjusted Estimates of the Size Distribution of Family Money Income for 1972**, op. cit.

A simple hypothetical example using one family group (the aged) and one income type (property income) will be used to clarify the procedure. Assume that the 1972 CPS total of property income for all groups was one-half of the control total. This assumption implies an inflating factor of 2.00 to bring the total up to the control. Also assume that 1972 mean CPS property income for the aged was $1,000. The simple inflated 1972 mean was thus $2,000 ($1,000 × 2.00). Assume that the mean from the final 1972 estimate, however, was $2,200. Thus, the adjustment factor would be 1.10 ($2,200 ÷ $2,000). Looking at 1979, assume the CPS mean was $2,500 and the simple inflating factor was 1.80. This implies that the simple inflated mean was $4,500 ($2,500 × 1.80). The preliminary adjusted mean was then $4,950 ($4,500 × 1.10). Assume that the total amount implied by the preliminary adjusted means was 1.03 times the control total. The preliminary adjusted mean would then be divided by 1.03 to obtain the final adjusted 1979 mean. Thus, the final adjusted mean would be $4,806 ($4,950 ÷ 1.03).

---

[13] The seven income types were wages and salaries, nonfarm self-employment, farm self-employment, property, Social Security and Railroad Retirement benefits, public assistance, and all other types.

# Notes and Brief Reports

## Foreign-Born Workers Awarded Retirement and Disability Benefits, 1978

A recently developed study file has enabled the Social Security Administration to examine the experience of foreign-born workers who were living in the United States at the time they began collecting benefits under the Old-Age, Survivors, and Disability Insurance program. Of the 1.9 million persons awarded retired-worker and disabled-worker benefits in 1978, about 88,000 were born outside the United States. They made up less than 5 percent of persons awarded retired-worker benefits (table 1) and about 4 percent of all disabled-worker allowances (table 2). Most of the foreign-born awardees had worked in Social Security covered employment since before 1960.

Data in the study file—a 4-percent sample of awards to retired and disabled workers in 1978—showed that, on the average, foreign-born beneficiaries were older than others at the time of award. The retired workers among them had higher average primary insurance amounts (PIA's)[1] than did retired workers in general; a larger proportion of them were in the highest PIA category. Among disabled workers, the foreign born had lower PIA's and fewer were in the highest PIA group.

The study file has been used to produce a 12-page report (with 20 detailed tables) on the status of foreign-born workers awarded retirement and disability benefits. Data are presented for all foreign-born retired and disabled workers. In most cases, data are also presented for those of European birth and for those born in Spanish-language countries. (The latter group includes persons born in Puerto Rico, who are U.S. citizens by birth, but who were included with the Spanish-language countries because Spanish is their primary language.) These groups are compared by age, race, and sex, as well as by average PIA and the distribution of their PIA's.

Persons born in Europe made up the majority of the foreign-born awardees. Compared with other foreign-born awardees, they were older at the time of award and received larger benefits. Hispanic workers, on the other hand, were younger than the average, and their benefit amounts were lower.

Further information on this study can be obtained by writing:

---

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

---

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

Source: **Monthly and Final Statement of Receipts and Expenditures of the U.S. Government** and other Treasury reports, unless otherwise noted.

## Table M-5.—Old-age and survivors insurance trust fund: Status, 1950–82

[In thousands. Calendar year and fiscal year data appear in alternate months of the **Bulletin**.]

| Period | Receipts | | | Expenditures | | | | Assets at end of period | | |
|---|---|---|---|---|---|---|---|---|---|---|

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[10] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[11] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

---

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[Data contain some duplication arising from dual entitlement; see the **1980 Annual Statistical Supplement**, p. 9]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–82

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2] [3] | Children [4] | Children [4] | Widowed mothers [5] | Widows and widowers [2] [6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | Average benefits in current-payment status at end of period | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $12.22 | $19.61 | $20.28 | $13.09 | ....... | ....... | ....... | ....... |
| 1950 | 43.86 | 23.60 | 17.05 | 28.43 | 34.24 | 36.54 | 36.69 | ....... | ....... | ....... | ....... |
| 1960 | 74.04 | 38.72 | 28.25 | 51.37 | 59.29 | 57.68 | 60.31 | $89.31 | $34.41 | $30.21 | ....... |
| 1965 | 83.92 | 43.63 | 31.98 | 61.26 | 65.45 | 73.75 | 76.03 | 97.76 | 34.96 | 31.61 | ....... |
| 1970 | 118.10 | 61.19 | 44.85 | 82.23 | 86.51 | 101.71 | 103.21 | 131.29 | 42.55 | 38.63 | $45.22 |
| 1975 | 207.18 | 105.19 | 77.42 | 139.40 | 147.25 | 192.33 | 171.86 | 225.89 | 67.42 | 61.95 | 68.72 |
| 1976 | 224.86 | 114.13 | 87.91 | 152.12 | 159.78 | 207.13 | 185.07 | 245.17 | 72.98 | 68.26 | 73.24 |
| 1977 | 242.98 | 123.07 | 94.85 | 165.68 | 173.69 | 221.95 | 198.30 | 265.19 | 79.10 | 75.23 | 77.69 |
| 1978 | 263.19 | 132.77 | 105.69 | 182.12 | 190.36 | 238.84 | 213.95 | 288.25 | 86.11 | 83.38 | 82.96 |
| 1979 | 294.27 | 148.36 | 119.80 | 205.53 | 212.56 | 266.87 | 238.72 | 322.03 | 96.25 | 95.16 | 91.24 |
| 1980 | 341.41 | 171.95 | 140.49 | 239.52 | 246.20 | 308.12 | 276.07 | 370.74 | 110.48 | 110.30 | 104.41 |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[7] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–82

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement,** p. 9]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

## Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940-82

| Period | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–82

[Number of awards in thousands]

| Period | Retired workers | | | Wives and husbands | | |

| March | 139 | 116 | 83 | 30 | 24 | 80 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| August | 61,021 | 27,254 | 7,711 | 26,056 |
| September | 64,624 | 28,882 | 7,778 | 27,964 |
| October | 66,425 | 29,173 | 7,960 | 29,292 |
| November | 62,982 | 28,124 | 7,745 | 27,113 |
| December | 56,097 | 24,829 | 6,969 | 24,299 |
| 1982 | | | | |
| January | 62,562 | 28,317 | 7,601 | 26,644 |
| February | 56,319 | 24,565 | 6,616 | 25,138 |
| March | 62,803 | 27,593 | 7,464 | 27,746 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, March 1982**

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,998,043 | $738,623 | $579,487 | $159,136 |
| Aged | 1,655,225 | 228,524 | 167,005 | 61,519 |
| Blind | [2] 78,509 | 18,016 | 13,090 | 4,926 |
| Disabled | [3] 2,264,309 | 492,082 | 399,392 | 92,691 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 419,000 persons aged 65 and over.

**Table M-20.—Supplemental Security Income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974-82**

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945-80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to families with dependent children | General assistance | |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968-71.

[2] Includes money payments for medical assistance for the aged for 1960-69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940-81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] |  | Initial claims (weekly average) [4] | All types of compensated unemployment |  |  |  | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
|  | Number of workers [2] | Percent of covered employment [3] |  | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries |  |  |  |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |
| 1945 | 589,110 | 2.1 | 116,325 | 2,861,190 | 24,179,769 | 445,866 | 464,996 | 18.77 | 254,271 | 6,914,009 |

---

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

[9] Preliminary data.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-37.—Unemployment insurance: Selected data by State, August 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent of covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid [4] | Average weekly number of beneficiaries | | |
| Total | 2,656,010 | 3.0 | 374,271 | 717,050 | 9,650,546 | $1,006,611,177 | 2,297,749 | $106.02 | 215,108 |
| Alabama | 44,955 | 3.6 | 7,345 | 14,501 | 165,174 | 12,478,966 | 39,327 | 76.80 | 4,047 |
| Alaska | 7,937 | 5.3 | 1,086 | 2,084 | 33,544 | 4,081,372 | 7,987 | 123.74 | 758 |
| Arizona | 23,525 | 2.4 | 3,277 | 5,683 | 74,425 | 6,342,908 | 17,720 | 85.93 | 1,484 |
| Arkansas | 23,482 | 3.3 | 3,914 | 5,951 | 81,839 | 7,239,659 | 19,485 | 92.18 | 2,283 |

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments, World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the social security program.

## Table M-39.—Civilian population and labor force, 1940-81

---

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## Table M-40.—Consumer Price Index for urban and clerical workers, 1940–81[1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1940 | 42.0 | ......... | 36.8 | 35.2 | 42.8 | 52.4 | 42.7 | 40.2 | 46.1 | 48.3 | 43.6 |

# Author, Title, and Subject Index to the Social Security Bulletin, 1938–79

- History of Social Welfare Expenditures
- Changes in Retired Population
- Relative Health and Welfare of the Aged
- Effects of Benefits for Disabled Workers

Since its inception in 1938, the **Social Security Bulletin** has published continuing analyses of the Old-Age and Survivors Insurance program. It has presented Social Security research on the disabled, the rehabilitation program, public assistance, program financing, Medicare, health insurance, foreign social security developments, and related income-maintenance programs.

This 42-year publishing history is now indexed in one volume, ready for use by researchers, students, policy analysts, reference librarians—anyone with questions on Social Security and related topics.

**Current Operating Statistics:**

18 Monthly Tables

The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939-48 were published in the **Social Security Yearbooks** and, beginning with data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949-54 were included in the September **Bulletin**, 1950-55; beginning with 1955 data, the **Supplement** is a separate publication.) Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration.

The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publications Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin**.

Price: $22.00 a year in the United States and $27.50 in all other countries; single copies, $3.50 domestic and $4.40 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.90 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget.

# Social Security in Review

## SSA's Annual Report to Congress

As required by law, Secretary of Health and Human Services Richard S. Schweiker recently submitted the Social Security Annual Report to the Congress for Fiscal Year 1981. The document presents highlights of the various programs administered or coordinated by the Social Security Administration (SSA)—Social Security, Supplemental Security Income (SSI), Aid to Families with Dependent Children (AFDC), Low Income Home Energy Assistance, and Black Lung—and details changes to the systems brought about by legislation, litigation, and administrative decisions. Program highlights include:

**Social Security program.** About 116 million persons worked in jobs covered by Social Security in 1981. Approximately 95 percent of those currently reaching age 65 are eligible for monthly cash benefits and a similar proportion of children under age 18 and their mothers or fathers will be paid monthly cash benefits if the family breadwinner dies. Four out of 5 workers aged 21-64 can receive monthly cash benefits if they suffer a severe and prolonged disability.

Retirement, survivors, and disability insurance benefits increased by 18 percent, to $136.3 billion, in fiscal year 1981. The number of beneficiaries on the rolls at the end of the year increased by 1.1 percent, to 36.0 million. In 1982, benefits are estimated to increase by 12.1 percent, to $152.7 billion, with the number of beneficiaries increasing by 0.3 percent, to 36.1 million.

The average monthly benefit in September 1982 is estimated to be $405 for a retired worker, $692 for a retired worker with an aged spouse, $925 for a widowed mother with two children, $429 for a disabled worker, and $869 for a disabled worker and family. A year earlier these figures were $375 for a retired worker, $641 for a retired worker and aged spouse, $856 for a widowed mother with two children, $397 for a disabled worker, and $805 for a disabled worker and family.

**Supplemental Security Income.** In fiscal year 1981, Federal SSI benefit payments increased 13.1 percent, to $6.4 billion. Federally administered State supplementation increased by 1.2 percent, to $1.8 billion. A total of 4.0 million persons—down 2.5 percent from 1980—were receiving SSI payments at the end of the year. In 1982, Federal SSI payments will reach an estimated $7 billion, up 11.8 percent. The number of SSI recipients is expected to increase slightly to about 4.1 million.

**Aid to Families with Dependent Children.** AFDC payments (excluding AFDC-Foster Care and including offset for child support enforcement collections) increased in fiscal year 1981 by 13.9 percent, to $12.5 billion, of which about $6.8 billion was the Federal share. An average of 11.1 million persons received monthly AFDC payments, up 5.4 percent from 1980. Payments in 1982 (including offset for child support enforcement collections) are expected to decrease by 3.2 percent, to $12.1 billion, with the Federal share dropping to $6.6 billion. Federal support to the States for program administration is expected to rise from $820 million in 1981 to $907 million in 1982.

**Low Income Home Energy Assistance.** In fiscal year 1981, total funding of $1.85 billion was distributed to States to help low-income households offset the high cost of home energy. Fiscal year 1982 funding of $1.752 billion was authorized by the continuing resolution (Public Law 97-92). An emergency supplemental bill (Public Law 97-147) provided an additional $123 million for the program.

**Black Lung program.** Although responsibility for new Black Lung miner claims shifted to the Department of Labor (DOL) in July 1973, the program continues to be a factor in SSA's disability operations. While DOL administers new claims under Part C of the Federal Coal Mine Health and Safety Act of 1969, SSA is still responsible for administering Part B of the act. As of September 1981, about 381,000 miners and their dependents and survivors were receiving Black Lung benefits. Since 1973, SSA has taken new Black Lung claims for DOL. SSA field offices took 45,171 claims in 1980 and 23,515 in 1981 and transferred them to DOL.

Total outlays in fiscal year 1981 for the Old-Age and Survivors Insurance (OASI) and the Disability Insurance (DI) Trust Funds exceeded total income to these trust funds by $5.0 billion, according to the report. The combined balance in these two trust funds was $27.2 billion on September 30, 1981. The balance was expected to drop to $19.0 billion by September 30, 1982. From October through December 1982, the OASI Trust Fund is expected to borrow $5.7 billion from the DI Trust Fund and any additional amount needed from the Hospital Insurance Trust Fund.

Also noted in the report are the efforts recently directed toward modernizing SSA's data processing systems, reforming the disability insurance program, improving the hearings and appeals process, recovering debts owed to SSA, and reducing fraud, abuse, and waste. Despite these new initiatives, administrative costs remained at 1.3 percent of tax income to the Social Security Trust Funds.

## Program Operations

### OASDI Benefits

At the end of April 1982, the Old-Age, Survivors, and Disability Insurance (OASDI) program was paying $12.3 billion in monthly cash benefits to 36,145,698 beneficiaries—an increase of $1.5 billion in total monthly benefits and 266,000 in the number of beneficiaries since April 1981. The OASI program accounted for 96 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. The number of retired workers reached 20,368,891, or 56 percent, of all OASDI beneficiaries.

During the 12-month period ended April 1982, the monthly amount of OASI and DI benefits rose 15 percent and 5 percent, respectively. The number of OASI beneficiaries increased 2 percent, while the number of DI beneficiaries decreased 7 percent.

Average monthly benefit amounts payable in April 1982 to retired and disabled workers were $387.17 and $412.34, respectively. A year earlier, average benefits were $343.69 for retired workers and $371.37 for disabled workers.

The number of monthly cash benefits awarded in April 1982 was 361,202. Eighty-six percent of all awards and 81 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $349.63 for retired workers and $417.89 for disabled workers.

### SSI Payments

**Federally administered payments.** In April 1982, 3,988,000 persons received federally administered Supplemental Security Income (SSI) payments, a decrease of 10,400 from the previous month. The number of aged recipients dropped by 8,000, the disabled by 2,200, and the blind by 200. Among individual States, 5 reported a gain in their overall SSI caseload. The number of blind recipients rose in 21 States, the disabled in 14, and the aged in 3.

Federally administered payments in April totaled $730.9 million, a decline of $7.7 million from the March figure. Federal SSI payments of $573.8 million and State supplementation payments of $157.2 million declined by $5.7 million and $1.9 million, respectively.

**State-administered supplementary payments.** In February 1982, the number of persons receiving State-administered supplementation continued its downward pattern, reaching 247,900. Expenditures for these supplements, however, remained relatively stable at $20.6 million.

| OASDI | May 1982 | April 1982 | May 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,475 | 36,147 | 35,898 |
| Aged 65 and over, total | 24,552 | 24,520 | 23,969 |
| Retired workers | 18,183 | 18,173 | 17,676 |
| Survivors and dependents | 6,300 | 6,296 | 6,210 |

# Recent Trends in the Social Security Disability Insurance Program

by Mordechai E. Lando, Alice V. Farley, and Mary A. Brown*

**Earlier analysis documented the rapid growth of the Disability Insurance (DI) program from 1966 to 1975; this article discusses trends since 1975. Over the decade of the 1970's, the population insured for disability increased by 34 percent, and women as a proportion of the insured population rose from 32.4 percent in 1970 to 39.1 percent in 1980, reflecting the increase in female labor-force participation. Of disabled workers receiving benefits, the proportion that were women rose from 28.4 percent in 1970 to 32.4 percent in 1979. Although inflation caused total benefit costs to rise over the entire period, the number of DI beneficiaries began to decline in 1978. Disabled-worker awards reached a peak in 1975 and fell subsequently so that the 1969 and 1981 figures are approximately equal. Relative to 1970, the fraction of awards going to women increased, the share for persons aged 50–54 rose, and the proportion received by those aged 60–64 declined. Decreases in total awards, and hence recipients, stemmed primarily from higher rates of denial at both the initial application and the reconsideration stages. Higher denials were countered by substantial rises in the number of hearings and reversals by administrative law judges (ALJ's). In 1980, only 65 percent of all awards came from initial applications, while over a fourth resulted from ALJ reversals. In future years, recent legislative changes may be expected to curtail program expansion further.**

In an article that appeared in the **Social Security Bulletin** 6 years ago, it was noted that

> The number of beneficiaries and total expenditures under the DI program have grown significantly since 1966, when the last major liberalization of the disability definition took effect. During the period 1966–75, the number of persons receiving DI benefits increased more than 230 percent, rising from 1.9 million to 4.4 million. A decade ago, DI benefit payments of all types amounted to $1.8 billion. By 1975, this figure had risen more than four and a half times, to $8.4 billion. . . .[1]
>
> The rapid growth of disability insurance during recent years is the major program issue.[2]

The purpose of this article is to trace developments in the Disability Insurance (DI) program during the past 6 years and to contrast these developments with those for the period discussed in the first article. At the outset, it might be noted that the number of persons receiving DI benefits increased slowly from 4.4 million in 1975 to 4.9 million in 1978, and has since fallen by more than 400,000 in the past 3 years.

The tabulation below shows changes in the beneficiary population between 1975 and 1981. When the be-

| Type of beneficiary | 1975 | | 1978 | | 1981 | |
|---|---|---|---|---|---|---|
| | Number (in thousands) | Average monthly benefit | Number (in thousands) | Average monthly benefit | Number (in thousands) | Average monthly benefit |
| Disabled workers and dependents | 4,352 | ... | 4,869 | ... | 4,456 | ... |
| Disabled workers | 2,489 | $226 | 2,880 | $288 | 2,777 | $413 |
| Wives and husbands | 453 | 67 | 492 | 86 | 428 | 122 |
| Children | 1,411 | 62 | 1,497 | 83 | 1,252 | 123 |

---

*Division of Disability Studies, Office of Research and Statistics, Office of Policy, Social Security Administration. The authors wish to thank Sylvia Baskin, Shirley Baker, Marion L. Lehmuth, Ed Gamber, and Cheryl L. Bugg for their assistance.

[1] Mordechai E. Lando and Aaron Krute, "Disability Insurance: Program Issues and Research," **Social Security Bulletin**, October 1976, page 3.

[2] **Ibid.**, page 6.

ginning and end of the period are compared, it can be seen that the number of disabled-worker beneficiaries grew by 11.6 percent, while there were decreases of 5.5 percent for spouses and 11.3 percent for children receiving benefits. The number of disabled-worker beneficiaries peaked in 1978 at 2,880,000 and then fell by 3.6 percent by December 1981.[3] The number of dependent spouses receiving benefits reached a high of 494,000 in 1977 and has decreased by 13.4 percent since then. The number of dependent children receiving DI benefits peaked in 1977 at 1,525,000 and has decreased by 17.9 percent since then.

Despite the reduction in the number of beneficiaries, the cost of the program has continued to increase because average benefits rose due to increases in the contribution and benefit base and because of the indexing of benefits to the Consumer Price Index (CPI). Annual maximum taxable earnings rose from $14,100 in 1975 to $25,900 in 1980.[4] DI cash benefit payments of all types doubled between 1975 and 1981, rising from $8.4 billion to $17.2 billion—an average annual percentage increase of 12.6 percent. This increase was not as rapid as that during the 1966-75 period, when DI cash benefit payments rose at an annual rate of 18.3 percent. The average monthly amount paid to disabled-worker beneficiaries rose by 83 percent between 1975 and 1981—from $225.90 to $413.15. In comparison, the CPI rose by only 69 percent, from 161.2 in 1975 to 272.3 in 1981 (1967 = 100).

This report begins with an analysis of changes in the size of the insured population, in the number of persons receiving benefits, and in the number of allowances made at various levels of the adjudicative process. A disabled-worker award is a favorable determination for monthly disability benefits. It may result from an initial determination (that is, an adjudication based on the initial application) or at the secondary or tertiary levels. The secondary level is a reconsideration by a State agency of a denied applicant. The tertiary level is a hearing by an administrative law judge of a reconsideration decision that affirmed the initial denial. A small number of awards result from decisions by the Appeals Council and the Federal courts.[5]

Legislative changes in the DI program have undoubtedly affected its rate of growth. For example, the 1972 Amendments to the Social Security Act increased the desirability of receiving DI benefits and should have stimulated an increase in the number of applications and awards.[6]

## Program Operations and Issues

### Overall Trends

Table 1 illustrates the growth of the program over the past 16 years, from 1965 to 1981. The focus here is on trends during the periods 1970-75 and 1975-80. The former was a period of significant growth in the number of disabled workers receiving benefits while the latter was a period of stabilization.

The population insured for disability grew at approximately the same rate—15 percent—in both periods. In 1970, there were 72.4 million persons insured for disability. This number increased to 83.3 million in 1975 and is estimated to have reached 95.6 million in 1980. However, other program statistics behaved much differently over the periods. For example, after growing by 50 percent in the first period (peaking at 1.33 million in 1974), applications remained virtually stable in the second period. Thus, the figure for 1975—1,235,000—is not very different from the 1,264,000 applications received in 1980.

The net effect of all the various trends in program variables can be seen in the number of disabled workers with benefits in current-payment status—that is, those actually receiving benefits at the end of each calendar year. This number rose by two-thirds in the 1970-75 period, going from approximately 1.5 million in December 1970 to 2.5 million in December 1975. In December 1980, the corresponding figure was 2.9 million, or only 15 percent more than the 1975 figure.[7]

The number of disabled-worker beneficiaries per 100,000 persons insured for DI benefits is a better indicator of change because this statistic removes the effect of growth in the insured population. This number increased by about 45 percent between 1970 and 1975, going from 2,062 to 2,988 per 100,000. It increased slightly in 1976 and 1977 and then decreased during the next 3 years, producing a net effect of almost no change over the second 5-year period: The figure in December 1980 (2,993) was virtually the same as that in December 1975 (2,988). Preliminary estimates put the 1981 rate at 2,868.

Chart 1, which arranges the data on a logarithmic scale to permit the comparison of numbers of widely differing size, illustrates the relative rates of growth of the insured population and the number of disabled workers with benefits in current-payment status. Except for 1968—when the insured status requirements were re-

---

[3] The highest monthly number of disabled-worker beneficiaries was 2,881,000 in July 1979.

[4] Based on the 1972 legislation, as amended, cost-of-living increases in benefits have been paid effective each June since 1975. The increases were as follows: 1975—8 percent, 1976—6.4 percent, 1977—5.9 percent, 1978—6.5 percent, 1979—9.9 percent, 1980—14.3 percent, 1981—11.2 percent, and 1982—7.4 percent.

[5] For greater detail on the various levels of DI adjudication, see "The Bellmon Report," **Social Security Bulletin**, May 1982, pages 3-27.

[6] This legislation was enacted as Public Law 92-603. For a complete discussion of the law, see **1972 Amendments Chart Booklet: OASDI**, Social Security Administration, December 1972.

[7] The highest year-end total was 2,880,000, in December 1978. By December 1981, as noted earlier, this figure had decreased by 100,000.

**Table 1.**—Growth in the disability insurance program, 1965–81

| Year | Number of workers insured for disability (in millions) [1] | Disabled-worker applications: Number received (in thousands) | Disabled-worker applications: Number per 100,000 insured workers | Disabled workers with benefits in current-payment status: Number (in thousands) [2] | Disabled workers with benefits in current-payment status: Number per 100,000 insured workers | Total cash benefits paid for disability (in billions) |
|---|---|---|---|---|---|---|
| 1965 | 53.3 | 529.3 | 993 | 988.1 | 1,854 | $1.6 |
| 1966 | 55.0 | 544.5 | 990 | 1,097.2 | 1,995 | 1.8 |

[1] As of January 1st of calendar year.

[2] At end of calendar year.

[3] The 1967 Amendments to the Social Security Act liberalized the insured status requirements in case of disability onset before age 31.

[4] Preliminary estimates.

laxed for younger workers—the rate of growth for disabled workers receiving benefits was much greater than the growth rate for insured workers during the entire period 1965–77. The reverse has been true in the past 3 years.

Although the insured population grew in 1975–80 and the number of applications and of workers receiving benefits remained relatively constant, initial determinations, initial allowances, and total awards all decreased, after having experienced rapid growth in 1970–75. The greatest decrease was in initial allowances per 100,000 insured workers (table 2). These numbered only 250,000 in 1980, the lowest figure since 1965, despite an increase of more than four-fifths in the insured population and increases of more than 100 percent in the number of applications and initial determinations during the 15-year period. The total number of awards in 1980—390,000—was the lowest figure in a decade. (The preliminary figure for 1981—345,000—is the lowest since 1969.)

**Table 2.**—Average annual percent change for selected program indicators, 1970–75 and 1975–80

| Indicator | 1970–75 | 1975–80 |
|---|---|---|
| Insured workers | 2.9 | 2.8 |
| Applications | 8.1 | −.3 |
| Applications per 100,000 insured workers | 5.1 | −2.6 |
| Disabled workers with benefits in current-payment status | 10.8 | 2.8 |
| Disabled workers in current-payment status per 100,000 insured workers | 7.7 | .1 |
| Initial determinations | 9.8 | −1.2 |
| Initial allowances | 8.9 | −7.7 |
| Initial allowances per 100,000 insured workers | 5.9 | −8.4 |
| Awards | 11.1 | −5.7 |
| Awards per 100,000 insured workers | 8.0 | −6.9 |

Table 3 also shows initial allowances and total awards expressed as a number per 100,000 insured workers. This approach adjusts for the natural growth to be anticipated as a result of increases in the insured population. Expressed this way, the rates grew less rapidly in the earlier period and declined more precipitously in the later period. There were 1,322 applications per 100,000 insured workers in 1980, much below the peak of 1,656 in 1974 (when the Supplemental Security Income (SSI) program was introduced) but still higher than that for any year before 1973.[8] The initial allowance rate in 1980 of 266 per 100,000 insured workers was the lowest on record, while the rate for total awards—407 per 100,000 insured—was the second lowest in the history of the program. (The preliminary figure for 1981 was 357 awards per 100,000 insured, the lowest ever.)

In 1965–67, approximately half the initial determinations resulted in allowances. By 1978–80, however, the initial allowance rate had decreased to one-fourth. This decline was especially pronounced in the 1975–80 period, when the allowance rate dropped from 40 percent to 22 percent. Concomittant with the increase in the denial rate and the decrease in the number of initial allowances has been an increase in the number of awards made as a result of a reconsideration or hearing, and a sharp increase in their relative importance. As can be seen from table 3, initial allowances represented 92 percent of all awards in 1970, 83 percent in 1975, and 65 percent in 1980. As a result, allowances obtained after the initial level more than quadrupled in relative importance, going from 8 percent in 1970 to 35 percent in 1980.

---

[8] Approximately 1,136,000 applications for disability benefits were received in 1981. This figure amounted to about 1,173 applications for every 100,000 insured workers.

The growing divergence between initial allowances and total awards is illustrated by chart 2, which presents data per 100,000 insured workers. While the two series follow approximately the same pattern, the distance between them has grown significantly. In 1975-77, while initial allowances were decreasing sharply, the awards series decreased only slightly (the slope of a logarithmic chart represents the percentage rate of change). The same relationship is apparent for 1979-80.

## Workers Insured for Disability

Although the number of workers insured for disability grew by approximately the same proportion over the two periods, interesting changes occurred in the internal distribution of the population at risk. The population was younger and contained relatively more women in 1980 than in 1970 (table 4). The proportion of persons insured for disability who were younger than age 45 increased from 63.5 percent in 1970 to 65.9 percent in 1975 and to 69.1 percent in 1980. (The large increase observed between 1965 and 1970 resulted from the 1968 liberalization in the insured requirements for young persons.) Similar changes occurred for both men and women, but the median age for insured men was more than 2 years higher than that for women. This change in the age structure of the population is traceable to the effect of the post World War II baby boom.

The number of insured men grew by 9.6 percent in the first period and by 8.5 percent in the second period. The respective proportions for insured women were 26.5 percent and 26.1 percent. As a result, the proportion of women in the insured population increased from 32.4

[1] Includes all denials for both medical and nonmedical (lack of insured status) reasons. There is reason to believe that determinations are slightly overstated for 1979 and 1980 due to the possibility of receiving counts of certain denials for lack of insured status from more than one accounting system. The amount of error, if any, probably would not change the allowance rate by as much as one percentage point.

[2] The 1967 amendments liberalized the insured-status requirements for workers disabled before age 31.

[3] Preliminary estimates.

percent in 1970 to 39.1 percent in 1980. The growing number of women in the insured population is a result of the changing patterns of female labor-force participation (more married women and mothers working) and changing life styles (postponed marriage and/or postponed childbearing). The labor-force participation rate of married women with a husband present and children under 6 years of age rose from 28.5 percent in March 1969 to 45.0 percent in March 1980.[9] The rate for all married women rose from 39.6 percent in 1969 to 50.2 percent in 1980. At the same time, the rate for all married men was decreasing from 86.9 percent to 81.3 percent.[10]

## Disabled Workers with Benefits in Current-Payment Status

Data for December 1979 are used in tables 5 and 6. These are unfortunately the most detailed data available on disabled workers with benefits in current-payment status. A review of table 5 shows that, although the total number of persons receiving benefits doubled during 1970–79, the proportion of persons aged 55 and older remained constant. Although there was some increase in the relative importance of persons under age 45, this was compensated for by a decrease in importance for those aged 45–54. This trend has been stronger for women than it has been for men. Overall, women accounted for 28.4 percent of all disabled-worker beneficiaries in December 1970. By December 1979, this proportion had increased to 32.4 percent.

**Table 4.—Age distribution of workers insured for disability, selected years**

| Age | Total | | | Men | | | Women | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1970 | 1975 | 1980 | 1970 | 1975 | 1980 | 1970 | 1975 | 1980 |
| Total number | 72,358 | 83,273 | 95,578 | 48,896 | 53,583 | 58,128 | 23,462 | 29,691 | 37,450 |

**Source:** Unpublished table provided by the Office of the Actuary, May 18, 1981.

---

[9] Calculated from **Employment and Training Report of the President: 1981**, 1981, table B–7.

[10] **Ibid.**, table B–1.

The number of disabled-worker beneficiaries per 100,000 insured workers increased by 48 percent over the 9 years from 1970 to 1979 (table 6). Growth was greatest within the youngest age group, followed by those aged 55-59. This statistic grew more rapidly for men (54 percent) than for women (43 percent). When individual age-sex cells are examined, the statistic for men is much larger than it is for women. The greatest rate of growth (69 percent) was for women aged 45-54.

The number of women with benefits in current-payment status per 1,000 insured women in 1979 was less than the comparable number for men in 1975. At first glance, this finding appears to illustrate that women, who outlive men by almost 8 years, are healthier and experience less disability.[11] This hypothesis, however, is contrary to the findings of most health surveys, which indicate that women report greater morbidity than men.[12] For instance, preliminary data from the 1978 Survey of Disability and Work show that proportionately more women than men consider themselves disabled.[13] Interestingly, the difference centers in the percentage of those who regarded themselves as severely disabled (defined as "unable to work at all or unable to work regularly").

| | **All disabled** | **Severely disabled** |
|---|---|---|
| Men | 16.1 | 7.4 |
| Women | 18.4 | 9.7 |

Research has found that more men than women have limitations in activity and are unable to carry on the

major activity of their age-sex group.[14] This finding seems to be supported by the beneficiary data.

## Awards

Disabled-worker awards rose every year between 1965 and 1975, increasing by approximately one and a third times in the period. At their peak in 1975, such awards totaled nearly 600,000, more than one-fourth the number of persons with benefits in current-payment status at the end of 1974. Awards per 100,000 insured workers also peaked in 1975, at 694. Awards made since 1975 have declined rapidly in number to only 345,000 in 1981, or 58 percent of their peak. The number of awards in 1981 was approximately the same as the 1970 figure, despite a 34-percent increase in the population insured for disability. As a result, the award rate in 1981—357 per 100,000 workers—fell far short of the 480-per-100,000 figure in 1970.[15] In fact, the 357 awards per 100,000 workers in 1981 was by far the lowest rate in the history of the DI program.[16]

Table 5 compares the age-sex distribution of awards for 1970, 1975, and 1979. The strongest impression to be gained is that of the relative constancy of the distribution by age. In addition, over time the proportion of awards going to women has increased from 26 percent in 1970 to 31 percent in 1975 and 1979. This proportion is virtually the same for all age groups.

Table 6 compares award rates by age and sex for the 3 years. Overall, awards per 100,000 insured workers increased between 1970 and 1975 and then decreased, so that the 1979 rate was below the 1970 rate.[17] It is significant, however, that for persons aged 50-54 the 1979 rate, although lower than the 1975 rate, was higher than the 1970 rate. The big decrease between 1970 and 1979 appears only in the oldest age bracket, among those aged 60-64.

## Initial Allowances

It is quite difficult to explain the sharp decrease in both the number of allowances at the initial level and the allowance rate, defined as the number of initial allowances divided by the number of initial determinations. The number of initial allowances has declined to almost half its 1975 peak. The allowance rate, which had been about 50 percent in 1965-67, also declined during the next few years. This decline has been attributed to the increasing number of young workers applying for benefits after the 1967 amendments.

Over the 6-year period 1970-75, the allowance rate hovered around 40 percent, ranging from 39 percent to

---

[14] See Lois M. Verbrugge, **op. cit.**, pages 395-397.

[15] As table 2 shows, the 1969 figure of 492 was depressed due to the increase in the insured population caused by the liberalization of the insured-status requirements for young persons in the 1967 amendments.

[16] See the data on gross incidence rates in Bruce D. Schobel, **Experience of Disabled Worker Benefits Under OASDI, 1974-78** (Actuarial Study No. 81), Office of the Actuary, Social Security Administration, April 1980, table 1.

[17] As noted in Schobel, **op. cit.**, this rate is a crude approximation of a gross incidence rate.

Source: **Social Security Bulletin: Annual Statistical Supplement**, selected years.

42 percent. The rate then dropped sharply so that by 1980 about 4 out of every 5 initial determinations was a denial. Initial allowances per 100,000 insured workers decreased by more than half between 1975 and 1980.

Several theories have been suggested as partial explanations of the recent decline in initial allowances. These include improvement in the health status of the population, the increase in nonmedical denials, and tighter administration of the adjudicative standards. No factor appears to completely account for all of the decline.

**(1) Improvement in the health status of the population.** One measure of this improvement is the significant decrease in mortality rates in recent years. The death rate declined from 945 per 100,000 population in 1970 to 888 in 1975 and then increased slightly to 893 in 1980.[18] The following tabulation presents age-specific death rates for persons aged 45–54 and 55–64 (more than four-fifths of all disabled-worker beneficiaries are in these age brackets).

| Age | 1970 | 1975 | 1980 |
|---|---|---|---|
| Total | 945 | 888 | 893 |
| 45–54 | 730 | 650 | 591 |
| 55–64 | 1,659 | 1,496 | 1,381 |

The death rate for persons aged 45–54 decreased by 19 percent between 1970 and 1980, and that for persons aged 55–64 decreased by 17 percent over the same period. Both decreases were relatively much larger than the change observed for the total population of all ages.

On the other hand, figures on self-reports of health status or disability status suggest a slight increase in morbidity rates. Data from the National Center for Health Statistics on limitations in major activity, for example, show an increase from 9.1 percent of the population in 1969–70 to 10.9 percent in 1980.[19] A similar trend in the number and proportion of persons identifying themselves as severely disabled is also shown in the Social Security Administration's periodic surveys of the disabled. The 1978 Survey of Disability and Work found that 10.9 million persons aged 18–64 identified themselves as being severely disabled. This figure represented 8.6 percent of the working population. The 1972 Survey of Disabled and Nondisabled Adults found 7.4 million severely disabled persons aged 20–64, who represented 7.0 percent of the relevant population.[20] The 1966 Social Security Survey of the Disabled found that 6.1 percent of the population claimed to be severely disabled.[21] The relevant figures from the 1972 and 1978 disability surveys are shown in the following tabulation.

---

[18] Data from the National Center for Health Statistics, **Monthly Vital Statistics Report**, September 17, 1981, table 7. The 1980 data is provisional. The age-adjusted death rate has dropped more rapidly, going from 714 in 1970 to 638 in 1975 and to 606 in 1978. **Monthly Vital Statistics Report**, supplement 2, September 17, 1980.

[19] The 1969–70 data are from Bureau of the Census, **Statistical Abstract of the United States, 1980**, 1980, table 202. The data for 1980 are from the National Center for Health Statistics, "Current Estimates from the National Health Interview Survey, 1980," **Vital and Health Statistics**, December 1981.

| 1978 .... | 10.9 | 8.6 | 4.7 | 7.5 | 6.2 | 9.7 |

**(2) The increase in nonmedical denials.** Applicants who have not attained DI insured status cannot be accepted in the DI program regardless of their degree of medical impairment. The number of such nonmedical denials of DI benefits more than tripled between 1967 and 1980, rising from 117,000 to 371,000 (table 7). Overall, the increasing number of ineligible applicants contributed to some, but by no means accounted for all, of the decline in the aggregate denial rate.

In the early 1970's, the initial allowance rate stayed relatively steady, hovering around 40 percent (table 3). The component parts of this rate were also level, with the proportion of nonmedical denials at about one-fourth of all initial determinations, and the substantive allowance rate, which excludes nonmedical denials, remaining somewhat over 50 percent (table 7).

Between 1975 and 1980, nonmedical denials rose at a slightly slower rate than substantive denials (20 percent, compared with 22 percent); however, as a proportion of all denials, nonmedical denials were relatively constant at about 40 percent. The total allowance rate declined sharply between 1975 and 1980, however, and the substantive allowance rate fell from 53.1 percent in 1975 to 32.2 percent in 1980. The fact that nonmedical denials were a relatively constant fraction of all denials while the total allowance rate was falling suggests that increases in the nonmedical denial rate did contribute to the increase in the total denial rate. But the decline in the substantive allowance rate between 1975 and 1980 shows that much of the decrease in the total initial allowance rate was due to factors other than an increase in ineligible applicants.

**Table 7.**—Nonmedical denials[1] and the substantive allowance rate,[2] 1967–80

[1] Denials as a result of a lack of insured-for-disability status.

[2] Allowances as a proportion of the sum of allowances and denials for substantial gainful activity and medical reasons (the denominator excludes nonmedical denials).

**(3) Tighter administration of the standards set by the Social Security Administration and carried out by State agencies.** Although there have been no major changes in the rules used for determining disability eligibility, there has been increased congressional scrutiny of the administration of the program, particularly in light of the rapid increases in program costs occurring in the early 1970's. For instance, in 1974 the **Committee Staff Report on the Disability Insurance Program** found:

> The estimated actuarial cost of the disability insurance program has doubled in about 5 years. This increase is the result primarily of higher allowance (or incidence) rates and lower termination rates. While part of these changes are attributable to changes in the law enacted by Congress during this period, other factors must be looked to in order to account for such significant cost increases. These other factors related to the manner in which the disability insurance program is administered and general economic forces.[22]

Among the issues discussed by the staff in addition to the cost of the program were State agency operation, disability appeals procedures, standards and definition of disability, and the growing importance of Social Security disability litigation. Oversight of the DI program by the Subcommittee on Social Security of the House Ways and Means Committee continued unabated throughout the next 6 years,[23] culminating in three pieces of Federal legislation.[24] With all this interest on the part of Congress as well as the executive branch in the effect of program administration on costs, it is quite possible that State agencies and disability examiners have become more conservative in the way in which they interpret and apply the standards.

[24] The new laws were the Social Security Amendments of 1977, the Social Security Disability Amendments of 1980, and the Omnibus Budget Reconciliation Act of 1981.

## Allowances After the Initial Level

Despite, or perhaps because of, the sharp decrease in the number of initial allowances, the number of allowances after reconsideration or hearing has continued to grow (table 8). The largest increase has occurred at the tertiary level of hearings before an administrative law judge (ALJ). As will be seen, the increase at the ALJ level resulted from a combination of more hearings and a higher reversal rate. The decrease in the initial allowance rate (tables 3 and 7) that started about 1976 also affected reconsideration reversals. The latter series, after increasing every year between 1967 and 1975, began to decline in 1976. But whatever caused the increase in State agency denials at the initial and reconsideration stages does not seem to have affected the ALJ's. It is possible that the ALJ reversal rate has increased because of cases denied at the first two levels that would have been allowed in earlier years. Unfortunately, no data are available with which to evaluate this hypothesis.[25]

Table 9 highlights the changing trends in the various levels of the DI program. Between 1970 and 1975, initial substantive determinations grew by more than half, rising from approximately 600,000 to 931,000 in the period and then falling by 15 percent to 788,000 in 1980. The number of allowances at this level was half again as large in 1975 as it had been in 1970, and then was halved, so that there were about 70,000 fewer initial allowances in 1980 than there had been in 1970. The number of reconsiderations increased by one and one-third times from 1970 to 1975, and then increased more slowly to stand, in 1980, at 272 percent of the 1970 level. However, the reversal rate (denials changed to allowances) at the reconsideration level decreased slightly between 1970 and 1975, and dropped sharply between 1975 and 1980. As a result of a 14.7-percent reversal rate, the number of allowances after reconsideration in 1980 was 36,000, only 7.4 percent above the 1970 level despite the 72-percent growth in the number of reconsiderations. The relative drop in the reconsideration reversal rate over the 1970-80 period—58 percent—was greater than the 43-percent drop in the initial allowance rate. Thus, the increase in denials among the State disability determination units was even more pronounced at the secondary or reconsideration level than it was at the initial level.

Although the denial rate rose at the initial and secondary levels, the opposite appears to be true at the tertiary or ALJ hearing level. The number of hearings tripled between 1970 and 1975, and increased by another 78 percent from 1975 to 1980. The 169,000 hearings in 1980 were more than five times the 31,000 hearings in 1970. Concomittant with the increase in the number of hearings was an increase in the reversal rate, which went from 43.4 percent in 1970 to 48.4 percent in 1975 and to 58.2 percent in 1980. As a result of both these changes—more hearings and more reversals—allowances at the hearings level increased three and one-third times between 1970 and 1975 and then more than doubled between 1975 and 1980. Hearings allowances in 1980 amounted to more than seven times the 1970 level. In 1970, allowances at the hearing level were equal to 41 percent of those at the reconsideration level, 4.2 percent of those at the initial level, and 3.7 percent of those at all levels. By 1980, allowances at the hearing level amounted to almost three times as many as those arising

[4] Appeals Council and court cases may include a few disabled children and disabled widow(er) cases.

from reconsiderations, three-tenths of those resulting from initial allowances, and one-fourth of all allowances. A large increase also occurred in the number of cases pursued as far as the Appeals Council and the courts, but the number of allowances attained at these levels of adjudication still amounted to less than 1 percent of all allowances.

The SSA administrative data system does not easily permit the tracing of decisions made after the initial level back to the year of the initial disposition. In the tabulation that follows, all decisions are therefore treated as though they occurred in the same year. In 1970, about one-third of all persons whose applications were denied initially pursued their case to reconsideration. By 1975–80, about 45–50 percent of the applicants demanded a second decision. Even more interesting is the change at the hearing level. In 1970, half of those denied an allowance at the reconsideration level went on to a hearing. By 1980, this proportion had increased to four-fifths. As a result of this sharp increase, ALJ's, who had been reversing one-fifth of the reconsideration denials in 1970, were reversing almost half in 1980. Reconsiderations and ALJ allowances of claims denied at a previous level together represented about 17 percent of the substantive denials in 1970, but in 1980 they represented more than a fourth of those denials. The proportion of persons whose claims were denied at the ALJ level who took their case to the courts also increased from 46 percent in 1970 to 55 percent in 1980.

| Item | 1970 | 1975 | 1980 |

| ALJ hearings as a proportion of reconsideration denials | 50.2 | 63.8 | 80.8 |
| ALJ allowances as a proportion of reconsideration denials | 21.8 | 30.9 | 47.8 |
| ALJ allowances as a proportion of substantive denials | 4.9 | 10.6 | 18.7 |

## Summary and Conclusions

This article has shown that in 1982 overall growth in the DI program is not the issue it was in 1976. The number of disabled workers with benefits in current-payment status and the number of dependents receiving benefits as a result of a worker's disability have been decreasing. The increases in expenditures for the DI program are due to the indexing of benefits and increases in the earnings base. These increases are not unique to the DI program but affect all the cash benefit programs under Social Security.

In its 1982 Annual Report, the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds described the major short-run problem facing the program as a projected shortfall in the Old-Age and Survivors Insurance Trust Fund that is being exacerbated by continuing unfavorable economic conditions. The trustees point out, however, that "the Disability Insurance Trust Fund is projected to grow rapidly in both the short range and the long range."[26]

Three pieces of recent legislation were designed, in part, to address the growth experienced during the 1970's in the DI program. These new laws were (1) the Social Security Amendments of 1977, (2) the Social Security Disability Amendments of 1980, and (3) the Omnibus Budget Reconciliation Act of 1981. Only the 1977 amendments may have affected program experience during the period examined in this article. The other legislation will exert an impact in the early 1980's, and may be expected to have a strong influence on future experience.

Although it is difficult to forecast DI program trends with precision, some future developments appear likely. The net effect of the three pieces of legislation cited above should be to (1) diminish the number of applications for DI benefits, (2) reduce average benefits and replacement rates, and (3) encourage some persons on the rolls to venture off them because of the longer protection afforded by the new trial-work provisions and the provision of Medicare benefits for 24 additional months beyond the automatic reentitlement period.

---

[26] 1982 Annual Report of the Board of Trustees of the Federal Old-Age and Survivor Insurance and Disability Insurance Trust Funds, 1982.

Earlier work on a predictive model[27] for DI applications and benefits indicated that macroeconomic conditions as represented by the unemployment rate predict the number of applications for DI benefits well. Other things being equal, the current high and still-rising unemployment rates should lead to an increase in the number of applications and awards.

Although it is impossible to weigh the respective impacts of these opposing forces, on balance, it would appear that the cumulative effect of the legislation is more important than the opposite influences. In fact, the number of disabled-worker applications for DI benefits, which had remained relatively constant over the past few years, began to decrease in 1981. The total number in that year—approximately 1,136,000—was 10 percent below the corresponding figure for 1980. This decrease has continued during early 1982; preliminary data for January–May indicate that applications were about 18 percent below the comparable figures for 1981.

# Notes and Brief Reports

## The New CPI and Cost of Living Increases for OASDI and SSI*

On October 27, 1981, the Bureau of Labor Statistics (BLS) announced that it is planning to change the homeownership component of the Consumer Price Index (CPI) to a rental equivalence measure. The change in the CPI for All Urban Consumers (CPI-U) will be effective with publication of the January 1983 data; the change in the CPI for Urban Wage Earners and Clerical Workers (CPI-W) will be effective with publication of the January 1985 data. Neither series will be published in its present form once the new series are introduced. The CPI-W is the price index used to annually adjust Old-Age, Survivors, and Disability Insurance (OASDI) and Supplemental Security Income (SSI) benefits. This note shows that if a measure similar to the planned new index had been used in the past, it would have resulted in lower benefit payments. The note also discusses factors that could affect differences between the old and the new indexes in the future.

### Rationale for the New Index

The rationale for the new index is based on the notion that it should not include the investment aspects of housing expenditures. Rather, the index should include only the cost of "consuming" the shelter services provided by housing. For renters, this cost is adequately reflected in the rental cost of housing. For homeowners, however, the current treatment includes investment aspects.

Presently, all items in the CPI, including homeownership, are treated as services or nondurable consumption goods. In other words, consumer durable purchases such as refrigerators and owned homes are not amortized over their service lives, but are treated as though they are fully consumed in the period of purchase. This treatment is appropriate for three of the five costs of homeowning—property taxes, insurance, and maintenance and repairs. For the other two costs—purchase price and interest—many persons, including staff at the BLS, believe the treatment is inadequate. A home provides both housing services and investment income in the form of capital gains. Since the intent of the CPI is to measure the cost of a representative basket of consumption goods and services, it should not be affected by the investment aspects of homeownership. The new rental equivalence method attempts to make the index sensitive only to changes in the costs of producing housing services by owner-occupied homes. This objective is accomplished by using a current rental value, derived from a sample of residential rents for currently rented housing units, as the cost of homeownership services. Neither current housing prices nor current mortgage interest rates are explicitly included in the new index; of course, the other three components are also excluded because they implicitly appear in the rental cost measure.

Shifting to the new rental equivalence measure of homeownership costs follows a long period of BLS study and public discussion of the technical adequacy of the current treatment of homeownership.[1] During this period, the BLS developed and monitored five experimental CPI's that deal with the homeownership issue in different ways. One of those experimental indexes (known as CPI-X1) uses the rental equivalence approach and, indeed, this index—with improvements in weighting and sampling procedures—will be the new published index.[2]

### Past Trends in CPI-W and CPI-X1

A comparison of annual percentage changes in the CPI-X1 with annual percentage changes in the CPI-W is shown in table 1 for 1967-81.[3] During this period, which includes the highest sustained inflation in the country's postwar history, the CPI-X1 never increased faster than the CPI-W on an annual basis. By 1981, the CPI-W had increased by 172 percent and the CPI-X1 by only 148 percent. A number of month-to-month increases were larger for the CPI-X1 than for the CPI-W, but the dominant tendency *during this period* was for inflation to appear lower when measured by the CPI-X1.[4] This result occurred primarily because mortgage interest costs increased much more rapidly (520 percent) and rents increased somewhat more slowly (110 percent) than the overall price level. The largest difference between the rates of change in the indexes (2.3 percentage points) occurred in 1980 when both indexes recorded their highest inflation rates. There were differentials of close to one percentage point or more in one-half of the years during this period. Clearly, if CPI-X1 had been used as the basis for inflation adjustments to OASDI and SSI benefits when such adjustments began, benefits would now be lower and the OASDI Trust Fund reserves would be larger.

[1] Many foreign countries that report a measure of prices comparable to the U.S. CPI treat homeownership in a manner similar to the rental equivalence approach or exclude it entirely. See testimony of Janet L. Norwood, "Changes in Consumer Price Index," **Hearings before the Subcommittee on Census and Population of the Committee on Post Office and Civil Service**, House of Representatives, 97th Cong., 1st sess., November 10, 1981, pages 38 and 44.

[2] In addition to the CPI-X1, there are two other flow-of-services measures (the CPI-X2 and the CPI-X3), as well as two outlays measures (the CPI-X4 and the CPI-X5). For an explanation of these experimental measures, see Bureau of Labor Statistics, **CPI Detailed Report: March 1982**, May 1982. For a detailed discussion of the rationale for the change, see Robert Gillingham and Walter Lane, "Changing the Treatment of Shelter Costs for Homeowners in the CPI," **Monthly Labor Review**, June 1982, pages 9–14.

## Benefit Payments Indexed by CPI-X1 Compared with Actual Payments

By law, beginning in 1975, OASDI and SSI benefits have been adjusted in June of each year by the annual increase in the CPI-W, measured as the first-quarter to first-quarter percentage change. The inflation adjustment factors calculated in this manner are reported in table 2 for the period 1975-81 for the CPI-W and the CPI-X1. The same pattern observed in table 1 for annual changes is apparent when first-quarter changes are compared for the two concepts—namely, that increases in the CPI-X1 are never larger than increases in the CPI-W.

Table 3 shows the actual calender year totals for both OASDI and SSI benefit payments along with the estimated amount that payments would have been reduced had the CPI-X1 rather than the CPI-W been used to adjust for inflation. To facilitate construction of the benefit reduction estimates, it was assumed that the difference in "indexing" factors would not have altered retirement behavior or program participation rates from what actually occurred. These effects would probably have been quite small anyway. In addition, some interactions between OASDI and SSI, which would have had small effects on the SSI benefit reduction estimates, were ignored. The effect of "decoupling," as provided in the 1977 Amendments to the Social Security Act, however, was included in the OASDI estimates.[5]

By 1981, both OASDI and SSI benefit payments would have been about 5-6 percent below actual payments had the CPI-X1 been used for indexing.[6] The combined balance of the OASDI Trust Funds at the end of calendar year 1981 would have been about $22 billion

**Table 2.**—Consumer Price Indexes: First-quarter to first-quarter percentage changes, 1975-81

| Year | CPI-X1 [1] | CPI-W |
|---|---|---|
| 1975 [2] | 7.0 | 8.0 |
| 1976 | 6.2 | 6.4 |
| 1977 | 5.9 | 5.9 |
| 1978 | 6.1 | 6.5 |
| 1979 | 8.6 | 9.9 |
| 1980 | 11.6 | 14.3 |
| 1981 | 10.3 | 11.2 |

[1] Computed from monthly BLS data.

[2] The 1975 changes are from the second quarter of 1974 to the first quarter of 1975, reflecting the specification in the law of the June 1975 benefit adjustment.

---

[3] The CPI-X1 is available back to 1967. From 1967 to 1977, it is available only for urban wage earners and clerical workers (the "W" population); for 1978-82, only for all urban consumers (the "U" population). The CPI-U is only available back to 1978. Over 1978-82, the movements of CPI-W and CPI-U have been quite similar; in addition, the movements of the homeownership and rent indexes for the U population have been similar to the movements of the corresponding indexes for the W population.

[4] However, since the middle of 1980, almost half of the monthly changes have been larger for the CPI-X1. Most recently, the Bureau of Labor Statistics reported larger increases for the CPI-X1 in January and March of 1982.

[5] Changes in OASDI and SSI payments impact on other government programs, the most important of which are Aid to Families with Dependent Children, food stamps, Medicaid, and housing assistance. No attempt was made to quantify such impacts.

[6] Most recently, the increase in the CPI-W from the first quarter of 1981 to the first quarter of 1982 (7.4 percent) exceeded the increase in the CPI-X1 (7.2 percent). If table 3 were extended to include 1982, it is estimated that indexing by the CPI-X1 rather than the CPI-W would lower 1982 benefit payments for OASDI and SSI by $8.9 billion and $0.4 billion, respectively.

**Table 3.**—OASDI and Federal SSI cash benefit payments: Actual amounts and reductions due to indexing by CPI-X1

[In billions]

| Calendar year | OASDI benefit | | Federal SSI benefits [2] | |
|---|---|---|---|---|
| | Actual | Reduction [1] | Actual | Reduction [3] |
| 1975 | $66.9 | $0.3 | $4.314 | $0.020 |
| 1976 | 75.7 | .8 | 4.512 | .045 |
| 1977 | 84.6 | 1.0 | 4.703 | .050 |
| 1978 | 92.9 | 1.3 | 4.881 | .065 |
| 1979 | 104.3 | 2.2 | 5.279 | .110 |
| 1980 | 120.5 | 4.7 | 5.866 | .225 |
| 1981 | 141.0 | 7.5 | 6.518 | .360 |

[1] Estimates by Office of the Actuary, Social Security Administration.

[2] Excludes State supplementation payments.

[3] Estimates by the Division of Supplemental Security Studies, Office of Research and Statistics, Office of Policy, Social Security Administration.

larger, including the additional interest income that would have been earned on the higher balances during the roughly 7-year period. The actual combined OASDI Trust Fund balance stood at $24.5 billion at the end of 1981, 15 percent of projected 1982 disbursements. Thus, had the CPI-X1 been used to index OASDI benefits, the combined OASDI Trust Funds would be almost twice as large as they actually were by the end of 1981 and projected 1982 disbursements would be lower. The larger fund would be 31 percent of projected 1982 disbursements.

## Factors Affecting Relative Behavior of New and Old Indexes

Using the CPI-X1 to index OASDI and SSI benefits for the past 7 years would have resulted in lower payments. However, use of the new, rental equivalence CPI will not necessarily result in lower future payments. The changes in the CPI can effect both the level and volatility of the new index relative to the old index.

The future relative levels of the new and old indexes depend, in complex ways, on a variety of difficult-to-predict factors.[7] The homeownership component of the old index depends in large part on future home prices and mortgage interest rates, and the homeownership component of the new index depends on future rental prices. Because of the different treatment of homeownership in the indexes, the weight on homeownership in the new index will be considerably lower than it would be in the old. This means that the weights on all items other than homeownership in the new index must be higher than in the old. Thus, the future behavior of the relative levels of the two indexes depends not only on future values of interest rates, home prices, and rents, but—due to the different weights—on future values of all other CPI components as well.

It does seem likely that the new index will be less volatile than the old index in the future. In the past, the rent index showed less variability around its trend growth than the current homeownership component, and the CPI-X1 showed less variability around its trend growth than the CPI-W. If past patterns persist, the inflation rate as measured by the new index, whether higher or lower than if measured by the old index, will tend to be more stable. On the other hand, because the weight on all nonhomeownership components in the new index will be higher than in the old index, the new index will be more sensitive to large fluctuations in nonhomeownership components. Thus, if at times in the future the old homeownership component exhibits reduced volatility and the nonhomeownership component exhibits sizable volatility, the new index could be relatively more volatile.

Clearly, a large number of factors that are hard to predict will determine the future relative behavior of the new and old indexes. It follows directly that it would be difficult to predict future differences in benefit payments under the new and old indexing procedures.

---

[7] This section was written as if the old index (the CPI-W with the current treatment of homeownership) will continue to be published. In fact, publication of the old index will cease in 1985.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

## Table M-2.—Public income-maintenance programs: Hospital and medical care payments, 1940-81

---

[1] Benefit expenditures from the Federal Hospital Insurance and Supplementary Medical Insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940–81

---

[1] Represents contributions of employees, employers, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the Hospital Insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968 for military credits and Federal payment for special age-72 benefits (see footnote 4).

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old-age reserve account, January 1937–December 1939.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[11] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[12] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950–51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits (see footnote 4).

[4] Includes interfund transfer of interest on reimbursed administrative expenses 1958 to date (see footnote 6).

[5] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[11] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[12] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2, was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under sec. 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[8] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

**Table M-10.**—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[Data contain some duplication arising from dual entitlement; see the **1980 Annual Statistical Supplement**, p. 9]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[7] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and type of benefit, 1940–82**

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement**, p. 9]

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

### Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940–82

| Period | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–82

[Numbers in thousands]

| Period | Retired workers |  |  | Wives and husbands |  |  |

---

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because earnings of the beneficiary or the worker on whose account benefits are paid exceed the earnings test amount; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| April | 66,407 | 30,025 | 8,126 | 28,256 |

---

[1] Includes, from July 1957 to October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

### **Table M-18.**—Supplemental Security Income: Number of persons receiving federally administered payments and total amount, by reason for eligibility, April 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,987,671 | $730,949 | $573,753 | $157,196 |
| Aged | 1,647,221 | 227,060 | 166,189 | 60,870 |
| Blind | [2] 78,355 | 17,825 | 12,941 | 4,884 |
| Disabled | [3] 2,262,095 | 486,065 | 394,623 | 91,443 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 419,000 persons aged 65 and over.

### **Table M-20.**—Supplemental Security Income: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–82

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by Supplemental Security Income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and one or both parents or one caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program, and emergency assistance payments, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to Families with Dependent Children | General assistance | |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by Supplemental Security Income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

**Table M-30.**—Aid to Families with Dependent Children: Number of families and recipients, by State, January–March 1981

[1] Benefits payable under the black lung program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the U.S. Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] |  | Initial claims (weekly average) [4] | All types of compensated unemployment |  |  |  | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
|  | Number of workers [2] | Percent of covered employment [3] |  | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries |  |  |  |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

---

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-37.—Unemployment insurance: Selected data by State, September 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent of covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid | Average weekly number of beneficiaries | | |
| Total | 2,488,368 | 2.9 | 382,495 | 602,671 | 9,567,363 | $1,001,219 | 2,174,401 | $107.39 | 206,574 |

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-38.—Gross national product and personal income, by type, 1950-81

[Amounts in billions. Monthly amounts at annual rates. Before 1960, data for the 48 States and the District of Columbia, except where otherwise noted; beginning 1960, includes Alaska and Hawaii]

| Period | Gross national product [1] | Personal income | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Wage and salary disbursements [2] | Social insurance and related payments [3] | | Public assistance and related payments [4] | | Other income [5] | Less personal contributions for social insurance [6] |
| | | | | Amount | Percent of personal income | Amount | Percent of personal income | | |
| 1950 | $286.2 | $226.1 | $147.0 | $7.0 | 3.1 | $2.3 | 1.0 | $72.7 | $2.9 |
| 1955 | 399.3 | 308.8 | 211.7 | 13.1 | 4.2 | 2.5 | .8 | 86.7 | 5.2 |

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, Aid to Families with Dependent Children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War II bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the Social Security program.

## Table M-39.—Civilian population and labor force, 1940–81

[Numbers in thousands]

---

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

## Continuing Disability Investigations to Feature Face-to-Face Interviews

To minimize "anxiety, misunderstandings, and hardships" resulting from a recent change in the disability review process, Commissioner John A. Svahn has announced that Continuing Disability Investigations (CDI's) soon will begin with face-to-face beneficiary interviews in district or branch offices of the Social Security Administration (SSA). Under a provision of the Social Security Disability Amendments of 1980 (Public Law 96-265), all Disability Insurance beneficiaries, except those whose conditions have been determined to be permanent, must undergo such investigations at least once every 3 years. As a result of these reviews, many individuals have been removed from the rolls because they were found to be no longer disabled under the terms of the law.

Beginning next month, the Commissioner said, the disability folders that would normally be sent to the Disability Determination Services (DDS's) in the States for review will be diverted to the appropriate SSA servicing office. These folders will primarily consist of newly matured medical reexamination and periodic review diaries. After the office has completed the interview, the folder will be sent to the appropriate DDS to complete the medical development and make the CDI determination. If the CDI process is curtailed in the SSA office, the folder will be returned to the processing center, where it will be rediaried for future action.

Four reasons were cited for this change in procedure. According to Commissioner Svahn, the face-to-face interviews will:

—Personalize periodic review by allowing interviewers to explain the reasons for the review and, step by step, how the process works. This contact should reduce the anxiety experienced by some Disability Insurance beneficiaries who were not aware that their status would be reevaluated. The front-end interview will also allow the SSA office to explain beneficiary rights and responsibilities.

—Establish a working rapport between SSA and the beneficiaries. They will also give beneficiaries an opportunity to provide direct personal input into the CDI decision process.

—Enable interviewers to curtail CDI's when such action is clearly warranted by the current medical condition of beneficiaries. In those cases where the CDI should be curtailed, the interview will end the CDI process.

—Provide the SSA office with an opportunity to obtain from beneficiaries information about medical care, treatment, and current medical condition, and to record any observations that relate to impairment. This information will assist the DDS in making its determinations and will improve the quality of initial CDI decisions.

## Program Operations

### OASDI Benefits

At the end of May 1982, the number of beneficiaries under the Old-Age, Survivors, and Disability Insurance (OASDI) program totaled 35,474,968—down 671,000 from the number receiving benefits at the end of April. This decrease was partially due to the student benefits phase-out provision of the 1981 amendments. These amendments provided for the temporary suspension of benefits to post-secondary school students during the months of May through August.

Beneficiaries of the OASDI program were receiving $12.2 billion in monthly cash benefits at the end of May. OASI beneficiaries—who totaled 31.3 million—received 89 percent of the total amount payable.

The number of monthly cash benefits awarded in May 1982 reached 372,655. Thirty-nine percent of these awards were to retired workers and 8 percent were to disabled workers. Eighty-five percent of all awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $351.50 for retired workers and $414.64 for disabled workers.

Average monthly benefit amounts payable in May 1982 to retired and disabled workers were $387.23 and $412.28, respectively. A year earlier, average benefits were $343.93 for retired workers and $371.48 for disabled workers.

### SSI Payments

**Federally administered payments.** In May 1982, 3,961,900 persons received Supplemental Security Income (SSI) payments, a decrease of 25,700 from the total in April. The number of aged recipients dropped by 15,200, the disabled by 10,300, and the blind by 300. All States reported a decline in their overall and aged caseloads, while the disabled caseload decreased in 47 States, and the blind in 38.

Federally administered payments totaled $723.6 million in May, a decrease of $7.3 million from the previous month. Federal SSI payments of $567.9 million and State supplementation payments of $155.8 million were down $5.9 million and $1.4 million, respectively.

**State-administered supplementary payments.** In March 1982, the State-administered supplementation caseload increased slightly from the number in February to 248,400. Likewise, expenditures for these State payments rose slightly from $20.6 million to $20.7 million during this 1-month period. Of the 25 States reporting, 15 had increases in both their supplementation caseloads and expenditures, two reported decreases, four had reductions in either one or the other, and four States reported no changes.

| OASDI | June 1982 | May 1982 | June 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,460 | 35,475 | 35,793 |
| Aged 65 and over, total | 24,561 | 24,552 | 23,990 |
| Retired workers | 18,187 | 18,183 | 17,693 |
| Survivors and dependents | 6,305 | 6,300 | 6,213 |
| Special age-72 beneficiaries | 69 | 70 | 83 |
| Under age 65, total | 10,899 | 10,923 | 11,803 |
| Retired workers | 2,205 | 2,195 | 2,099 |
| Disabled workers | 2,713 | 2,713 | 2,836 |
| Survivors and dependents | 5,891 | 6,015 | 6,868 |
| **Total monthly benefits** (in millions)[1] | $13,100 | $12,193 | $12,053 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $415.94 | $387.23 | $382.83 |
| Disabled workers | 442.85 | 412.28 | 413.56 |
| Aged widows and widowers | 373.67 | 347.71 | 344.37 |
| Children of deceased workers | 289.63 | 269.39 | 268.58 |
| **Average benefits awarded:** | | | |
| Retired workers | $379.98 | $385.58 | $394.60 |
| Disabled workers | 454.08 | 414.30 | 438.88 |
| Aged widows and widowers | 363.34 | 341.10 | 338.67 |
| Children of deceased workers | 282.21 | 255.23 | 268.87 |

# The Health of Very Early Retirees

by Eric R. Kingson*

This study examines the health of a sample representative of 1.8 million men aged 45–59 in 1969 who permanently withdrew from the labor force before age 62 between 1966–1975. The analysis concentrates on comparing the health of men receiving Social Security disability benefits with that of men reporting work-limiting health conditions at labor force withdrawal but not receiving Social Security disability benefits. The data suggest that the health of these groups is more similar than dissimilar.

The major policy implication of the study is that consideration should be given to liberalizing the eligibility criteria for the Social Security and Supplemental Security Income (SSI) disability programs as they apply to older workers.

Men who leave work before age 62 are a special group of early retirees. Their uniqueness arises from the fact that they are not eligible for early entitlement benefits under Old Age and Survivors Insurance (OASI) at the time of their labor force departure. Consequently, their labor force exit is less likely to be influenced by the availability of OASI than older groups, and many are likely to experience major income losses.

It is well known that health problems are one of the major precipitating factors of early labor force withdrawal (Andrisani, 1977; Bixby, 1976; Parnes and Meyers, 1972; Parnes and Nestel, 1977; Reno, 1971; Schwab, 1976; Sheppard, 1977). For example, Schwab's analysis of the Retirement History Study data (U.S. Department of Health, Education and Welfare, 1977) found that 65 percent of the men aged 58 to 63 who were out of the labor force in 1969 cited health as their main reason for withdrawal. Subsequent analysis by Bixby of the data when these men were 62–65 found that nonemployment in 1973 of men who worked in 1969 "was influenced much more by self-assessment of health-related work limitations than any of the other seven factors" employed in the analysis.

It should be noted that other factors, most notably expected retirement income, influence early labor force withdrawal behavior.

This paper examines the health of men who leave

### Health and Early Retirement: Two Views

The influence of health on a worker's decision to withdraw from the labor force is a subject of continuing research. In this issue of the **Bulletin**, two members of the staff of the National Commission on Social Security Reform examine the extent to which ill health prompts workers to leave the labor force.

"The Health of Very Early Retirees," by Eric R. Kingson, is reprinted by special permission of **Aging and Work**, copyrighted 1981 by the National Council on the Aging. Taking exception to the findings of this study is "Why Do People Retire From Work Early?", an article by Robert J. Myers, Executive Director of the Commission. The views expressed in both reports are those of the authors and are not necessarily those of the Social Security Administration.

—Editor.

---

*Dr. Kingson is an Assistant Professor of Social Policy at the School of Social Work and Community Planning, University of Maryland at Baltimore. He is currently on leave to serve as an advisor to the National Commission on Social Security Reform. The findings presented in this article are based on research funded by the Department of Labor. The article draws on information presented in the health findings chapter of a monograph entitled **The Early Retirement Myth: Why Men Retire Before Age 62**, published by the House Select Committee on Aging in October 1981. The author wishes to express his appreciation to Professor James H. Schulz of the Florence Heller School at Brandeis University for his advice and assistance during the course of the research.

work before age 62—very early retirees (VERs). The term "very early retirees" includes persons certified as disabled before age 62. In fact, much of the analysis involves a comparison between the health of persons certified disabled by the Social Security Disability Insurance Program to those with work-limiting health problems at labor force withdrawal but not receiving Social Security disability benefits. This analysis leads to the conclusion that significant social inequities may exist as a result of the differential treatment of these two groups in terms of eligibility to the Disability Insurance Program.

Another aspect of the analysis concerns an investigation of an interaction between health and retirement income. Previous analysis (Quinn, 1978) finds an interesting interaction between health and retirement finances for white married men, finding that men in poor health are more likely to take advantage of pension incentives to retire early. This analysis explores a slightly different interaction that suggests health limitations reported at withdrawal may be more severe for men expecting to receive smaller pensions than for those expecting larger incomes.

## National Survey Data Used

The data used have been collected as part of the National Longitudinal Survey (NLS) of labor market experience of men. The data consist of the responses of men aged 45-59 in 1966 to personal, mail and telephone interviews in 1966, 1967, 1968, 1969, 1971, 1973 and 1975. The cohort of men aged 45 to 59 in 1966 is represented by a national probability sample of 5,020 men. The sample is representative of approximately 15 million noninstitutionalized men aged 45-59 in 1966. Black men have been oversampled to allow for more accurate comparisons between blacks and whites.

The findings reported in this article are based on four subsamples created from the NLS data. Two subsamples represent white (n = 222) and black (n = 115) men aged 53-59 in 1966 and permanently out of the labor force before age 62. If alive, the members of these subsamples would have been at least 62 by 1975. Two other subsamples represent white (n = 183) and black (n = 125) men aged 45-52 in 1966 and permanently out of the labor force before age 62. If alive, the members of these groups would *not* be 62 in 1975.

Combined, these four subsamples represent all noninstitutionalized men between the ages of 45 and 59 in 1966 who had permanently withdrawn from the labor force before age 62 during the nine-year period in which the data were collected, 1966-1975. Though the distinction between black and white very early withdrawees is maintained, the distinction between younger and older VERs is ignored in the following analysis.

Assignment of cases to the subsamples is based on similar criteria: "Race"; "Age at Beginning of Survey"; "Permanent Withdrawal Status," and "Age at Permanent Withdrawal." The definition of "Permanent Withdrawal" is based on being out of the labor force for at least two consecutive surveys as of 1975.*

By using conservative definitions of "Permanent Labor Force Withdrawal," only men who are highly unlikely to return to work have been selected. Another advantage of this method of creating subsamples is that even though someone may have been over 62 or deceased during the 1975 survey, he was included in a subsample if he met the appropriate criteria. This approach maximizes sample sizes and allows for analysis of mortality rates. It also develops subsamples that approximate the men aged 45-59 in 1966 who left the labor force before age 62 between 1966-1975.

## Three Groups of VERs Compared

The present analysis involves comparisons between groups of very early retirees in terms of their health. Accordingly, very early retirees have been disaggregated into three groups: 1) those who receive Social Security disability benefits—the Disabled group; 2) those reporting work-limiting health conditions at withdrawal but not receiving Social Security disability benefits—the Unhealthy group, and 3) those who do not report work-limiting health conditions at withdrawal—the Healthy group. Most of the findings reported here involve comparisons between the Disabled and Unhealthy groups.

Occasionally, it is necessary to base the comparisons on different subsamples of very early retirees. For example, much of the analysis involves comparisons between VERs defined as leaving work between 1966-1973. However, at some points we are only concerned with men who leave work in 1967 or later. The reasons for changing the subsampling structure are presented at the appropriate point in the description of the findings.

---

*Two criterion variables were used to develop a definition of permanent labor force withdrawal. The major one was a question that was repeated in 1966, 1967, 1968, 1969, 1971, 1973 and 1975—"What were you doing during most of last week—working, looking for work or something else?" Two of the categories used for coding purposes were "retired" and "unable to work." The other criterion variable was "Reason for Non-interview." This question was repeated in 1967, 1968, 1969, 1971, 1973 and 1975. The reasons given for not interviewing a member of the NLS sample were: "deceased"; "institutionalized"; "refused," and "unable to locate or contact."

All permanent labor force withdrawees were out of the labor force for at least two consecutive surveys as of 1975. At the beginning of the consecutive surveys, they indicated they left the labor force due to "retirement" or being "unable to work." After the first year of permanent withdrawal, being out of the labor force was defined as being either "retired," "unable to work," "deceased" or "institutionalized."

One exception was allowed. Men were also included in the subsample if they met the following rules: They had to be out of the labor force for at least three consecutive surveys as of 1975. At the beginning of the consecutive survey periods, they indicated for at least two periods in a row that they were out of the labor force due to "retirement" or being "unable to work." After the first two survey periods of permanent withdrawal, being out of the labor force was defined as either "retired," "unable to work," "unable to locate or contact," "refused," "institutionalized" or "deceased."

Table 1 gives a breakdown of the three types of VERs. It shows that 85 percent of white and 91 percent of black very early withdrawees have either reported that health prevents or limits their work and/or have medically certified disabilities that have enabled them to receive Social Security disability benefits.

Considering the conservative definition of "permanent labor force withdrawal," the subsamples are quite large. They represent about 12 percent (1.8 million) of the 15,020,000 noninstitutionalized men who were aged 45–59 in 1966.

## Findings Have Policy Implications

Determining the distribution of health problems among VERs has important policy implications. For example, if we find that the health of the Disabled group is much worse than that of the Unhealthy group, we would be forced to conclude that there is very little reason to "liberalize" eligibility requirements for Disability Insurance to meet the needs of Unhealthy VERs.

Mortality rates provide a direct means of illustrating the effect of health problems. One would expect high death rates to be associated with health conditions that limit the ability to work. In terms of VERs, the expectation is that the mortality rates of the Disabled and Unhealthy groups should be high if their work-limiting conditions are legitimate.

*A very large proportion of Disabled and Unhealthy VERs is dead by 1975* (*see Table 2*). *Even more notable is the finding that the incidence of death is greater among Unhealthy in contrast to Disabled VERs.* It would seem the reported health problems of the Unhealthy group are quite real.

What explains this surprising finding? The simplest explanation may be that many VERs die while in the process of applying for disability benefits or before they get a chance to apply. This notion is supported by the data showing three times as many Unhealthy as opposed to Disabled VERs die within two years of being recorded by our study as permanent labor force withdrawees. An unintended outcome of the administrative process associated with disability insurance claims may be to deny needed income to a few unhealthy VERs in the final months of their lives.

Table 1 THREE TYPES [a] OF VERY EARLY RETIREES (VERs)

| | *Disabled VERs* | *Unhealthy VERs* | *Healthy VERs* |
|---|---|---|---|
| White<br>(n = 397) | 51% | 34% | 15% |
| Black<br>(n = 234) | 55% | 36% | 9% |

[a] "Disabled" very early retirees receive Social Security disability insurance benefits. "Unhealthy" VERs report at labor force withdrawal that health limits their work but do not receive Social Security disability insurance benefits. "Healthy" VERs do not report health limitations on work at labor force withdrawal.

Table 2 MORTALITY RATES FOR THREE TYPES [a] OF VERs

| | *Disabled VERs* | *Unhealthy VERs* | *Healthy VERs* |
|---|---|---|---|
| *Percent Deceased by 1975* | | | |
| White* | 33%<br>(n = 191) | 42%<br>(n = 129) | 15%<br>(n = 59) |
| Black | 37%<br>(n = 123) | 52%<br>(n = 82) | 48%<br>(n = 21) |
| *Percent Deceased Within Two Years of Permanent Labor Force Withdrawal* [b] | | | |
| White | 7%<br>(n = 191) | 26%<br>(n = 129) | 10%<br>(n = 59) |
| Black | 11%<br>(n = 123) | 28%<br>(n = 82) | 29%<br>(n = 21) |

* Significant at ALPHA = .01

[a] See footnote a in Table 1.

[b] This section of the table presents the proportion of men who died within two years of the survey year in which they are recorded as permanently withdrawing from the labor force.

There are other plausible explanations. Disability insurance recipients are eligible for Medicare benefits, and they are assured of a steady stream of income. It is possible that the health and income benefits connected to receipt of disability insurance translate into fewer deaths than would otherwise be the case. Another explanation may be that people who are adept at successfully negotiating the disability claims process are also adept at negotiating the medical system to receive life-sustaining services. Finally, psychological benefit may also be derived from being officially declared disabled and, therefore, unable to work. The psychological effect of validating illness may have positive physical effects, leading to reduced death rates among persons with health limitations. *In any event, the reported findings make it crystal clear that the Unhealthy group of VERs is not composed of malingerers.*

## Blacks' Mortality Rate Is High

Another finding is that one-half (48 percent) of the Healthy black very early retirees are dead by 1975. It is possible that this finding is an artifact of a small subsample (n = 21). However, despite the small sample size, it is highly unlikely that random error can explain the fact that 10 out of 21 Healthy blacks as opposed to nine out of 59 Healthy whites died by 1975. Another explanation could be that black men aged 45–65 have somewhat shorter life expectancies than similarly aged white men. But the differences in mortality rates between Healthy white and black VERs are too great to accept this as an explanation.

The most interesting notion is that the high rate of death among Healthy black VERs is related to lack of income and medical care opportunities. Unlike the Disabled black VERs, Healthy black VERs do not have access to Medicare benefits; they therefore may be less likely to receive hospital care should the need arise. Also, disability recipients are assured a steady stream of income, whereas many Healthy black VERs are not. Unlike Healthy white VERs, other study findings show that the aggregate income position of the Healthy black group is quite small (Kingson, 1981). In addition, among Healthy black VERs there is a high correlation (r = .53) between life status in 1975 and retirement income at an earlier date, suggesting the likelihood that being alive in 1975 among Healthy black VERs is positively associated with retirement income. (Though this finding is significant at the .05 level, it should not be over-emphasized since it is based on a sample of 11 and, therefore, is likely to be unstable.)

## Functional Health Limitations of Surviving VERs

Table 2 shows that a large proportion of Disabled and Unhealthy VERs die by 1975. It also suggests that, as a group, Unhealthy VERs may actually be "sicker" (defined in terms of propensity to die) than Disabled VERs. But what can be said about the relative health of those Disabled and Unhealthy VERs who are alive in 1975? Table 3 presents data on the health of Disabled and Unhealthy VERs who live until 1975. The Table 3 sample consists of men who meet the following three conditions: 1) permanently withdrawn from the labor force by 1971; 2) report a health problem at withdrawal, and 3) are alive in 1975.

The findings show *no significant difference in the degree of functional limitation between Disabled and Unhealthy VERs* who have withdrawn from the labor force in 1971 or earlier and survive until 1975. However, there is a comparatively high rate of functional dependence and a low rate of minor loss among Disabled whites. Though not statistically significant, the findings hint that health limitations among Disabled white VERs may, in fact, be more severe than those among Unhealthy whites.

Table 3 DEGREE OF FUNCTIONAL LIMITATION [a] IN 1971 FOR DISABLED AND UNHEALTHY VERs [b] WHO REPORT WORK-LIMITING HEALTH CONDITIONS IN 1971 [c, d]

| Degree of Functional Limitation | *WHITE* Disabled VERs n = 83 | *WHITE* Unhealthy VERs n = 49 | *BLACK* Disabled VERs n = 51 | *BLACK* Unhealthy VERs n = 25 |
|---|---|---|---|---|
| Functionally Dependent | 34% | 16% | 29% | 32% |
| Severe Loss | 27% | 27% | 31% | 20% |
| Moderate to Severe Loss | 18% | 27% | 16% | 24% |
| Moderate Loss | 7% | 6% | 6% | 8% |
| Minor Loss | 11% | 22% | 16% | 16% |
| No Loss | 4% | 2% | 2% | 0% |

[a] The Functional Limitation Index is constructed from detailed questions concerning physical limitations and their effect on the ability to work.

[b] See footnote a in Table 1.

[c] The men included in the sample have withdrawn from the labor force in 1971 or earlier.

[d] The findings reported in this table show that no significant difference (ALPHA = .05) exists between Disabled and Unhealthy VERs in terms of functional limitation.

## Onset of Health Problems Examined

Are the work-limiting health problems of Unhealthy VERs of long duration, or do they occur quite suddenly? Examination of the question facilitates speculation about whether health problems associated with very early withdrawal are unexpected obstacles to continued work and whether the problems have limited the ability of Unhealthy VERs to earn income throughout a major portion of their work lives.

The findings presented in Table 4 show that the Disabled and Unhealthy groups of VERs are heterogeneous in terms of the duration of health problems. Many experience sudden onset of health problems that seem likely to quickly limit their ability to work and probably result in rapid labor force withdrawal. Still others work for many years in spite of health problems. It is likely that the retirement of these men comes on more gradually.

Though not significant, the findings presented in Table 4 also suggested *the health limitations of men in the Unhealthy VER subsamples are of greater duration than the limitations of the Disabled*. Of course, we should not overlook the large proportions of all groups reporting in 1966 the onset of their health limitation to be within the previous five years. Among white VERs reporting work limitations in 1966, Table 4 shows that 52 percent of the Disabled VERs, in contrast to 40 percent of the Unhealthy ones, have experienced the limitations for less than six years. For blacks the contrast is still greater.

Table 4 DURATION, AS OF 1966, OF REPORTED HEALTH LIMITATIONS ON WORK IN 1966 BY ALL DISABLED AND UNHEALTHY VERs [a, b]

| Number of Years Health Has Limited Ability to Work [d] | *WHITE* Disabled VERs n = 114 | *WHITE* Unhealthy VERs [c] n = 88 | *BLACK* Disabled VERs n = 92 | *BLACK* Unhealthy VERs n = 58 |
|---|---|---|---|---|
| *Years* | | | | |
| 1-2 | 20% | 16% | 21% | 14% |
| 3-5 | 32% | 24% | 35% | 19% |
| 6-10 | 27% | 19% | 21% | 28% |
| 11-15 | 7% | 18% | 10% | 7% |
| 16-20 | 4% | 11% | 9% | 16% |
| 21 + | 10% | 11% | 4% | 17% |

[a] The subsample includes men who permanently withdraw from the labor force by 1973 and are classified as either Disabled or Unhealthy VERs.

[b] "Disabled VERs" refers to men who receive disability insurance benefits by 1973.

[c] See footnote a in Table 1.

[d] The findings presented are not significant at ALPHA = .05.

## Work Limitations Precede Withdrawal

*Prior to permanent labor force withdrawal, only two-fifths of the Unhealthy white and black VERs report in 1966 that health did not limit their ability to work* (see Table 5). The statistics are virtually the same for black Disabled VERs. However, a significantly higher proportion (53 percent) of the white Disabled group reports health has no effect.

The finding suggests that most Disabled and Unhealthy VERs experience work limitations at least one year in advance of their permanent labor force withdrawal. More surprisingly, *it seems that among whites a significantly larger proportion of Unhealthy VERs as opposed to Disabled VERs experiences work limitations at least one year in advance of permanent labor force withdrawal.* This supports the notion that the Disabled are more likely to move quickly into a position of being unable to work, whereas it is more likely that the work abilities and opportunities of Unhealthy VERs decline over a longer period of time.

## Interaction Between Health and Retirement Income

Now, let us turn attention to a slightly different analysis that does not distinguish among the three groups of VERs. The analysis involves a test of the following hypothesis:

> The health problems associated with VERs who report a work-limiting health condition at withdrawal are more severe for economically disadvantaged as opposed to advantaged withdrawees. This is also true when controlling for occupational status.

The hypothesis is based on the reasoning that men with minimal retirement income expectations will accept greater physical discomfort at work to maintain their flow of earnings than those with adequate retirement income expectations. It was expected an association would be found among men reporting work limitations at withdrawal, indicating a tendency for the health limitations of men with high retirement incomes to be less severe than those of men with low retirement incomes.

Table 5 REPORTED HEALTH LIMITATIONS ON WORK IN 1966 BY DISABLED AND UNHEALTHY VERs WHO WITHDREW FROM THE LABOR FORCE IN 1967 OR LATER [a]

| *Degree of Health Limitations on Work* | *WHITE** | | *BLACK* | |
|---|---|---|---|---|
| | *Disabled VERs* [b] *n = 135* | *Unhealthy VERs* [c] *n = 100* | *Disabled VERs* [b] *n = 79* | *Unhealthy VERs n = 58* |
| Prevents Work | 6% | 6% | 6% | 12% |
| Limits | 42% | 57% | 54% | 50% |
| No Effect | 53% | 37% | 39% | 38% |

* Significant at ALPHA = .05.

[a] The subsample does not include VERs who were permanently withdrawn from the labor force during the 1966 survey.

[b] "Disabled VERs" refers to men who receive disability insurance benefits by 1973.

[c] See footnote a in Table 1.

The analysis sample consists of men who report work limitations in 1971. The health measure is the Functional Limitations Index. The income measure is the ratio of family retirement income in the survey after labor force withdrawal to the combined median income for American families and individuals in that year. Occupational status (Duncan Scale) on the withdrawee's longest job is used as a control.

The Functional Limitations Index is a six-point scale that for the purpose of analysis is assumed to be interval. Occupational status is used as a control because of known associations between occupational and health problems. It, too, is assumed to be interval. Though the U.S. Department of Labor (DOL) Occupational Classification would be preferable as a control, the sample size is too small to allow its use.

The findings are all significant at the .05 level. Among white men reporting health problems at withdrawal, there is a −.19 correlation between their relative income positions after retirement and the degree of functional limitations experienced in 1971. When controlling for occupational status on their longest jobs, the correlation remains significant but is reduced to −.16. Among similar black men, the correlations are −.25 without a control and −.24 when occupational status is used as a control.

*The findings suggest the research hypothesis is true. Among white and black VERs reporting a work-limiting health condition at withdrawal, the findings show there is a negative and significant correlation at the .05 level between retirement income and degree of functional limitation in 1971.* Among these men, high retirement incomes are associated with less severe health problems in 1971, and low retirement incomes are associated with more severe disabilities. The relationships remain significant when controlling for occupational status on the withdrawee's longest job.

*This analysis implies that the health limitations reported at withdrawal tend to be more severe for VERs expecting to receive smaller retirement pensions than for those with higher income expectations.*

There seems to be a trade-off between willingness to persevere at work despite health problems and expected retirement income. *It appears that men with low retirement income expectations are willing to endure greater physical discomfort to maintain earnings than men with greater retirement income expectations.*

*The finding also has implications for the interpretation of retirement "decision" research.* As previously discussed, we know that "health" is often reported in retirement decision research as a reason for labor force withdrawal. *This finding suggests that, even when controlling for occupational status, a "rich man's" re-*

*ported work-limiting health problem has a tendency to be less severe than that of a "poor" man.* If the suggested interaction between the degree of functional limitation and expected retirement income exists, then the confounding influence of this interaction needs to be recognized in retirement decision models.

Another interesting, complementary interpretation of the findings can be made. The association between the degree of functional limitation and retirement income can also be attributed to the probability that people with major disabilities are less likely to receive large retirement incomes than people with limited disabilities. In fact, both explanations are plausible, and they are not mutually exclusive. For men reporting work limitations at withdrawal, the amount of retirement incomes may be causally linked to the severity of their health problems, and willingness to endure physical discomfort may be causally linked to expectations concerning the amount of retirement income.

## Groups' Differences Summarized

The foregoing analysis shows that the health of the Unhealthy group of VERs, when measured in terms of mortality rates and duration of work limitations, is slightly worse than that of the Disabled group. In terms of the degree of functional limitation, it seems the Disabled group may experience slightly more functional dependency. On balance, it would appear that the major difference between the two groups is that one receives Social Security disability benefits and the other does not. Comparisons between Healthy VERs and those defined as either Disabled or Unhealthy generally show significant differences between the health of the groups. The findings also support the research hypothesis that health problems associated with VERs who report work-limiting conditions at withdrawal are more severe for the economically disadvantaged than advantaged withdrawees.

More specifically, the analysis shows:

- A large proportion of Disabled and Unhealthy VERs is dead by 1975, suggesting that the health problems of these groups are quite real.
- As of 1975, the mortality rates of Unhealthy VERs (white—42 percent; black—52 percent) are higher than that of Disabled VERs (white—33 percent; black—37 percent).
- Surprisingly, half of the Healthy black men are dead by 1975. This is three times the rate for Healthy whites and approximately equal to the rate for Unhealthy blacks.
- Among VERs who withdrew from the labor force in 1971 or earlier and are alive in 1975, there is no significant difference in the degree of functional disability as of 1971 between Disabled and Unhealthy VERs. About 75 percent of both groups are rated in 1971 as experiencing moderately severe to total disabilities.
- As of 1966, the reported health limits of Unhealthy VERs are of greater duration than that of Disabled VERs. However, within both groups, there is considerable variation in terms of duration.
- Among Unhealthy and Disabled VERs who withdrew from the labor force between 1967-1973, about three-fifths reported in 1966 that health limited their ability to work.
- Among white and black VERs reporting a work-limiting health condition at withdrawal, high retirement incomes are associated with less severe health problems in 1971. This finding can be interpreted to indicate that men with low retirement income expectations are willing to endure greater physical discomfort to maintain earnings than are men with better retirement income outlooks.

Social equity—the treating of groups in similar circumstances in a similar manner—is a commonly agreed on goal of income maintenance policy. Comparisons between the Disabled and Unhealthy groups of VERs suggest gross violations of this principle may exist as it relates to eligibility in the Social Security disability program among men leaving work before age 62 and reporting work-limiting health problems.

## Social Security Treatment Questioned

Based on several measurements of health, the findings suggest there may be insufficient differences in the health of the groups termed Disabled and Unhealthy to justify differential treatment under the Social Security disability program. Moreover, the high mortality rate of the Unhealthy group suggests it is not composed of malingerers and has a legitimate claim to disability benefits.

This inequity seems to be compounded by the actuarial reduction in benefit levels that many members of the Unhealthy group experience on early receipt of Social Security retirement benefits and the arithmetical reduction in benefits resulting from a shortened period of contribution into the system. So, not only is the Unhealthy group ineligible for Social Security disability benefits, but its OASI benefits are permanently reduced as well.

*The major policy implication of the findings is that consideration should be given to changing the eligibility criteria for the Social Security and SSI disability programs in a manner that is more favorable to the interests of disabled and partially disabled VERs who currently do not receive disability insurance benefits.* The advantage of liberalizing the criteria in the SSI disability program in addition to the Social Security program is that protection would be extended to a small, but very vulnerable, group of Unhealthy very early retirees who presumably are subject to the same inequity under SSI eligibility procedures.

The implications of the findings do not complement current efforts to curtail the expansion of the Disability Insurance Program. However, it should be pointed out that the data are supportive of recommendations by the 1979 Advisory Council on Social Security to liberalize eligibility criteria in the Social Security and SSI disability programs in recognition of the special problems confronting older workers with health problems.

# Why Do People Retire From Work Early?

by Robert J. Myers*

This article examines the validity of a mortality study of early retirees by Dr. Eric Kingson. The Kingson study supports the hypothesis that men who retired early were very prone to have work-limiting conditions even though they were not awarded Disability Insurance benefits. This article maintains that Kingson's study is analytically faulty because of the procedure used to categorize the sample. In comparing groups of early retirees, Kingson combined two groups—(1) severely disabled persons who died before becoming eligible to receive Disability Insurance benefits and (2) early retirees who alleged work-limiting disability. He found that their combined mortality was higher than that of those who received Disability Insurance benefits. He then concluded that, for this reason, early retirees who alleged work-limiting disability really had such disabilities. However, this article contends that the mortality effects of the first group are so great as to mask any conclusions relevant to the two groups combined. The analysis here does not conclude that persons generally do not retire early because of poor health, but rather that the findings of Kingson's study, being based on faulty mortality analysis, are not conclusive.

A widespread belief exists that a considerable number of people who leave gainful employment before age 65 do so because of poor health. An extensive literature has been built up on this subject, as cited by Eric R. Kingson ("The Health of Very Early Retirees," pages 3–9 in this issue). In my opinion, the conclusions drawn in the various studies are based on erroneous or inadequate analysis and are not necessarily valid.

One basic flaw is that the analysis is usually based on survey material, the procedures for which frequently contain irremediable flaws—especially in considering questions of a substantive nature, such as health as it affects employment. For example, many people leave the labor market at an early age for such reasons as the preference to "take life easy," or because the difference between their subsequent income and their previous take-home pay is not very large, or because they just do not like their work. These persons do not necessarily admit the real underlying cause when asked in a survey. Conversely, of course, there are people who will not admit to being in poor health, even though they are. Thus, as a result, any data on self-reported health status, as it relates to employment, are of a very heterogenous and unreliable nature.

Dr. Kingson has attempted to validate the conclusion that a large proportion of early retirees who do not receive Disability Insurance benefits under the Social Security program retired because of work-limiting health conditions. This article examines the methodology in Kingson's report to see whether it is appropriate, and whether the conclusions drawn are therefore valid. In doing this, the actual extent of early retirement and the general weakness of the survey approach in many areas are described. Also discussed are the very considerable problems that occur in making analyses of mortality data.

It does not follow logically that, if early retirees have work-limiting health conditions, this is necessarily the reason they leave the labor force. These two variables can be, and often are, independent of each other. Many

* A Fellow (and Past President) of the Society of Actuaries, Mr. Myers is currently Executive Director of the National Commission on Social Security Reform. He was employed by the Social Security Administration in various actuarial positions from 1934 to 1970 (as Chief Actuary in 1947–70) and was Deputy Commissioner for Programs from 1981 to 1982. From 1970 to 1979, he was Professor of Actuarial Science at Temple University. The views expressed in this article are those of the author and are not necessarily those of the organization by which he is employed.

people with work-limiting health conditions do remain in the work force. In fact, it might be better for many such individuals—both psychologically and physiologically—to work, rather than be attracted by the availability of benefits at such a level that working brings in little net financial gain. This is, of course, not to say that there are not many people with work-limiting health conditions who really cannot work.

## Extent of Early Retirement

Before examining the question of the causes of early retirement, let us first examine the extent to which it has actually occurred in the United States, including for these purposes disability retirement as a form of early retirement. In essence, early retirement can most easily be seen by examining the other face of the coin—labor-force participation rates.

Let us consider only men; women present a more confusing picture, because many withdraw from the labor force to become homemakers and subsequently reenter the labor market. At ages 25–44, male labor-force participation rates were about 97–98 percent in the period following World War II, but decreased slightly during the 1970's to about 96 percent. For men aged 45–54, the rate was about 96 percent until the mid-1960's, and it then decreased steadily, reaching about 91 percent at the end of the 1970's. Similarly, for men aged 55–59, the rate was 90 percent in 1970, and it then decreased steadily and drastically, reaching 82 percent by the end of the 1970's. For men aged 60–64, the rate was 81 percent in 1960 (just before early retirement at ages 62–64 was first permitted under the Social Security program), and it decreased steadily thereafter, reaching 61 percent in 1980.

In many ways, it might be said that this downward trend in the labor-force participation rate for men is surprising, in view of such factors as declining mortality rates and the decreased extent of hard manual work, as automation has become more widespread.

## Weaknesses of Surveys

In recent years, there has been a proliferation of surveys, which are often developed by complex and expensive scientific sampling procedures and analyzed by sophisticated mathematical and statistical techniques. Too frequently, opinions and/or factual data are sought that are really impossible to obtain accurately.

The respondents often do not have sufficient knowledge to answer questions fully and accurately. In other instances, they feel that it may be in their best interest not to give truthful responses. Several examples will illustrate these points.

Many Social Security beneficiaries, when asked about their income and assets, might understate them. They may feel that, somehow or other, this information will be made known to the Government and will affect the amount of their Social Security benefits in the future (or even benefits already received).

Future fertility experience is often predicted by asking young women how many more children they would like to have. If this question is put to a newlywed woman, she may say that she would like to have many children. However, if such a question is asked of a woman who has had a baby or two, the answer might well vary, depending on various matters.

When opinions are elicited regarding desirable changes in the Social Security program, the form of question might be incomplete or slanted. Or the respondent may not be furnished sufficient information (possibly because there is not enough time to do so, or because the respondent could not absorb or understand all of the necessary background information). In some instances, the interviewees may not be aware that a proposed increase in benefit protection may result in a sizable increased tax burden to themselves, either through visible payroll taxes or through indirect general revenue taxes.

The question might be asked as to whether the minimum retirement age for unreduced Social Security benefits should be gradually increased over the years. The automatic answer might be "no" unless there is a full and complete presentation of why this would be done and what the cost consequences would be if it were not done. With such a full explanation, the answer might well be different.

Finally, a question might be asked as to whether the respondent is in favor of National Health Insurance, under which complete medical care would be provided without any direct charge related to the services furnished. Quite different answers might occur, depending on whether more detail is given as to how the costs would be met, how they would impinge upon the respondent, and how the methods of delivery of medical care would be changed.

## Is Early Retirement Caused by Health Conditions?

Quite obviously, many people are compelled to retire before the "normal" retirement age because of health conditions. Certainly this is the case for the approximately 2.7 million persons currently receiving Social Security disabled-worker benefits. In addition, many individuals are significantly impaired and have considerable difficulty in working but do not meet the strict standards of the Social Security disability program.

On the other hand, it seems reasonable to believe that many individuals at the middle and older ages have left the paid labor force for a number of reasons but, when asked why, will say that they did so solely because of work-limiting health conditions. Actually, such individuals may have health conditions that are not sufficiently severe to preclude the performance of substantial useful work. The real reason for leaving work may have been that some other income was available (so that the after-tax effect of working did not seem worthwhile), or that the spouse was employed and brought in sufficient income, or that working was just too unpleasant, or some combination of these reasons. Then, because of the general acceptability and underlying inherent belief in the work ethic and because of the need to "maintain face," respondents to surveys will often give poor health as the reason for withdrawal, because this is the "socially-acceptable" answer.

I cannot, of course, give any solid factual evidence that this is so, but rather base my views on general reasoning as it relates to people in the real world. I believe that surveys dealing with questions of this type cannot produce valid data. This would be the case even if the surveys were made by medical teams that spent considerable time with each respondent, instead of the usual procedure of having a survey-taker who is not knowledgeable about the subject being discussed fire a long battery of questions at the interviewee.

Dr. Kingson believes that, in a large proportion of the early-retirement cases, the individual left the labor force because of work-limiting health conditions. He attempts to prove this by making a mortality analysis of three categories of persons in a longitudinal survey of men:

(1) Those who received Social Security Disability Insurance benefits at any time.

(2) Those who asserted that they left the labor force because of a work-limiting health condition, but who did not receive Social Security Disability Insurance benefits at any time.

(3) Those who retired early and stated that they did not have a work-limiting health condition.

According to the Kingson study, the mortality rate of the second group—the "unhealthy" early retirees who did not qualify for Disability Insurance benefits—was much higher than that of early retirees who stated that they were in good health. Also, surprisingly, somewhat higher mortality was shown for the "unhealthy" early retirees than for those who had received Disability Insurance benefits. The specific results are shown in table 1, from which it may be seen that, for white men, 42 percent of the "unhealthy" early retirees died in the survey period, compared with 33 percent of those who had received Disability Insurance benefits and only 15 percent of the "healthy" early retirees. The corresponding figures for black men were 52 percent, 37 percent, and 48 percent; the unexpectedly high level of the last figure—for healthly early retirees—cannot be explained.

From these results, Kingson draws the conclusion that the early retirees with work-limiting health conditions really were severely disabled and that it is therefore proven that they withdrew from the labor market because of disability. It is my contention that this mortality analysis is faulty in both its theory and its methodology and that, therefore, Kingson has not proven the point that early retirees who assert that they have work-limiting health conditions really retire because of such conditions.

**Table 1.**—Percent of men who retired before age 62 dying before end of study period of Kingson study [1]

| Race | Received Social Security Disability Insurance benefits [2] | Did not receive Social Security Disability Insurance benefits [2] | |
|---|---|---|---|
| | | Unhealthy [3] | Healthy [3] |
| Number in sample: | | | |
| White | 191 | 129 | 59 |
| Black | 123 | 82 | 21 |
| Percent dying during period: | | | |
| White | 33 | 42 | 15 |
| Black | 37 | 52 | 48 |
| Percent dying within 2 years of withdrawal from labor force: | | | |
| White | 7 | 26 | 10 |
| Black | 11 | 28 | 29 |
| Percent dying 2 years or more after withdrawal from labor force: | | | |
| White | 26 | 16 | 5 |
| Black | 26 | 24 | 19 |

[2] As of any time on an inquiry date in the study period.

[3] By "unhealthy" it is meant that the individual reported some health-related limits on work ability at the time of withdrawal from the labor force.

## Pitfalls in Mortality Analysis

Before dealing with the particular case that Kingson has considered, let us first examine some of the pitfalls in the field of mortality analysis awaiting those who do not have training in actuarial science. (This does not, however, imply that these "more obvious" types of pitfalls are not understood by Kingson.)

One example is the analysis of mortality between two categories by looking only at the crude (or aggregate) death rate. Thus, for instance, the death rate for a Florida retirement community might well be considerably higher than that for a college town. However, quite obviously, this would by no means indicate that health conditions in the former are much worse than in the latter. What is missing, of course, is the fact that the relative age distributions of the two localities were not considered.

Another example involves the relationship between life expectancy and the statutory minimum retirement age. In 1935, when age 65 was selected as the minimum retirement age for the Social Security program, the expectation of life at birth was only about 62 years. Does this mean—as some critics at the time said—that 65 was a ridiculously high retirement age, because nobody would live that long? Such statements were made despite the fact that about 7 1/2 million persons were then aged 65 or over! What was really the case under mortality conditions then was that almost half of a group of new-born babies would live until age 65—and then such survivors would have an average life expectancy of about 12 1/2 years thereafter.

Yet another pitfall in mortality analysis occurs in connection with determining the average length of widowhood. As an example, consider the case of a husband and wife who are both aged 65 and whose mortality in the future follows that of the U.S. Total Persons Life Tables for 1969–71.[1] These tables show a life expectancy for men of 13.49 years and a life expectancy for women of 17.33 years. At first glance, it could be concluded that the average period of widowhood would be 3.84 years. However, this would be incorrect, because the average years of widowhood for those women who become widows (approximately two-thirds of the total group) is calculated to be 7.36 years.[2]

## Mortality Analysis by Kingson

As indicated previously, Kingson made a mortality analysis of the three categories of individuals who had withdrawn from the active labor force before age 62. His mortality analysis consisted of computing, for each group, the proportion of individuals who died within the observation period of approximately 9 years. It is my belief that the procedure used involved several technical weaknesses, so that any results obtained are inconclusive.

First, no account was taken of the different time periods of exposure to the risk of death of the various persons involved, which could have been significantly different among the three categories. Second, the category involving people who were "unhealthy" early retirees and who did not receive Social Security Disability Insurance benefits before the end of the survey period (or before death, if earlier) was a very heterogeneous one. In essence, it consisted of two subcategories: (1) persons who were so seriously disabled that they died before the end of the 6-month waiting period for disability benefits[3] (or even later if their claim was still in the adjudication process), and (2) persons who may or may not have been in good health but who were not disabled sufficiently to qualify for Disability Insurance benefits.

The first subcategory consists entirely of individuals who were obviously in very poor health, while the second subcategory includes some persons who may have been in excellent health and some who may have been in poor health. The resulting high mortality for the combined group would, therefore, not necessarily be indicative of poor health for all the persons therein.

The procedure followed by Kingson could lead to inconclusive results. This is demonstrated when one assumes a certain composition for a group of "unhealthy" cases, as between two categories: (1) those who are so severely disabled that they die before completing the waiting period for Social Security benefits, and (2) those who claim to have work-limiting conditions but do not qualify for Disability Insurance benefits, even though they survive beyond the waiting period. The null-hypothesis approach is taken, by assuming that persons in the latter category have normal mortality. Then, it will be shown that the result of combining the two categories is that the group as a whole has very high mortality—and, in fact, even higher mortality than for those on the disability benefit rolls—even though one category has normal, low mortality.

I have made the following empirical, but reasonable assumptions as to individuals who withdraw from the labor force and who allege that they have work-limiting health conditions:

(1) 1,000 persons withdraw from the labor force at each year of age from 55 through 61.

(2) 20 percent of the withdrawals do not receive Disability Insurance benefits and do not die in the waiting period (the first 6 months after disablement). This group excludes not only those who become disabled-worker beneficiaries but also those who are so severely disabled that they would have received Disability Insurance benefits if they had survived the waiting period.

(3) The other 80 percent of the withdrawals are divided into two categories—8 percent who die in the first 6 months (and who otherwise would have received Disability Insurance benefits if they had survived) and the remaining 72 percent who are severely disabled for at least 6 months and who, therefore, go on the disability benefit rolls.

(4) The mortality rates for the persons who allege that they are unhealthy but who do not die in the first 6 months and do not later receive Disability

---

[2] For more information on this, see Robert J. Myers, "Statistical Measures in the Marital Life Cycles of Men and Women," **Proceedings**, International Population Conference, United Nations, Vienna, 1959. For another example of the difficulties involved in mortality research, see Robert J. Myers, "An Instance of the Pitfalls Prevalent in Graveyard Research," **Biometrics**, December 1963.

[3] Although the waiting period is often referred to as being 5 months, at least 6 months always elapses between the date of disablement and the date of eligibility for the first benefit check (which is payable only if the beneficiary is alive and disabled at the end of the sixth month following the month of disablement).

Insurance benefits (that is, the category described in item (2)) are assumed to be those of the U.S. Total Males Life Table for 1969–71.[4] In other words, the basic hypothesis is that this category is not really unhealthy, as its members allege.

(5) The mortality rates for persons who are severely disabled and who survive the waiting period (that is, the second category described in item (3)) are assumed to be 10 percent in the first year on the benefit rolls and 5 percent per year thereafter.[5]

The results from this model, based on terminating the study period at attainment of age 62 for those who survive thereto, are shown in table 2 for each of the three categories separately (and also for the combination of the two categories that Kingson compared). The category of those who receive Disability Insurance benefits showed the relatively high mortality of 18 percent within the investigation period.

Quite naturally, the mortality of the category of those dying within the first 6 months after disablement (who would have received disability insurance benefits after the waiting period if they had lived) was extremely high—100 percent, by definition. Similarly, for those who alleged that they withdrew from the labor force because of work-limiting health conditions, only about 7 percent died within the investigation period—as would be anticipated, because it was hypothesized that they have normal mortality. However, when the last two categories are combined—as Kingson did—the proportion that died within the investigation period was 34 percent, or almost double the rate for those who actually received disability benefits.

Such a comparison would seem to lead to the following two conclusions (as it did for Kingson in his study):

(1) The group of people who left the labor market with an alleged work-limiting health condition and did not receive Disability Insurance benefits (including all who died in the first 6 months after withdrawal) were subject to relatively high mortality (because, for the entire group, it was higher than that for disabled-worker beneficiaries).

(2) Therefore, these early retirees as a group were really in poor health, and this must have caused withdrawal from the labor market in all cases.

**Table 2.**—Percent of men who retired before age 62 dying before end of study period in Myers model [1]

| Category | Total persons in category | Total deaths | Percent dying |
|---|---|---|---|
| Received Disability Insurance benefits | 5,040 | 886 | 18 |
| Did not receive Disability Insurance benefits | 1,960 | 664 | 34 |
| Died in first 6 months | 560 | 560 | 100 |
| Lived at least 6 months [2] | 1,400 | 104 | 7 |

[1] See text for description of model.

[2] The persons in this category also alleged themselves to be "unhealthy" (that is, they reported some health-related limits on work ability at the time of withdrawal from the labor force).

And yet we know that this is not the case for the entire group, because the assumption was made that some of them had normal mortality—namely, those in the category who survived for 6 months but did not qualify for Disability Insurance benefits, and who alleged that they were unhealthy. Therefore, it can properly be concluded that the method of mortality analysis used by Kingson produced results that are inconclusive, because the group consisted of two categories that greatly differed as to mortality characteristics, and the effect of the high-mortality category biased the results irreparably.

## Summary

The analysis in this article indicates that the method of mortality analysis used by Kingson in analyzing the health condition of persons who withdraw from the labor market with self-assessed work-limiting health conditions and who never receive Social Security Disability Insurance benefits is inconclusive because of the procedure adopted for categorizing the sample. The group so defined consists of one category that definitely has extremely high mortality and another category that may or may not have mortality any different than normal. The mortality effects for the first category are so substantial that they can readily mask the results for the two categories combined, so that no valid conclusions can be drawn for the second category alone. The only valid technical approach would have been to separate out each of the two categories and make the analysis on a precise basis by having the actual dates of disablement and, where applicable, the dates of first *eligibility* for Disability Insurance benefits.

It is recognized that the approach of building a model that hypothesized that those in a certain category withdrew from the labor market and alleged work-limiting health conditions, but really had normal mortality, is not precisely the same approach that Kingson followed. However, my simplified model is not too different from his approach, and it clearly shows that consideration of only the heterogeneous group of persons who withdraw from the labor force and do not receive Social Security Disability Insurance benefits can well lead to inconclusive results. It is also recognized that the data with which Kingson had to operate were not available in proper form to make a technically accurate investigation. Nonetheless, the fact remains that such data as were available and the methodology applied thereto were such that conclusive results were not possible.

---

[4] See footnote 1.

[5] These approximate rates—as well as the assumption of a mortality rate of 10 percent in the first 6 months of disablement—are consistent with the more detailed rates by age at entitlement to disability benefits according to the actual experience under the Social Security program (see Bruce D. Schobel, **Experience of Disabled-Worker Benefits Under OASDI, 1974–78** (Actuarial Study No. 81), Office of the Actuary, Social Security Administration, April 1980).

# Notes and Brief Reports

## Cash Benefits for Short-Term Sickness, 1979*

Every year many workers become sick or suffer accidents away from their jobs and so cannot work for temporary periods ranging from a few days to several months. Although there is no Federal social insurance program to protect against this risk, the majority of workers are nevertheless protected through State programs, industry programs, or private sector programs. Five States (California, Hawaii, New Jersey, New York, and Rhode Island), Puerto Rico, and the railroad industry have Temporary Disability Insurance (TDI) laws requiring employers to cover their workers under a plan that pays a benefit replacing about half the worker's wage. Many other workers are able to obtain protection through plans offered by their employers. Employers offer their employees sick-leave plans or sickness insurance as a fringe benefit or as part of a labor-management collective bargaining agreement.

In 1979, about 56 million American workers were covered under TDI or voluntary plans that provided cash benefits to replace earnings when they were sick. Workers so covered comprised more than three-fifths of all workers. They received a total of $13.4 billion in benefits.

Total estimated earnings loss in 1979 from sickness was $36.0 billion. Total sickness benefits paid as a percent of income loss in 1979 was 37 percent. This rate represented a slight rise over the 36 percent reported for 1978. The income loss estimate encompasses short-term disability of the institutionalized population and their first 6 months of long-term disability.

In this note, the definition of income lost due to nonwork-connected disability is limited to losses in the self-employment and wage and salary earnings during the first 6 months of disability.

To help estimate income lost through sickness, the Social Security Administration has developed a sickness index which is compiled each year. The index is applied to the annual average number of work-loss days used in estimating the value of income loss. This index is based primarily on Public Health Service information reported in the **Health Interview Survey** on the number of lost work days, restricted activity days, and bed-disability days from acute sickness during the year.[1] In 1979, the index was 99, down from the 101 reported in 1978, with the base being 100 in 1958.

The income loss estimate includes actual income loss as well as income that would be lost if it were not for sick-leave plans that continue wages during illness. Accordingly, payments made by these plans are included in the benefit data.

### Scope of Protection

#### Types of Plans

Three of the most common group protection plans against loss of earnings during periods of short-term nonoccupational disability are (1) insurance plans from commercial insurance companies, (2) self-insurance plans including the Administrative Services Only (ASO) plan, and (3) sick-leave plans. Of course, workers may, as individuals, purchase insurance policies to supplement the protection provided on the job. The benefits through individual insurance are included in this series although in some cases they may not be wage replacement income. For example, some individual policies provide flat rate periodic cash benefits upon proof of hospitalization.

**Group insurance.** Most wage and salary workers in private industry with protection are covered through group insurance policies sold by commercial insurance companies that pay cash amounts during specified periods of disability. Insurance plans generally provide partial wage replacement of one-half to two-thirds after a waiting period ranging from 3 days to a week. Potential duration of benefits may vary by length of work experience or, more commonly, may be for some fixed number of weeks for all workers under the plan, the maximum set most commonly at 26 weeks.

---

*By Daniel N. Price, Division of Retirement and Survivors Studies, Office of Research and Statistics, Office of Policy, Social Security Administration. For a detailed treatment of this subject, see Daniel N. Price, "Income Replacement During Sickness, 1948–78," **Social Security Bulletin**, May 1981, pages 18–32.

[1] In deriving the sickness index, the **Health Interview Survey** data are used as a measure of year-to-year change rather than as the measure of average number of income days lost because of several significant conceptual differences between that survey and the SSA series. The main differences are that the survey excludes the noninstitutionalized population and the work loss experienced by individuals no longer currently employed, both of which groups are in the SSA estimates.

**Self-insurance.** Employers may self-insure, providing cash benefits directly through funds they have set aside. Some unions, union management, trust funds, fraternal societies, and mutual benefit associations also pay cash disability benefits. In recent years, increased use has been made of the Administrative Services Only (ASO) plan by employers who self-insure. Under the ASO plan, the employer assumes the risk of loss and contracts with the insurer only to perform various administrative tasks related to workers' claims, including payment of claims out of the employer funds. About 1 million workers were under ASO plans in 1979.

**Sick leave.** The sick-leave plan is another major means of maintaining a worker's wage when he or she cannot work because of illness or accident. In contrast to insurance plans, sick-leave plans—especially in government employment—often provide full replacement of lost earnings without a waiting period. In most cases, such leave is payable for a maximum of 5-30 days. Another use of sick leave is as a supplement to benefits provided by insurance. These sick-leave plans provide income during waiting periods under the insurance plan or pay a supplemental benefit above the amount provided by insurance.

## Coverage Levels

In 1979, 56 million wage and salary workers were covered by a formal sick-pay insurance or sick-leave plan. This number represented 63 percent of all wage and salary workers, a slightly lower proportion than the 65 percent in 1978.

As shown in table 1, an estimated 42 million of these workers were in private industry, 17 million were in TDI jurisdictions, and 25 million in voluntary plans. About 57 percent of all private industry wage and salary workers were covered. Excluding the TDI jurisdictions, about 44 percent of other private industry employment was covered in 1979.

The remaining 14 million covered wage and salary workers were in government employment. Sick leave for government workers is mostly a full-pay benefit with no waiting period. This type of plan is generally considered "exclusive sick leave," that is, sick leave intended to be the worker's exclusive protection against income loss that otherwise would occur, rather than leave intended to supplement an insurance benefit. A large majority of government employees—89 percent—had coverage.

**Table 1.**—Degree of income-loss protection against short-term sickness for all employed wage and salary workers in private industry and for those not under temporary disability insurance laws, selected years, December 1954-79

| December | Total number (in thousands) [1] | With protection | |
|---|---|---|---|
| | | Number (in thousands) [2] | Percent of total |
| | All wage and salary workers | | |
| 1954 | 43,000 | 25,600 | 59.5 |
| 1956 | 46,000 | 27,700 | 60.2 |

| 1979 | 56,200 | 24,800 | 44.1 |

[1] For areas not under temporary disability insurance laws, total excludes railroad workers and is adjusted by ratio of private industry employees on nonagricultural payrolls in the States with temporary disability insurance laws to all such employees. Data from Bureau of Labor Statistics, **Employment and Earnings**. Beginning with 1968, data not strictly comparable with that for earlier years. Labor-force information for 1968 and thereafter excludes those aged 14-15 and includes certain workers previously classified as self-employed.

[2] Estimated number of private-industry workers (1) with group accident and sickness insurance (except group credit insurance); (2) under paid sick-leave plans; (3) under union and mutual association plans; and (4) in State-operated temporary disability insurance funds. Beginning with 1964, group accident and sickness insurance coverage has been adjusted to exclude those with long-term benefit policies, which usually do not provide short-term benefits. Estimates of private protection based on data from Health Insurance Association of America and from State administrative agencies.

## Current Plan Characteristics

Although sick leave and insurance plans both offer income-loss protection for sickness, they operate in different ways. A recent survey by the Bureau of Labor Statistics (BLS) describes some current features of these two types of benefits in private industry.[2] The following data, however, must be taken as illustrative, but not necessarily fully representative of all private industry plans. The BLS survey was designed to represent 21 million wage and salary workers in 1979—a large number, covering most industries, but still not necessarily representing all 71 million wage and salary workers in nonagricultural private industry employment since certain important groups, particularly workers in small firms and temporary, part-time, and seasonal employees were excluded.

---

[2] Bureau of Labor Statistics, Department of Labor, **Employee Benefits in Industry: A Pilot Survey**, Report 615, July 1980.

**Insurance plans.** Among workers protected by accident and sickness insurance, potential duration of benefits varied notably by type of benefit payment formula, but overall, half were in plans paying up to 26 weeks. Duration for insurance plans generally is on a per sickness basis although some set a time limit that can be used during the calendar year. As can be seen in table 2, about one-third of the workers under insurance plans were paid a fixed benefit amount and another third were paid a fixed percentage of their earnings; the rest were in plans that varied benefits according to length of service, disability, earnings, or other criteria. The BLS study also reported that for most workers under a fixed benefit plan, the fixed amount ranged from less than $60 to $119 per week, or 50–69 percent of earnings.

**Sick-leave plans.** Table 3 shows data for private industry workers in sick-leave plans distributed according to the maximum duration of leave and years of service required. Among those with less than 1 year of service, the employee at the midpoint in the distribution of days covered was entitled to a maximum of 11 days. After 5 years of service, an employee at the midpoint was entitled to up to 21 days of sick leave. Workers on the job longer than 5 years received very little extra sick-leave protection.

**Table 3.**—Paid-sick leave: Percent of full-time employees, by number of paid sick-leave days provided per year at selected years of service, 1979

| Years of service | All employees | Covered days of sick leave | | | |
|---|---|---|---|---|---|
| | | Under 5 | 5–9 | 10–29 | 30 or more |
| Less than 1 | 100 | 13 | 35 | 33 | 20 |
| 1 or more | 100 | 9 | 33 | 43 | 15 |
| 5 or more | 100 | 6 | 26 | 36 | 32 |
| 10 or more | 100 | 6 | 26 | 34 | 34 |
| 20 or more | 100 | 6 | 26 | 34 | 34 |

One type of provision that interacts with benefit amount and benefit duration limits is a provision to integrate sickness benefits with other benefits being received from income-maintenance plans. A recent study, conducted by Charles D. Spencer and Associates,[3] pointed out provisions that sometimes are included in sickness insurance plans to prevent duplication of benefits. The following tabulation shows the percentage of sickness insurance plans that reduce (offset) the sick-pay benefit because of a worker's eligibility for benefits from other programs.

| Percent of plans that offset sickness benefits | Reason for offset |
|---|---|
| 7 | Workers' compensation |
| 20 | TDI and Social Security disability benefits |
| 7 | Other (company paid) |

## Type and Amount of Benefits

Table 4 shows the estimate of benefits paid to workers for sickness in each year from 1948 to 1979. The $13.4 billion total for 1979 was composed primarily of payments received from group plans established on a voluntary basis through the worker's job ($10.6 billion), or through social insurance (TDI—$1.2 billion and Social Security—$0.2 billion). The remaining payments ($1.3 billion) were made as a result of individual insurance policies. As can be seen from table 4, sick-leave payments account for the largest part of aggregate benefits paid—$4.9 billion to government employees and $3.1 billion to private industry employees. These payments were 67 percent of the $12.0 billion in group sickness benefits paid to workers in private industry and government combined.

The 1979 sick-pay benefits total represented a 14-percent rise over the preceding year, compared with an 11-percent growth in 1978 and an 8-percent gain in 1977. In

**Table 2.**—Accident and sickness insurance: Percent of full-time employees, by number of weeks covered and by type of benefit payment, 1979

| Type of benefit payment | Total | Weeks covered | | | | |
|---|---|---|---|---|---|---|
| | | Total | Less than 26 | 26 [1] | 52 [2] | Varies by service |
| Total | 100 | 100 | 15 | 52 | 18 | 14 |
| Fixed percent of earnings | 34 | 100 | 15 | 70 | 6 | 9 |
| Percent variable by length of service and/or disability | 17 | 100 | 6 | 28 | 44 | 22 |
| Fixed weekly dollar amount | 31 | 100 | 29 | 55 | 10 | 6 |
| Weekly dollar amount variable by earnings or other | 17 | 100 | 6 | 41 | 24 | 29 |

[2] Includes 1 percent with more than 52 weeks.

---

[3] "The Short of It: Survey Examines Sick Leave, Accident and Sickness, Short-Term Disability Plans," **Employee Benefit Plan Review**, October 1980.

fact, the 1979 increase was the largest since 1971, primarily due to the increase in payments made under group insurance policies, particularly in voluntary plans. Voluntary private industry insurance paid $2.7 billion in benefits during 1979, 40 percent more than in 1978. This large reported increase resulted partly from changes in some procedures for reporting information in 1979 and partly because some insurance companies that had not provided data earlier may have reported on their 1979 experience. Increases in sickness benefits paid from 1978 to 1979 were more moderate in other sectors, as shown in the column on the right.

| **Benefit plans** | **Percent increase in benefits paid** |
|---|---|
| Individual insurance | 9 |
| TDI payments | 12 |
| Sick leave: | |
| Private industry | 11 |
| Government | 7 |

## Health and Economic Changes

Two major factors influencing the annual changes in sickness benefits paid are the extent of sickness in the workforce and trends in employment and wages. As measured by the Social Security Administration's sick-

**Table 4.**—Income lost because of short-term sickness or injury and amount of sickness benefits paid, by type of worker and by type of coverage,[1] 1948–79

[In millions]

| Year | Income lost from short-term sickness | Sickness benefits paid | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | Total | | Types of coverage | | | | | | |
| | | | | | | Group benefits to workers in private industry | | | | |
| | | | | | | | | | Under public laws | |

[1] Short-term sickness refers to short-term or temporary non-work connected disability (lasting not more than 6 months) and the first 6 months of long-term disability. Data for 50 States and the District of Columbia.

[2] Beginning in 1973, includes benefits for the sixth month of disability payable under the Old-Age, Survivors, and Disability Insurance program, not shown separately.

[3] Group accident and sickness insurance and self-insurance privately written on a voluntary basis. Includes a small but undetermined amount of group disability insurance paid to government workers and to self-employed persons through farm, trade, or professional associations.

[4] Privately written group sickness insurance and self-insurance provided under private plans established in compliance with State temporary disability laws in California, New Jersey, and New York. Comparable data for Hawaii not available.

[5] State-operated funds in Rhode Island, California, and New Jersey; the State Insurance Fund and the Special Fund for the disabled unemployed in New York; and the cash sickness provisions of the Railroad Unemployment Insurance Act.

ness index, there was somewhat less sickness in 1979 than in 1978. Thus, the large increase in benefit payments occurred despite a slight decline in sickness.

The Department of Commerce reports on the number of employed civilians. Information for part-time workers and others who do not work a full week is combined to approximate an equivalent number of full-time workers, or "full-time equivalent" employment. Full-time equivalent employment rose from 1978 to 1979 by less than 4 percent to 83.8 million workers. This growth was less than the annual rate in 1978 (5 percent) and about the same as the 1976 and 1977 rates. Average civilian employee wages, on the other hand, grew at a slightly faster pace in 1979 (8 percent) than they had in 1978 (7 percent). The patterns in wages and employment during 1979 probably influenced the growth of cash sickness benefits to about the same extent as in the previous few years.

## Legislative Changes

In 1979, the 12-percent increase in benefits paid to workers protected by TDI laws was slightly larger than any other benefit increase reported, aside from the unusual growth noted under voluntary private insurance. Statutory weekly benefit maximums rose during 1979 in three of the TDI jurisdictions through provisions for automatic escalation:

| TDI jurisdiction | 1978 | 1979 |
|---|---|---|
| Hawaii [1] | $126 | $134 |
| New Jersey | 110 | 117 |
| Rhode Island | 91 | 98 |

[1] Hawaii statutory experience shown here and elsewhere is not reflected in table 4 because program experience data for Hawaii are not available.

In addition, California increased the availability of pregnancy benefits to any 6 weeks related to childbirth. (In 1980, this benefit became payable for the same duration as that for any other short-term disability—that is, up to 39 weeks in some cases.) However, 1979 marked the end of a unique California feature among TDI programs: the hospital care benefit payable to TDI beneficiaries was discontinued.

## Benefit-Income Replacement Rates

A useful measure of the extent to which sick-pay programs achieve their objectives is the ratio of aggregate benefits paid to the income lost due to sickness. This ratio is helpful to detect broad trends that may occur rather than to indicate a specific level of benefit adequacy. This distinction is important because the absolute level of the replacement rate must be understood to be a composite of diverse factors. For example, the ratio includes benefits provided through insurance, which are intended to replace only a part of the worker's wage and generally exclude the first 3–7 days of sickness. In contrast, benefits through sick-leave plans often provide a full replacement, immediate-pay type of benefit. Furthermore, the ratio developed for this series is based on income lost by all workers when sick, regardless of whether they were covered by a sick-pay plan. Thus, the ratio reflects the effects of a lack of protection for some workers, as well as the difference between benefits paid to a covered worker and his or her total income loss.

Table 4 shows that the ratio of benefits to income loss was 37 percent in 1979. This rate was 1 point higher than that in 1978 and within the 3-point range that has prevailed from 1970. Before 1970, there had been an irregular rise in these rates as TDI laws were enacted[4] and as other sickness benefit plans were expanded. Other changes in the income replacement rate have occurred as sickness levels fluctuate and as trends develop in the characteristics of covered plans.

---

[4] The peak period of interest in establishing TDI programs was in the 1940's. During the 1950's a number of States conducted studies, held hearings, and considered bills, but there were no laws enacted until the brief resumption of legislative activity 19 years later. Benefits first became payable under TDI laws as of the following dates: Rhode Island—1943; California—1946; the railroad industry—1947; New Jersey—1949; New York—1950; Puerto Rico—1969; and Hawaii—1970.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961-75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940-79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968-December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960-69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

---

[1] Benefit expenditures from the Federal Hospital Insurance and Supplementary Medical Insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.--Selected social insurance and related programs: Beneficiaries of cash payments, 1940-81

[1] Includes auxiliaries or dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Fewer than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

[1] Represents contributions of employees, employers, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the Hospital Insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950-52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits (see footnote 4).

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[10] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits (see footnote 4).

[4] Includes interfund transfer of interest on reimbursed administrative expenses 1958 to date (see footnote 6).

[5] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[11] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

---

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under sec. 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82

[In thousands]

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-12.—OASDI cash benefits: Monthly benefits in current-payment status for disabled workers and their spouses and children, 1957-82

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[7] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## **Table M-14.**—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and type of benefit, 1940–82

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement,** p. 9]

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

## Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940-82

| Period | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

**Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–82**

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because earnings of the beneficiary or the worker on whose account benefits are paid exceed the earnings test amount; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

| May [4] | 69,957 | 30,997 | 8,834 | 30,126 |

[1] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental Security Income: Number of persons receiving federally administered payments and total amount, by reason for eligibility, May 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,961,932 | $723,641 | $567,889 | $155,752 |
| Aged | 1,632,015 | 224,831 | 164,640 | 60,191 |
| Blind | [2] 78,095 | 17,683 | 12,848 | 4,836 |
| Disabled | [3] 2,251,822 | 481,127 | 390,402 | 90,725 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 429,000 persons aged 65 and over.

**Table M-20.**—Supplemental Security Income: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–82

| , Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|

---

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska, February 1982 data for Minnesota and North Carolina blind; data not available for March 1982.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

## Table M-27.—Supplemental Security Income: Number of persons receiving State-administered State supplementation only, total amount, and average payment, by reason for eligibility and State, March 1982 [1]

| State | Number of persons | | | | Total amount (in thousands) | | | | Average payment | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by Supplemental Security Income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and one or both parents or one caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program, and emergency assistance payments, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to Families with Dependent Children | General assistance | |
| 1945 | $990,704 | $990,704 | $726,550 | $26,557 | ... | $149,667 | $87,930 | ... |
| 1950 | 2,372,204 | 2,372,204 | 1,461,624 | 52,698 | $7,967 | 551,653 | 298,262 | ... |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by Supplemental Security Income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

[1] Benefits payable under the black lung program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the U.S. Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] | | Initial claims (weekly average) [4] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [2] | Percent of covered employment [3] | | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | | | |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |
| 1945 | 589,110 | 2.1 | 116,325 | 2,861,190 | 24,179,769 | 445,866 | 464,996 | 18.77 | 254,271 | 6,914,009 |
| 1950 | 1,503,164 | 4.6 | 235,590 | 5,211,883 | 67,859,529 | 1,373,114 | 1,304,991 | 20.76 | 1,853,336 | 6,972,295 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-37.—Unemployment insurance: Selected data by State, October 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent of covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid | Average weekly number of beneficiaries | | |
| Total | 2,592,282 | 3.0 | 450,174 | 693,623 | 9,424,011 | $997,757,237 | 2,141,821 | $108.92 | 200,252 |

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, Aid to Families with Dependent Children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War II bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## **Table M-40.**—Consumer Price Index for Urban and Clerical Workers, 1940–81 [1]

[1967 = 100; yearly data are annual averages]

Q-1.—Estimated payrolls in employment covered by selected social insurance programs in relation to wages and salaries, 1950–78 . . . 59

Q-2.—OASDI benefits in current-payment status: Number and percent of OASDI beneficiaries in concurrent receipt of federally administered SSI payments, by type of beneficiary, March 1982 . . . 60

Q-3.—OASDI: Number of workers, taxable earnings, and employers reporting taxable wages, 1940–77 . . . 61

Q-4.—OASDI and SSI: Population aged 65 and over receiving OASDI cash benefits, SSI payments, or both, 1940–79, and ranked by State, 1979 . . . 62

Q-5.—OASDI cash benefits: Number and average amount of retired-worker benefits in current-payment status with and without reduction for early retirement, by sex, 1956–82 . . 63

Q-6.—OASDI cash benefits: Number and average monthly amount of retired-worker benefits awarded with and without reduction for early retirement, by status of award, 1956–81 . . . 64

Q-7.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and husbands of retired workers, 1950–82 . . . 65

Q-8.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and husbands of disabled workers, 1958–82 . . . 66

Q-9.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for children, 1940–82. . 67

Q-10.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for mothers, widows, and widowers, 1950–82 . . . 68

Q-11.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and mothers with entitlement based on the entitlement of a disabled person to a child's benefit, 1957–79 . . . 69

Q-12.—OASDI cash benefits: Number of monthly benefits awarded to children, 1940–82 . . . 69

Q-13.—OASDI cash benefits: Number of monthly benefits being withheld, by reason, and by age and type of beneficiary, at end of March 1982 . . . 70

Q-14.—OASDI benefits: Number of monthly benefits in current-payment status, by type of beneficiary and State, December 1980 . . . 71

Q-15.—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and State, December 1980 . . . 72

Q-16.—OASDI benefits: Estimated amount of payments, by type of program and beneficiary, and by State, calendar year 1981 . . . 73

Q-17.—OASDI cash benefits: Estimated number of families and beneficiaries receiving benefits and average monthly benefit in current-payment status, by family group, at end of 1978 and 1979 . . . 74

Q-18.—Hospital Insurance: Number of bills approved for payment and amount reimbursed, by type of benefit, type of beneficiary and period approved, as of September 26, 1981 . . . 75

Q-19.—Hospital Insurance: Number of bills for inpatient short-stay hospital care approved for payment, covered days, total charges and amount reimbursed, by type of beneficiary and period approved, as of September 26, 1981 . . . 76

Q-20.—Medical Insurance: Number of reimbursed bills and amount reimbursed, by type of service, type of beneficiary, and period recorded, as of November 28, 1981 . . . 77

Page

Q-21.—Medical Insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of November 28, 1981 . . . 78

Q-22.—Supplemental Security Income: Number of persons receiving federally administered payments and average monthly amount, by reason for eligibility and type of payment, March 1982 . . . 79

Q-23.—Supplemental Security Income: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility, race, and sex March 1982 . . . 79

Q-24.—Supplemental Security Income: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility and living arrangement, March 1982 . . . 79

Q-25.—Supplemental Security Income: Number of persons in concurrent receipt of federally administered payments and unearned income other than OASDI benefits and average monthly unearned income, by reason for eligibility and type of income, March 1982 . . . 80

Q-26.—Supplemental Security Income: Number and percentage distribution of adults receiving federally administered payments, by reason for eligibility and age, March 1982 . . 80

Q-27.—Supplemental Security Income: Number of persons receiving federally administered payments, by reason for eligibility and State, March 1982 . . . 80

Q-28.—Supplemental Security Income: Number of persons receiving Federal SSI payments, by reason for eligibility and State, March 1982 . . . 81

Q-29.—Supplemental Security Income: Number of persons receiving federally administered State supplementation, by reason for eligibility and State, March 1982 . . . 82

Q-30.—Supplemental Security Income: Average monthly amount of combined Federal and State payments in States with federally administered State supplementation, by reason for eligibility and State, March 1982 . . . 83

Q-31.—Supplemental Security Income: Average monthly amount of Federal SSI payments, by reason for eligibility and State, March 1982 . . . 83

Q-32.—Supplemental Security Income: Average monthly amount of federally administered State supplementation, by reason for eligibility and State, March 1982 . . . 84

Q-33.—Supplemental Security Income: Number of persons receiving federally administered payments and/or State-administered State supplementation, by reason for eligibility and State, March 1982 . . . 84

Q-34.—Supplemental Security Income: Number of persons receiving Federal SSI payments in States with State-administered State supplementation, by reason for eligibility and State, March 1982 . . . 85

Q-35.—Supplemental Security Income: Number of persons receiving State-administered State supplementation, by reason for eligibility and State, March 1982 . . . 86

Q-36.—Supplemental Security Income: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, March 1982 . . . 87

Q-37.—Supplemental Security Income: Average monthly amount of State-administered State supplementation, by reason for eligibility and State, March 1982 . . . 87

Q-38.—Black lung benefits to miners and their spouses and children: Number and monthly amount in current-payment status, December 1970–81 and by State, June 1982. . 88

## Table Q-1.—Estimated payrolls in employment covered by selected social insurance programs in relation to wages and salaries, 1950–78

[Amounts in millions. Except as noted, data are for conterminous United States before 1960 and, beginning 1960, includes Alaska and Hawaii]

| Period | Wage and salary disbursements [1] | | | | Payrolls in employment [4] covered by— | | | |
|---|---|---|---|---|---|---|---|---|
| | Total | Civilian | OASDHI [2] | | Railroad retirement and unemployment insurance [5] | | State unemployment insurance [6] | |
| | | | Amount | Percent of total wages and salaries [3] | Amount | Percent of civilian wages and salaries | Amount | Percent of civilian wages and salaries |
| Calendar year: | | | | | | | | |
| 1950 | $147,026 | $141,773 | $109,400 | 74.4 | $5,327 | 3.8 | $102,765 | 72.5 |
| 1955 | 211,669 | 201,488 | 169,400 | 80.0 | 5,801 | 2.9 | 158,439 | 78.6 |
| 1960 | 271,932 | 261,517 | 234,300 | 83.8 | 5,648 | 2.2 | 209,665 | 80.2 |
| 1961 | 279,462 | 268,886 | 238,800 | 85.4 | 5,345 | 2.0 | 214,137 | 79.6 |
| 1962 | 298,043 | 286,787 | 255,700 | 85.8 | 5,381 | 1.9 | 228,549 | 79.7 |
| 1963 | 313,385 | 301,881 | 268,200 | 85.6 | 5,350 | 1.8 | 240,099 | 79.5 |
| 1964 | 336,133 | 323,726 | 288,400 | 85.8 | 5,446 | 1.7 | 257,339 | 79.5 |
| 1965 | 362,005 | 349,075 | 308,600 | 85.2 | 5,590 | 1.6 | 277,143 | 79.4 |
| 1966 | 398,363 | 382,939 | 344,200 | 86.4 | 5,676 | 1.5 | 305,265 | 79.7 |
| 1967 | 427,490 | 410,422 | 374,700 | 87.7 | 5,734 | 1.4 | 325,073 | 79.2 |
| 1968 | 469,536 | 450,691 | 410,500 | 87.4 | 5,878 | 1.3 | 356,554 | 79.1 |
| 1969 | 514,570 | 494,561 | 452,500 | 87.9 | 6,092 | 1.2 | 392,679 | 79.4 |
| 1970 | 546,453 | 525,771 | 480,000 | 87.8 | 6,281 | 1.2 | 414,285 | 78.8 |

| October–December | 262,942 | 256,275 | 233,900 | 89.0 | 2,561 | 1.0 | 223,997 | 87.4 |
| 1978 | | | | | | | | |
| January–March | 252,186 | 247,621 | (7) | (7) | 2,450 | 1.0 | 242,973 | 98.1 |
| April–June | 272,558 | 266,083 | (7) | (7) | 2,611 | 1.0 | 245,640 | 92.3 |

[1] Gross amounts paid in cash and in kind, before deduction of social insurance contributions. Includes pay of Federal personnel (civilian and military) in all areas. Quarterly data estimated by Social Security Administration, not seasonally adjusted.

[2] Excludes earnings of self-employed persons, who have been covered since January 1, 1951. Beginning 1955, annual data include and quarterly data exclude wages and salaries of agricultural labor, reported only on an annual basis; beginning 1957, includes the Armed Forces in all areas. Annual data, but not quarterly data exclude payrolls in territories and possessions estimated at less than 1 percent of total.

[3] Before 1957, represents percentage of civilian wages and salaries (Armed Forces covered under 1956 legislation).

[4] Taxable plus estimated nontaxable wages and salaries in employment covered by the program. Represents gross earnings, before deduction of social insurance contributions.

[5] Includes a small amount of taxable wages for Alaska and Hawaii.

[6] Beginning 1955, includes payroll of Federal, State, and local government employees except for the Armed Forces (provided with protection under the Ex-Servicemen's Unemployment Compensation Act of 1958).

[7] Data not available.

Source: Data on wage and salary disbursements from Bureau of Economic Analysis, Department of Commerce; payrolls covered by selected programs from reports of administrative agencies.

**Table Q-2.**—OASDI benefits in current-payment status: Number and percent of OASDI beneficiaries in concurrent receipt of federally administered SSI payments, by type of beneficiary, March 1982

| Type of beneficiary | All OASDI beneficiaries [1] | OASDI beneficiaries with SSI | | | | | |
|---|---|---|---|---|---|---|---|
| | | Number | | | Percent of all OASDI beneficiaries | | |
| | | Total | Aged | Blind and disabled | Total | Aged | Blind and disabled |
| Total | 36,088,849 | 1,992,444 | 1,149,063 | 843,381 | 5.5 | 3.2 | 2.3 |

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Excludes 72,400 special age-72 beneficiaries.

[3] Less than .05 percent.

## Table Q-3.—OASDI: Number of workers, taxable earnings, and employers reporting taxable wages, 1940–77

| Period | Workers (in thousands) | | | Earnings | | | | | Employers reporting taxable wages (in thousands) |
|---|---|---|---|---|---|---|---|---|---|
| | Total, in covered employment | Reported with taxable earnings [1] | | Total, in covered employment [2] (in millions) | Reported taxable [1] | | Average per worker | | |
| | | Total | Reported reaching maximum earnings | | Amount (in millions) | Percent of total | Total, in covered employment | Reported taxable | |
| | All reported employment [3] | | | | | | | | |
| 1940 | 35,390 | 35,390 | 1,191 | $35,700 | $32,970 | 92.4 | $1,009 | $932 | 2,500 |
| 1945 | 46,390 | 46,390 | 6,361 | 71,600 | 62,950 | 87.9 | 1,543 | 1,357 | 2,610 |
| 1950 | 48,280 | 48,280 | 13,936 | 109,800 | 87,500 | 79.7 | 2,274 | 1,812 | 3,350 |

---

[1] Taxable earnings includes wages and salaries on which employer taxes or contributions are based. The taxable limit was $3,000 in annual wages from each employer for years through 1950; $4,200 in annual wages or self-employment earnings in 1955; $4,800 during 1960–65; $6,600 during 1966–67; $7,800 during 1968–71; $9,000 in 1972; $10,800 in 1973; $13,200 in 1974; $14,100 in 1975; $15,300 in 1976, and $16,500 in 1977.

[2] Total wages through 1950, and total earnings beginning 1955; including estimated amounts above the taxable maximum.

[3] Beginning 1955, workers and earnings include self-employment.

[4] Preliminary data.

[5] Quarterly data not available for self-employment and agricultural employment. Total workers in covered employment includes estimated number of workers not reported because they had reached the taxable limit in an earlier quarter of the year.

---

[1] Not currently payable awards are conditional and deferred awards suspended immediately following determination, chiefly because of earnings of the retired worker. Since September 1965, most not currently payable awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Conversions are awards of retired-worker benefits to disabled-worker beneficiaries on attainment of age 65; transitionally insured awards are those made to persons aged 72 and over with 3-5 quarters of coverage.

[3] Excludes disability conversions and transitionally insured as well as not currently payable awards.

[4] Currently payable regular awards plus those originally awarded as not currently payable that have moved to payment status; excludes conversions and awards to the transitionally insured.

[5] The average amounts shown are based on monthly averages for September-December 1972 and reflect the benefit increases authorized by 1967 Amendments to the Social Security Act.

[6] Benefit amounts awarded before June are included in the computation of the average after being converted to June rates.

[7] Data not available.

[8] The average amounts shown are based on monthly averages for March-December 1968 and reflect the benefit increases authorized by the 1967 Amendments to the Social Security Act.

[1] Beginning September 1965, includes entitled divorced wives.

[2] Wives aged 62 and over. Also includes wives aged 65 and over with entitled children.

[3] Under age 65 with entitled children in their care.

[4] Dependency requirement for eligibility to benefits was eliminated in March 1977.

---

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Aged 62 and over.

[3] Under age 65.

[4] Includes wife beneficiaries aged 62 and over, nondivorced and divorced, and those under age 65 with entitled children in their care.

[5] Includes disabled persons aged 18 and over whose disability began before age 22 and entitled full-time students aged 18–21.

[6] Includes surviving divorced mothers and fathers with entitled children in their care.

[7] Aged 60 and over for widows, widowers, and surviving divorced wives, and aged 62 and over for parents. Also includes disabled widows, widowers, and surviving divorced wives aged 50–59.

**Table Q-15.**—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and State, December 1980

[In thousands]

| State | Total | Retired workers [1] | Disabled workers | Wives and husbands [2]— Retired workers | Wives and husbands [2]— Disabled workers | Children [3] of— Retired workers | Children [3] of— Deceased workers | Children [3] of— Disabled workers | Widowed mothers and fathers [4] | Widows and widowers [5] | Parents | Special age-72 beneficiaries |
|---|---|---|---|---|---|---|---|---|---|---|---|---|

[1] Aged 62 and over.

[2] Includes wife beneficiaries aged 62 and over, nondivorced and divorced, and those under age 65 with entitled children in their care.

[3] Includes disabled persons aged 18 and over whose disability began before age 22 and entitled full-time students aged 18-21.

[4] Includes surviving divorced mothers and fathers with entitled children in their care.

[5] Aged 60 and over for widows, widowers, and surviving divorced wives, and aged 62 and over for parents. Also includes disabled widows, widowers, and surviving divorced wives aged 50-59.

**Table Q-16.—OASDI benefits: Estimated amount of payments, by type of program and beneficiary, and by State, calendar year 1981**

[In millions]

| State | Total [1] | OASI | | | | DI | | |
|---|---|---|---|---|---|---|---|---|
| | | Total | Retired workers | Spouses and children | Survivors [2] | Total | Disabled workers | Spouses and children |
| Total | $140,995 | $123,685 | $83,615 | $8,865 | $31,205 | $17,200 | $14,380 | $2,820 |

---

[1] Includes only those bills recorded in the Social Security Administration central records before September 26, 1981. A bill does not necessarily represent a total stay in a covered facility or a complete series of visits covered under an established home health plan. Usually, more than one bill is submitted for each stay in a long-term hospital, or in a skilled-nursing facility and for visits under a home health plan. Because of lags in bill processing by intermediaries and the Social Security Administration, data for recent time periods are incomplete; comparison of most recent periods with similar periods in earlier years are, therefore, not valid.

[2] Period in which the intermediary approved bills for payment.

[3] Included in total, but not shown separately, are bills for outpatient diagnostic services approved for payment under the Hospital Insurance program.

[4] Actual benefit payments as represented in trust fund transactions differ from amounts reimbursed as shown above, which represent payments for covered services based on an interim rate (either per diem or a percent of total charges) and adjusted at the end of each provider's operating year on the basis of audited reasonable costs of operation. Payments exclude deductibles and coinsurance amounts and noncovered services as specified by law.

[5] Includes data for services rendered to beneficiaries aged 65 and over, and the new group of beneficiaries, who became entitled to Hospital Insurance benefits on or after July 1, 1973, (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to Hospital Insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to Hospital Insurance benefits solely because of chronic renal disease.

**Table Q-19.**—Medicare Hospital Insurance: Number of bills for inpatient short-stay hospital[1] care approved for payment, covered days, total charges and amount reimbursed, by type of beneficiary and period approved, as of September 26, 1981[2]

| Period approved[3] | Approved bills | | | Hospital charges | | | | |
|---|---|---|---|---|---|---|---|---|
| | Number (in thousands) | Covered days of care | | Total (in thousands) | Per bill | Per day | Amount reimbursed[4] | |
| | | Total (in thousands) | Average per bill | | | | Total (in thousands) | Percent of total |
| | Total[5] | | | | | | | |
| 1974 | 8,073 | 87,925 | 10.9 | $10,524,686 | $1,304 | $120 | $7,936,618 | 75.4 |
| 1975 | 8,542 | 90,292 | 10.6 | 13,104,395 | 1,534 | 145 | 9,835,732 | 75.1 |
| 1976 | 9,084 | 95,060 | 10.5 | 16,215,493 | 1,785 | 171 | 12,074,678 | 74.5 |

| | Disability beneficiaries[7] | | | | | | | |
| 1980 | 1,291 | 12,134 | 9.4 | $3,790,225 | $2,936 | $312 | $2,601,589 | 68.6 |
| Jan.-Sept. 1981 | 855 | 7,985 | 9.3 | 2,855,093 | 3,339 | 358 | 1,939,804 | 67.9 |

[1] General and special hospitals reporting average stays of less than 30 days.

[2] Includes only those bills recorded in the Social Security Administration central records before September 26, 1981. A bill does not necessarily represent a total stay in a covered facility or a complete series of visits covered under an established home health plan. Usually, more than one bill is submitted for each stay in a long-term hospital, or in a skilled-nursing facility and for visits under a home health plan. Because of lags in bill processing by intermediaries and the Social Security Administration, data for recent time periods are incomplete; comparison of most recent periods with similar periods in earlier years are, therefore, not valid.

[3] Period in which the intermediary approved bills for payment.

[4] Actual benefit payments as represented in trust fund transactions differ from amounts reimbursed as shown above, which represent payments for covered services based on an interim rate (either per diem or a percent of total charges) and adjusted at the end of each provider's operating year on the basis of audited reasonable costs of operation. Payments exclude deductibles and coinsurance amounts and noncovered services as specified by law.

[5] Includes data for services rendered to beneficiaries aged 65 and over, and the new group of beneficiaries who became entitled to Hospital Insurance benefits on or after July 1, 1973, (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to Hospital Insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to Hospital Insurance benefits solely because of chronic renal disease.

**Table Q-20.**—Medicare Supplementary Medical Insurance: Number of reimbursed bills and amount reimbursed, by type of service, type of beneficiary, and period recorded, as of November 28, 1981[1]

[In thousands]

---

[1] Includes only those bills for which reimbursements were made by carriers or intermediaries and that were recorded in the Social Security Administration central records before November 28, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Includes in total, but not shown separately, are data for which type of service is unknown.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before January 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the Supplementary Medical Insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes bills for (1) ancillary and other miscellaneous SMI services provided by hospitals, skilled-nursing facilities, and home health agencies; (2) chronic renal dialysis services furnished by limited care facilities; (3) hospital based physicians' services with charges calculated on a per diem rate; and (4) supplier (other than independent laboratory) services.

[6] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to Supplementary Medical Insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[7] Includes a relatively small number of persons aged 65 and over entitled to Supplementary Medical Insurance benefits solely because of chronic renal disease.

[8] Includes a relatively small number of persons under age 65 entitled to Supplementary Medical Insurance benefits solely because of chronic renal disease.

**Table Q-21.**—Medicare Supplementary Medical Insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of November 28, 1981[1]

| | Disability beneficiaries[7] | | | | | | | | | | | |
| 1980 | 12,344 | $1,065,988 | $837,475 | 78.6 | 1,309 | $397,661 | $313,714 | 78.9 | 11,035 | $668,328 | $523,741 | 78.4 |
| Jan. 1-Nov. 28, 1981 | 12,068 | 1,123,095 | 884,156 | 78.7 | 1.268 | 416,054 | 328,819 | 79.0 | 10,800 | 707,041 | 555,337 | 78.5 |

[1] Includes only those bills for which reimbursements were made by carriers and that were recorded in the Social Security Administration central records before November 28, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Represents allowed charges as determined by the carriers on the basis of customary charges for similar services generally made by the physician or supplier of covered services and also on prevailing charges in the locality for similar services.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before January 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the Supplementary Medical Insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to Supplementary Medical Insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to Supplementary Medical Insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to Supplementary Medical Insurance benefits solely because of chronic renal disease.

## SSI Quarterly Data

Tables Q-22-32 present data on the number of persons who received federally administered Supplemental Security Income for the Aged, Blind, and Disabled at the end of the quarter and the average monthly amount of these payments. Those receiving Federal SSI payments and/or federally administered State supplementary payments are included. Emergency advance payments are not included; adjustments have not been made for overpayment refunds, returned checks, and special disbursements for underpayments. The data in the tables are estimated on the basis of the figures for the last month of the quarter.

Tables Q-33-37 present data on the number of persons who received Federal SSI payments and/or State-administered State supplementary payments in States with State-administered State supplementation programs. The data reported represent figures for the last month of the quarter.

**Table Q-22.**—Supplemental Security Income: Number of persons receiving federally administered payments and average monthly amount, by reason for eligibility and type of payment, March 1982

| Type of payment | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| | Number of persons | | | |
| Total | 3,998,043 | 1,655,225 | [1] 78,509 | [2] 2,264,309 |
| Federal SSI payments [3] | 3,572,759 | 1,408,728 | 69,265 | 2,094,766 |
| Federal SSI payments only | 2,380,745 | 1,012,620 | 42,215 | 1,325,910 |
| Federal SSI and State Supplementation | 1,192,014 | 396,108 | 27,050 | 768,856 |
| State supplementation [4] | 1,617,298 | 642,605 | 36,294 | 938,399 |
| State supplementation only | 425,284 | 246,497 | 9,244 | 169,543 |
| | Amount of payments (in thousands) | | | |
| Total | $738,623 | $228,524 | $18,016 | $492,082 |
| Federal SSI payments | 579,487 | 167,005 | 13,090 | 399,392 |
| State supplementation | 159,136 | 61,519 | 4,926 | 92,691 |
| | Average monthly amount | | | |
| Total | $184.74 | $138.06 | $229.47 | $217.32 |
| Federal SSI payments | 162.19 | 118.55 | 188.98 | 190.66 |
| State supplementation | 98.39 | 95.73 | 135.72 | 98.77 |

[1] Includes approximately 24,000 persons aged 65 and over.

[2] Included approximately 419,000 persons aged 65 and over.

[3] Includes persons with Federal SSI payments only, and Federal SSI and federally administered State supplementation, data partly estimated.

[4] Includes persons with federally administered State supplementation only, and Federal SSI and federally administered State supplementation, data partly estimated.

**Table Q-23.**—Supplemental Security Income: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility, race, and sex, March 1982

| Race and sex | Total | Aged | Blind | Disabled |

---

[1] Partly estimated.

[2] Includes all persons with Federal SSI payments whether receiving Federal payments only or both Federal SSI and federally administered State supplementary payments.

[3] Includes persons eligible for both Federal SSI payments and federally administered State supplementation.

[4] Includes all persons eligible for Federal SSI payments in the 50 States and the District of Columbia.

[5] The number of persons receiving Federal SSI payments in States without federally administered State supplementation is shown in table Q-27.

**Table Q-29.**—Supplemental Security Income: Number of persons receiving federally administered State supplementation, by reason for eligibility and State, March 1982 [1]

| State | All persons | | Aged | | Blind | | Disabled | |

| Wyoming [4] | 1,749 | 667 | 35 | 1,047 |

[1] Excludes data for State supplementation only in New Hampshire, South Dakota, and Virginia.

[2] Includes data for State supplementation only not distributed by reason for eligibility.

[3] Includes March 1980 supplementation data for Alaska, February 1982 data for Minnesota and North Carolina blind; data not available for March 1982.

[4] Represents data for federally administered payments; no persons receiving State supplementation only.

## Table Q-34.—Supplemental Security Income: Number of persons receiving Federal SSI payments in States with State-administered State supplementation, by reason for eligibility and State, March 1982

| State | All persons | | Aged | | Blind | | Disabled | |
|---|---|---|---|---|---|---|---|---|

[1] Includes data not distributed by reason for eligibility.

[2] Represents March 1980 data for Alaska, February 1982 data for Minnesota and North Carolina blind; data not available for March 1982.

[3] Data not available.

[4] Includes data for the blind.

## Table Q-36.—Supplemental Security Income: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, March 1982

[In thousands]

| State | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| Total [1] | [2] $220,510 | $72,103 | $4,699 | $143,557 |
| Alabama | 19,930 | 8,581 | 366 | 10,983 |
| Alaska [3] | 678 | 208 | 14 | 456 |
| Arizona | 5,407 | 1,530 | 129 | 3,749 |
| Colorado | 8,236 | 4,381 | 68 | 3,788 |
| Connecticut | 5,901 | 1,616 | 88 | 4,197 |
| Florida [1] | 30,117 | 12,401 | 550 | 17,166 |
| Idaho | 1,445 | 333 | 24 | 1,088 |
| Illinois | 23,237 | 4,350 | 408 | 18,478 |
| Kentucky | 15,935 | 4,892 | 445 | 10,598 |
| Maryland [1] | [2] 8,338 | 1,688 | 139 | 6,440 |
| Minnesota [3] | 5,089 | 1,349 | 117 | 3,623 |
| Missouri | 13,045 | 4,435 | 338 | 8,272 |
| Nebraska | 2,367 | [illegible] | 48 | 1,774 |
| New Hampshire | 1,264 | 236 | 35 | 993 |
| New Mexico | [2] 4,110 | 1,144 | 90 | 2,856 |
| North Carolina | 23,004 | 7,720 | 627 | 14,657 |
| North Dakota | 831 | 276 | 14 | 541 |
| Oklahoma | 12,484 | 5,613 | 226 | 6,645 |
| Oregon | 4,150 | 950 | 131 | 3,069 |
| South Carolina | 12,397 | 3,902 | 370 | 8,125 |
| South Dakota [1] | 1,074 | 350 | 27 | 697 |
| Utah | [2] 1,254 | 260 | 33 | 901 |
| Virginia | 12,845 | 3,811 | 267 | 8,766 |
| West Virginia | 7,100 | 1,465 | 137 | 5,498 |
| Wyoming | 271 | 68 | 7 | 196 |

[1] Includes federally administered mandatory supplementary payments totaling $19,000 for three States: $1,000 for Florida, $15,000 for Maryland, and $3,000 for South Dakota.

[2] Includes State-administered optional supplementary payments for three States totaling $151,000 not distributed by reason for eligibility: $71,000 for Maryland, $20,000 for New Mexico, and $60,000 for Utah.

[3] Includes March 1980 supplementary payment for Alaska, February 1982 data for Minnesota, and North Carolina blind; data not available for March 1982.

## Table Q-37.—Supplemental Security Income: Average monthly amount of State-administered State supplementation, by reason for eligibility and State, March 1982

| State | All persons | | | | Persons with Federal SSI and State supplementation | | | | Persons with State supplementation only | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|

## Further Reforms Announced for Continuing Disability Investigations

On September 8, Richard S. Schweiker, Secretary of Health and Human Services, and John A. Svahn, Commissioner of Social Security, announced further administrative reforms of the Continuing Disability Investigation (CDI) review process. The action follows by 1 week the decision to initiate CDI reviews with face-to-face beneficiary interviews in Social Security Administration (SSA) district or branch offices (noted in this space in the September issue). In the joint announcement, the officials also renewed their endorsement of several legislative proposals intended to ease the impact of the CDI program on persons whose cases are selected for review.

The new administrative reforms include:

—A 20-percent reduction in the number of CDI cases to be selected for review by State Disability Determination Service agencies during the 1983 fiscal year, which begins this month. The number of such cases will fall from about 806,000 to about 640,000, a move designed to ease the workload burden and allow States more time to develop medical evidence for the cases.

—Continuation through September 1982 of a selective moratorium on referral of cases to a number of States with unusually large CDI backlogs. For August and September, approximately 56,000 such case files were held at SSA headquarters in Baltimore pending State action to clear up overdue reviews.

Re-examination at least every 3 years of the cases of all disabled beneficiaries whose conditions are not permanent was mandated by the Social Security Disability Amendments of 1980 (Public Law 96–265). As a result of these reviews, many individuals have been removed from the rolls after having been found to be no longer disabled under the terms of the law.

Chief among the legislative proposals endorsed by Secretary Schweiker and Commissioner Svahn are:

—A mandate, beginning October 1, 1983, for face-to-face evidentiary hearings at the reconsideration level of review of State agency decisions, a review that is now restricted to examination of submitted evidence.

—A provision that Disability Insurance benefits be continued for up to 6 months during the initial appeals (reconsideration) process. Benefits are now generally terminated after the second month following the month of the original State agency decision.

## Program Operations

### OASDI Benefits

About 35,459,700 beneficiaries under the Old-Age, Survivors, and Disability Insurance (OASDI) program received $13.1 billion in monthly cash benefits for June 1982—an increase of $1.0 billion from the amount paid for June 1981. This increase reflects the 7.4-percent cost-of-living increase that became effective with the checks for June 1982.

As a result of the benefit increase, the June average monthly benefit amounts for OASDI beneficiaries were substantially higher than the May averages. Retired and disabled workers had June monthly benefit amounts averaging $415.94 and $442.85, respectively. The corresponding averages for May were $387.23 and $412.28. The benefit amounts referred to here are the amounts before the new rounding of benefits procedure that also went into effect in June.

| OASDI | June 1982 | May 1982 | June 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,460 | 35,475 | 35,793 |
| Aged 65 and over, total | 24,561 | 24,552 | 23,990 |
| Retired workers | 18,187 | 18,183 | 17,693 |
| Survivors and dependents | 6,305 | 6,300 | 6,213 |
| Special age-72 beneficiaries | 69 | 70 | 83 |
| Under age 65, total | 10,899 | 10,923 | 11,803 |
| Retired workers | 2,205 | 2,195 | 2,099 |
| Disabled workers | 2,713 | 2,713 | 2,835 |
| Survivors and dependents | 5,981 | 6,015 | 6,869 |
| **Total monthly benefits** (in millions) [1] | $13,100 | $12,193 | $12,053 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $415.94 | $387.23 | $382.83 |
| Disabled workers | 442.85 | 412.28 | 413.56 |
| Aged widows and widowers | 373.67 | 347.71 | 344.37 |
| Children of deceased workers | 289.63 | 269.39 | 268.58 |
| **Average benefits awarded:** | | | |
| Retired workers | $379.98 | $385.58 | $394.60 |
| Disabled workers | 454.08 | 414.30 | 438.88 |
| Aged widows and widowers | 363.34 | 341.10 | 338.67 |
| Children of deceased workers | 282.21 | 255.23 | 268.67 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

The number of monthly cash benefits awarded in June 1982 totaled 183,839, 44 percent of which were to retired workers. Eighty-eight percent of all awards and 87 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $356.65 for retired workers and $454.87 for disabled workers.

## SSI Payments

**Federally administered payments.** In June 1982, 3,956,900 persons received federally administered Supplemental Security Income (SSI) payments, down 5,100 from the total in May. The number of aged recipients decreased by 5,900, while the disabled rose by 800 and the blind by 30. Thirty-six out of 51 States reported a gain in their overall SSI caseload. The number of disabled cases increased in 35 States, the blind in 25, and the aged in 5.

Federally administered payments in June totaled $729.1 million, up $5.4 million from the previous month. Federal SSI payments increased by $4.5 million to $572.4 million, and federally administered State supplementation rose by $1 million to $156.7 million.

**State-administered supplementary payments.** During April 1982, the number of persons receiving State-administered supplementation continued its downward trend, reaching a total of 248,000. Expenditures for these State payments also dropped from $20.7 million in March to $20.3 million in April. The majority of the caseload and expenditures decrease occurred in the aged category.

# Earnings Replacement Rates and Total Income: Findings From the Retirement History Study

by Alan Fox*

This article describes and reports on the degree to which Social Security and private pensions replaced preretirement earnings for a sample of individuals retiring in the early 1970's. Although simple in concept, replacement rates can be defined in many different ways. Because no one definition is best for all purposes, several are considered, and the contexts in which each might be utilized are discussed. Both Social Security and total replacement rates are presented for individual retired workers and married couples. Also presented are rough estimates of changes in total income at retirement.

Several types of empirical measures are available for assessing the performance of the Social Security system among its various beneficiary populations. Two such measures—the level of retirement benefits and total retirement income—may be examined either by themselves or in comparison with some measure of income adequacy such as the poverty line or the median income of current workers. In addition, expected lifetime retirement benefits might be compared with total payroll taxes paid before retirement; this comparison would measure the rate of return on taxes paid into the system.

This article applies yet another measure of the system's performance—the earnings replacement rate—to a sample of recently retired workers. At first glance, the concept of an earnings replacement rate is simple: it is the ratio of retirement benefits to preretirement earnings.[1] This ratio approximates the change in living standards at retirement, since for most persons earnings are the primary source of preretirement income, while pension benefits are the primary income source after retirement. Developing this concept, however, can be rather complex because replacement rates are used to examine many different aspects of the retirement system. The nature of the question being asked may lead to different specifications for the replacement rate calculation, with widely varying results. Each of the specifications is valid, but its appropriateness depends on the use to which it is put. This article therefore presents different constructs of replacement rates and suggests the context for each.

The first section below describes the issues and options for computing replacement rates and provides an overview of the data base used in this study. The remaining sections describe replacement rates calculated on the basis of various sets of specifications. A Technical Note that expands the definitions and methodology used in the analysis is available on request from the Publications Staff, Room 1120, 1875 Connecticut Ave., NW., Washington, D.C. 20009.

## Issues in Calculating Replacement Rates

Debate can arise over virtually every aspect of the replacement rate calculation. Perhaps the first issue to be addressed is whether these rates should be based on average earnings for all workers paying into Social Security or on actual earnings experiences of specific individuals. The former method, producing "illustrative" replacement rates, is useful for many program-related purposes, such as assessing overall differences in benefit structures and costs of changes in benefit computation methods. To assess the performance of the system among a group of current retirees, their actual earnings experience may be more appropriate, because the preretirement earnings of individual workers tend to be erratic and, for the most part, rise faster in the immediate preretirement period than do average earnings for workers of all ages.[2] Throughout this study, calculations are

Although many persons helped in the preparation of this article, the author especially wishes to acknowledge the assistance of Melinda Upp, Office of Program Analysis.

[1] Throughout this article the word "pension" will be used to include private pensions and public employee pensions earned while the person was simultaneously covered under Social Security. Excluded are public employee pensions that take the place of Social Security, such as Federal Civil Service benefits.

[2] For a discussion of "illustrative" and "actual" replacement rates, see Alan Fox, "Earnings Replacement Rates of Retired Couples: Findings From the Retirement History Study," **Social Security Bulletin**, January 1979, pages 17–39.

based on the actual earnings of one cohort of individual workers (and, in some instances, their wives).

The next issue is what to include in the denominator of the calculation (the measure of the preretirement standard of living) and what to include in the numerator (the measure of the postretirement standard of living), as well as how to calculate each. Among the factors to be considered are:

- Which years' earnings should be used? The ones immediately preceding retirement? Maximum or average recent earnings? Career or lifetime average earnings?
- Should earnings be indexed to a given year's wage or price levels?
- What definitions of income should be included in the numerator and denominator? Social Security benefits alone or Social Security plus pensions and perhaps other retirement income sources? Earnings restricted to the Social Security taxable wage base, or total earnings? Social Security benefits actually received, or benefits that would be received for age-65 retirement? Earnings and benefits before or after payroll and income taxes?

## Which Years' Earnings

Two sets of years are emphasized here: (1) The highest, recent years; specifically, the average of the 3 years of highest earnings out of the 10 years immediately before retirement—the "high-3"—and (2) "typical" recent years; specifically, the average of the 4 years remaining after disregarding the highest and lowest 3 out of the 10 years immediately before retirement. Neither alternative is unequivocally "correct."

Using the *high-3* is common practice in calculating private pensions. The objective there is to base the pension on the highest justifiable measure of preretirement earnings. The highest single year would be most advantageous but may be anomalous or may be manipulated by the worker. The high-3 therefore represents a reasonable compromise between the desire to provide a favorable base for the computation and the desire to avoid using a nonrepresentative year. However, the high-3 measure is not a representative average of preretirement earnings; rather, it is a measure that guarantees that any deviation in earnings from average preretirement levels will favor the retiree by overstating preretirement earnings levels. Although this may be a reasonable way to compute private pensions, the high-3 measure may not be the most appropriate tool to evaluate how well postretirement income replaces preretirement earnings, especially when examining income sources whose amount is not related solely to these particular earnings.

The base may alternately be measured by recent typical or *average* earnings rather than maximum earnings. The example used here is derived by disregarding both the highest and lowest 3 years of the last 10, and using the remaining 4 years to compute a representative average—"middle-4." By definition, this measure produces a higher replacement rate than the high-3.

Two other bases can also be used: Career average earnings and earnings in the last full year before retirement. Since Social Security benefits are designed to replace a portion of a worker's lifetime earnings, it is appropriate to compute replacement rates in terms of *career average* earnings. One drawback, however, is that few workers think of their preretirement standard of living in terms of a career average, because that is a difficult value to conceptualize. Of the measures discussed, the career average produces the highest replacement rates because workers' earnings tend to increase as they grow older and have more work experience. Thus, any measure that includes years of earlier, lower earnings provides a less stringent test of a retirement system.

The last part of this article briefly considers the ratio of total postretirement income—including income from earnings, assets, and other sources—to total preretirement income. For that analysis, only data for the last full year before and after retirement are available so no "average" or "maximum" total income levels are considered.

## Indexing

Whether earnings should be indexed depends largely on which years' earnings are being used. Clearly, it is more necessary to index earnings received several years before retirement than more recent earnings. On average, the midpoint of the middle-4 period was about 6 years before retirement; for workers retiring in 1976, a dollar in 1970 earnings was worth only 68 cents. But the midpoint for the high-3 measure was, on average, 3 years before retirement, and the Consumer Price Index increased 28 percent between 1973 and 1976—so it can be argued that even these more recent earnings should be indexed. On the other hand, it can be argued that workers do not mentally index their earnings when they think about how their postretirement income replaces preretirement income. In this article, when the middle-4 years of earnings are used, they are indexed; and when the highest-3 years are used, replacement rates are based on both indexed and nonindexed earnings.

If wages and prices were not increasing at the same rate, it would also be necessary to decide whether to use a wage or price index. During most of this study, wages and prices were both rising at about the same rate, so the issue is moot. With one exception, all earnings here are price-indexed. The one exception is career average earnings, which were wage-indexed to more closely approximate the indexing done as the basis for determining a person's Social Security benefit.

Replacement rates based on nonindexed earnings will tend to be higher than those based on indexed earnings because indexing increases the dollar amount of the earnings and therefore the amount to be replaced. This is particularly true during times of rapid inflation.

## Types and Amounts of Income

What income sources should be included in the calculation, whether to include earnings above the maximum subject to Social Security taxes, and whether to use earnings before or after taxes depends on the focus of the inquiry. Each of the sections in this article has a slightly different focus and includes different sources of income and amounts of earnings.

One section of this article looks at the role of Social Security benefits alone and presents replacement rates based on Social Security benefits as a percent of Social Security taxable earnings (that is, earnings up to the amount subject to Social Security payroll taxes). Another section looks at the extent to which all retirement benefits—Social Security as well as public and private employer pensions—replace total preretirement earnings; these rates are most useful in assessing the Social Security system in conjunction with the private pension system. Another section briefly discusses replacement rates based on after-tax (disposable) income. The final section focuses on total income ratios—retirement income from all sources, including assets and earnings (if any), as a percent of total preretirement income.

## Structure of Social Security

It is important to remember several key elements in the design of the Social Security system. First, the benefit formula is weighted to replace a higher portion of lower paid workers' earnings than of higher paid workers' (although higher paid workers will always receive higher benefits). In 1982, for example, 90 percent of the first $211 of average indexed monthly earnings is replaced, 32 percent of the next $1,063, and 15 percent of earnings above that amount.

Second, as noted earlier, earnings only up to a set amount are taxed and included in the benefit calculation. In 1982, this taxable maximum is $32,400. (In 1976, the maximum was considerably lower, even in relation to prevailing wages. At 1982 wage levels, the 1976 ceiling was about $25,100. Starting in 1974, the ceiling has been indexed to average wages.) Both the weighting in the formula and the ceiling on taxable earnings are intended to encourage private savings and to permit supplementation of retirement income for higher earners by employer pensions.

Third, Social Security pays the spouse (almost always the wife) of a worker a benefit equal to half the worker's if she has not worked or has not worked long enough to become insured on the basis of her own earnings. If a spouse is also entitled to a benefit as a worker, then she receives that benefit plus the difference, if any, between it and the benefit to which she is entitled as the spouse of a worker. In this article, married women are categorized as spouses if they receive benefits only on the basis of their husbands' earnings. If they receive only a worker's benefit or a worker's benefit plus a partial spouse benefit, they are categorized as workers.

## The Data Base

Replacement rates in this article are based on the Social Security Administration's Retirement History Study (RHS), a 10-year longitudinal survey of a sample of 11,153 persons aged 58–63 when first interviewed in 1969. By December 1976, persons in the sample were aged 65–71, and 9 out of 10 had claimed Social Security benefits of one sort or another. Replacement rates were computed for those who had begun receiving cash benefits as retired workers by December 1976. Persons who had ever received disabled-worker benefits were excluded, as were those whose benefits began before 1968 or whose earnings or benefit records were unusable for any reason.

For all types of replacement rates presented in this article, preretirement earnings were taken from the Summary Earnings Record (SER), which is updated yearly for all persons with Social Security numbers. For each RHS sample person (and wife, if married), both the SER and extracts from the Master Beneficiary Record (MBR) have been linked to the survey data. Because the SER contains only taxable earnings, total earnings in many instances had to be estimated using a rather crude, but relatively unbiased, method. (The estimation procedure is explained in the Technical Note, available separately as indicated.)

This study tabulates replacement rates for all men, married men, and nonmarried men and women (never married, widowed, or divorced). Married women were not sampled separately for the RHS, but are included where possible as wives of married men in the sample. Surviving spouses—widows of married men in the RHS sample—are excluded from all tabulations.

## Standardizing Replacement Rates to 1976

Because of the longitudinal nature of this survey, sample persons and their wives retired in different years and under different circumstances during the period 1968–76. Persons retiring during early years of the survey tended to have done so at younger ages and with greater benefit reductions than those retiring later.

Those retiring later tended to have had higher preretirement earnings. Furthermore, the benefit formula was changed to increase benefits substantially during the early 1970's, and, since 1974, benefits have been automatically indexed to changes in average wages; benefits after entitlement are indexed to changes in the Consumer Price Index. Benefit increases totaled 94 percent over the 1968–76 period, compared with a 64-percent rise in the CPI.

Thus, several counteractive factors confound the levels of replacement rates among RHS persons. To put everyone on the same footing, all replacement rates have been standardized to 1976 levels. Preretirement earnings have been wage-indexed from the year of actual retirement to 1976 levels, as have pension benefits. Social Security benefits have been adjusted upward by the rate of increase in the benefit formula.

## Replacement of Earnings Subject to Social Security Taxes

Social Security offers workers the option of retiring at age 65 with full benefits or at ages 62–64 with actuarially reduced benefits.[3] The reduction is designed to ensure that, roughly speaking, workers on average will receive the same total amount of benefits over their remaining years regardless of the age at which they first claim benefits. In effect, the early retiree trades a lower monthly benefit for receipt of benefits over a longer period of time. Thus, it is debatable whether the numerator in the replacement rate calculation should be based on the amount a retiree actually receives (the monthly benefit amount—MBA) or the amount to which he or she would be entitled by waiting until 65 to retire (the primary insurance amount—PIA). Using the MBA shows the system's actual performance; using the PIA shows its potential. Because both are reasonable measures, this section includes illustrations of both to examine the extent to which Social Security benefits alone replace earnings subject to payroll taxes.

Only taxable earnings are included in these replacement rate calculations because Social Security was designed to permit higher earners to save for their own retirement and because higher earners also are more likely to be covered by private pension systems. Thus, if one wishes to focus on the degree to which Social Security alone replaces preretirement income, it seems reasonable to limit the denominator to earnings subject to the Social Security payroll tax. For this article, these earnings have been calculated using the high-3 indexed, middle-4 indexed, and career average indexed measures, as highlighted in the tabulation in the next column.

| Sex and marital status | Median Social Security replacement rates, based on taxable earnings | | |
|---|---|---|---|
| | High-3, price-indexed | Middle-4, price-indexed | Career average, wage-indexed |
| | Benefits actually paid (MBA) | | |
| All men | 34 | 39 | 45 |
| Married men | 34 | 38 | 45 |
| Nonmarried men | 35 | 40 | 45 |
| Nonmarried women | 39 | 46 | 53 |
| | Benefits unreduced by actuarial reduction (PIA) | | |
| All men | 36 | 40 | 46 |
| Married men | 36 | 40 | 46 |
| Nonmarried men | 37 | 43 | 48 |
| Nonmarried women | 41 | 48 | 55 |

Source: Tables 1–3.

### High-3 Indexed Earnings

As would be expected, the actual benefit amount (MBA) as a percent of the high-3 years of earnings produces the lowest replacement rate. For men, both married and nonmarried, the median Social Security benefit replaced approximately one-third of indexed preretirement earnings (table 1). Nonmarried women, whose preretirement earnings tend to be lower and who therefore tend to receive proportionately higher benefits from the weighted Social Security formula, had a median replacement rate of 39 percent. In all cases, the range of rates was very narrow: for men, half fell in the 30–38 percent range, while for women this range was slightly wider—33–47 percent. Had all persons in the sample claimed benefits at age 65, instead of choosing to retire earlier or later, median replacement rates would have been about 5 percent (or 2 percentage points) higher than those based on the MBA.

### Middle-4 Indexed Earnings

Replacement rates based on average recent earnings are, by definition, higher than those based on maximum earnings, as discussed above. As shown in table 2, the median was about 40 percent for men and 46 percent for nonmarried women, or about 15 percent higher than the rates based on maximum earnings. As before, the distribution of these replacement rates was highly concentrated, and PIA replacement rates were slightly higher than those based on actual benefits.

### Career Average Taxable Earnings

As expected, the much longer averaging period for this measure, which most closely approximates the intent of the Social Security benefit calculation, results in median replacement rates that are considerably higher

---

[3] The reduction is 5/9 of 1 percent of the worker's primary insurance amount for every month before age 65 that benefits are claimed, for a maximum reduction of 20 percent at age 62. Workers claiming benefits after age 65 receive an increase of 3 percent of PIA per year.

than those based only on earnings shortly before retirement: about 45 percent for men and 55 percent for nonmarried women, as shown in table 3. PIA replacement rates again are slightly higher than rates based on MBA's.

## Replacement of Total Earnings

This section examines the extent to which Social Security and private and public employer pensions together replace total earnings, including earnings above the taxable maximum. As noted, Social Security is not intended to replace total earnings. In addition to excluding earnings above the taxable maximum from the benefit calculation, the system encourages private savings and the provision of private pensions by using a benefit formula that replaces a smaller fraction of a higher-paid worker's earnings than of a lower-paid worker's. That is, a greater portion of a lower-paid worker's earnings are replaced by Social Security benefits than of a higher-paid worker's. Pensions are usually designed as supplements to Social Security for workers at or near the taxable maximum and provide the primary source of wage replacement for earnings above that level. Therefore, it is appropriate to evaluate the way in which Social Security and pensions together replace total earnings.

This section also examines replacement of a couple's total earnings, in addition to individual earnings. The spouse's earnings, if any, are included in the couple's preretirement earnings, and the spouse's Social Security benefit and pension income, if any, is included in the couple's postretirement income.

Three measures of preretirement earnings are used here: price-indexed earnings for the high-3 years, nonindexed earnings for the high-3 years, and price-indexed earnings for the middle-4 years of the 10 years preceding retirement. As already discussed, using the high-3 years will most closely approximate the base for most pension calculations. The middle-4 measure is a more typical representation of "average" preretirement earnings. By

definition, if both are indexed in the same way, the high-3 measure will produce lower replacement rates than the middle-4 measure.

## High-3 Indexed Earnings

The median replacement rate including both Social Security and pensions was almost 40 percent for men: 37 percent for married men and 39 percent for nonmarried men (table 4). The distribution of rates was quite concentrated, with three-fourths of the men having replacement rates below 48 percent. Reflecting their generally lower preretirement earnings, nonmarried women had somewhat higher median replacement rates, 46 percent.

Almost one-half the men reported having pensions. Their median replacement rate was 44 percent, compared with 33 percent for those with only Social Security benefits. Furthermore, their high-3 indexed earnings were about 60 percent higher: $14,410 versus $9,140 for

[1] Restricted to those who received their first retired-worker benefit in 1968–76. Pensions include private or public employee pensions assumed to be combined with Social Security; see Technical Note for further explanation.

[2] Both husband and wife first receiving benefits in 1968–76; husband as retired worker, wife as retired worker or spouse. High–3 earnings based on last 10 years before husband's first benefit.

men, and $10,200 versus $6,140 for nonmarried women. Thus, pensioners were better off before retirement, and the combination of Social Security and pensions replaced a greater proportion of their earnings, allowing them to come closer than others to maintaining their preretirement standard of living.

The distributions themselves, and the interquartile ranges, indicate a much greater degree of concentration among persons with Social Security benefits alone (mostly in the 20–40 percent range) than among persons with pensions (for whom replacement rates were most commonly in the 20–60 percent range). The different degrees of concentration indicate the wider range of replacement rates resulting from pensions than from Social Security benefits.

Among those who had it, the pension income came close to doubling the Social Security-only replacement rate. For example, among men with pensions, on average, Social Security benefits replaced 25 percent of preretirement earnings,while pensions and Social Security benefits together replaced 44 percent.

Nonmarried women were somewhat less likely than men (married or nonmarried) to receive pensions (33 percent, compared with 43 percent), and their total replacement rates, whether with or without pensions, were higher than those of men: 56 percent among women with pensions, and 41 percent among women without pensions, compared with 44 percent and 33 percent, respectively, for men.

The second part of table 4 shows couples' replacement rates by pension receipt (mostly attributable to the husband) and by benefit type of the wife. As highlighted in the tabulation below, on average, the presence of a beneficiary wife raised the couple's replacement rate about 10 percentage points, from 37 percent for the husband alone to 48 percent for both the husband and wife.

| Median total replacement rate [1] | Husband alone | Couples: Total | Couples: Wife receiving retired-worker benefit | Couples: Wife receiving only spouse benefit |
|---|---|---|---|---|
| All couples | 37 | 48 | 45 | 51 |
| With pension | 44 | 51 | 49 | 54 |
| Without pension | 32 | 43 | 39 | 46 |

[1] Total retirement benefits as percent of high-3 price-indexed earnings.
Source: Table 4.

Among all retired couples, three-fourths had total replacement rates below 58 percent and one-fourth were below 37 percent.

Couples in which the wife was a retired worker had a median replacement rate of 45 percent, compared with 51 percent for couples with the wife receiving a spouse's benefit. Because the replacement rate calculation includes the earnings of both spouses in the denominator, the rate tends to be higher if only one spouse had earnings. Absolute benefit levels, however, are somewhat higher for couples in which both spouses are entitled as workers.[4]

---

[4] Alan Fox, **op. cit.**

## High-3 Nonindexed Earnings

As shown in table 5, the median nonindexed replacement rate for men was 45 percent, with three-fourths having replacement rates below 60 percent. The median replacement rate for nonmarried women was 55 percent. These medians are somewhat higher than the indexed rates shown in table 4 because, as noted, indexing increases the amount of preretirement earnings and therefore the denominator of the replacement rate calculation.

Of course the difference between indexed and nonindexed replacement rates would be far greater during a time of high inflation than when inflation is not rapid. For workers retiring in the 1960's inflation was not much of a factor, but in more recent times it has been much harder to ignore. For instance, for a 1970 beneficiary, prices in that year were 16 percent higher than 3 years previously, while for a 1976 beneficiary, the 3-year difference was 28 percent.

Among couples, the median total replacement rate was almost 60 percent, about 15 percentage points higher than that of the husband alone. Three-fourths had replacement rates below 71 percent. Pension receipt and wife's benefit type had the same general effects on nonindexed replacement rates as with indexed ones: Couples with pensions had higher total replacement rates than those without, and couples with retired-worker wives had lower replacement rates than those with wives receiving spouse benefits only. These relationships are summarized in the following tabulation.

| Median total replacement rate [1] | Husband alone | Couples | | |
|---|---|---|---|---|
| | | Total | Wife receiving retired-worker benefit | Wife receiving only spouse benefit |
| All couples | 45 | 58 | 55 | 62 |
| With pension | 54 | 63 | 60 | 66 |
| Without pension | 39 | 52 | 48 | 56 |

[1] Total retirement benefits as percent of high-3 nonindexed earnings.
Source: Table 5.

## Middle-4 Indexed Earnings

This measure produces replacement rates that are quite similar to those based on high-3 nonindexed earnings. As shown in table 6, the median replacement rate for all men was 46 percent—52 percent for those with second pensions and 40 percent for those without pensions. For nonmarried women, the overall median was 55 percent—64 percent for those with pensions and 48 percent for those without. For married men and their wives, the previously noted relationships obtain, as shown in the tabulation in the next column.

| Median total replacement rate [1] | Husband alone | Couples | | |
|---|---|---|---|---|
| | | Total | Wife receiving retired-worker benefit | Wife receiving only spouse benefit |
| All couples | 46 | 58 | 54 | 63 |
| With pension | 52 | 61 | 58 | 65 |
| Without pension | 40 | 53 | 47 | 59 |

[1] Total retirement benefits as percent of middle-4 price-indexed earnings.
Source: Table 6.

Thus, as expected, the data indicate that replacement rates based on high-3 price-indexed earnings are the lowest of the group, and the high-3 nonindexed rates are, purely coincidentally, very close to the middle-4 indexed rates, as illustrated in the following tabulation. For couples, replacement rates that include the earnings and benefits of the wife are higher than those where only the husband's earnings and benefits are considered.

| Median total replacement rate | High-3, price-indexed | High-3, non-indexed | Middle-4, price-indexed |
|---|---|---|---|
| All men | 38 | 45 | 46 |
| Married men: | | | |
| Alone | 37 | 45 | 46 |
| With wives | 48 | 58 | 58 |
| Nonmarried women | 46 | 55 | 55 |

Although median replacement rates are a useful measure, the role of pensions can more clearly be seen if the data are disaggregated by preretirement earnings levels, as shown in tables 7 and 8. The earnings distribution is divided into five equal intervals, based on the combined distribution of the RHS sample.[5] Table 7 shows that the Social Security replacement rate falls rapidly with each succeeding increase in the level of preretirement earnings. Because pension receipt is increasingly likely for higher earners, however, the *total* replacement rate falls at a lower rate than the Social Security replacement rate over the income spectrum.

Men and women are concentrated in different earnings quintiles. In addition, the RHS sample does not represent the entire population of retired workers, since married women were included only as spouses of men in the sample; they were not sampled separately. To highlight nonmarried women and married couples, all men, married couples, and nonmarried women are classified in table 8 by their own preretirement earnings quintiles. That is, the quintile limits were computed separately for each of the three groups. This assures an even distribu-

---

[5] That is, the earnings of men and women were combined and one set of earnings quintiles developed for use with both subgroups of the sample.

[1] Earnings measures correspond to base of replacement rate. Quintiles computed separately for each group.

[2] Quintile boundaries are: All men—$7,127, $10,304, $13,600, and $17,567; nonmarried women—$4,435, $6,563, $8,583, and $11,167; married couples—$8,568, $13,000, $16,342, and $21,957.

[3] Based on 50 cases or fewer; subject to high sampling variability.

[4] Not computed; base fewer than 25.

[5] Quintile boundaries are: All men—$5,934, $8,000, $11,230, and $14,528; nonmarried women—$3,646, $5,525, $7,236, and $9,516; married couples—$7,018, $10,484, $13,345, and $17,400.

[6] Quintile boundaries are: All men—$5,731, $9,133, $11,801, and $14,317; nonmarried women—$3,803, $5,792, $7,713, and $9,988; married couples—$6,891, $10,800, $13,766, and $18,027.

[7] More than 100 percent.

rates vary less across the income distribution. For nonmarried women the relationship is U-shaped: Total replacement rates fall and then rise as income increases. This pattern reflects the very strong relationship between earnings level and the probability of receiving a pension. Far fewer nonmarried women than married couples in the lowest two quintiles have pensions (1 percent and 16 percent for the nonmarried women, compared with 9 percent and 34 percent for the married couples), so their total replacement rate drops virtually as fast as the Social Security replacement rate up to the third quintile.

Table 8 also shows pensioners and nonpensioners separately. At all income levels, the total replacement rates of pensioners are considerably higher than the replacement rates from Social Security of those without pensions. One group stands out: Persons or couples with high earnings but no pensions have particularly low replacement rates. This group comprises slightly under one-third of the married couples in the top two quintiles.

These figures represent the retirees' situation only in the year they first collect benefits. Most private pensions are not regularly adjusted for cost-of-living increases after retirement, although Social Security benefits are adjusted every year.[6] Therefore, the relative advantage enjoyed by retired persons with pensions might well be rapidly eroded in times of high inflation. Nevertheless, their level of preretirement earnings is on average 55–70 percent higher, as shown in the tabulation on the following page, and their total retirement benefits are commensurately higher.

## After-Tax Replacement Rates

Probably the best measure of a person's or couple's standard of living is disposable income—income net of taxes, fringe benefits, and work-related expenses. It is

| Sex and marital status and pension receipt | Median preretirement earnings, price-indexed [1] | |
|---|---|---|
| | High-3 | Middle-4 |
| Married men, total | $12,570 | $10,660 |
| With pension | 14,520 | 13,050 |
| Without pension | 9,390 | 7,940 |
| Nonmarried women, total | 7,680 | 6,780 |
| With pension | 10,200 | 9,180 |
| Without pension | 6,140 | 5,390 |

[1] In 1976 dollars.

difficult to estimate the value of fringe benefits and the cost of work expenses for individual workers, and no attempt to do so was made here. It was possible, however, to estimate Federal and State income taxes as well as the employee portion of the Social Security tax; the replacement rates in this section are based on those estimates. These rates are particularly relevant because the major source of retirement income—Social Security—is tax exempt and the other source—pensions—is fully taxable, and because each person over age 65 is eligible for two personal exemptions from the Federal income tax.

As shown in table 9, median total replacement rates after taxes were approximately 15 percent higher than before taxes. For example, for all married couples the median rates based on high-3 price-indexed earnings were 48 percent before taxes and 55 percent after taxes. For nonmarried women these medians were 46 percent and 52 percent, respectively. Couples in higher income brackets—notably those with pensions—benefited only slightly more by the tax computation than those without pensions. For instance, after-tax replacement rates (based on price-indexed, high-3 earnings) were 17 percent higher for married couples with pensions, compared with a 14-percent increase for those without. Similar relationships between before- and after-tax replacement rates are shown in table 9 for all three replacement rate definitions.

Table 10 shows after-tax replacement rates by relative level of preretirement earnings. As was seen in table 8, the increased incidence of pensions partially counteracts the sharp decline in Social Security replacement rates as earnings rise. The combination of income and payroll taxes further evens out the structure of total replacement rates, especially for nonmarried women, as shown in table 10 for rates based on high-3 price-indexed earnings. A regression analysis of the relationship between earnings and replacement rates, before and after taxes, is discussed in the Appendix, page 22.

## Total Income Ratios

The most comprehensive measure of the change in living standards that accompanies retirement is the comparison of total income before and after retirement. A low replacement rate based on Social Security benefits and pensions may well be counterbalanced by other income sources. In particular, workers expecting low retirement benefits relative to their preretirement standards of living might be expected to save more; indeed, the maximum on earnings subject to Social Security taxes leaves room for just such savings. High asset income might therefore make up for low retirement benefits. Or persons might supplement low replacement rates or low benefits by working, at least part time, after claiming retirement benefits.

Total income ratios have been computed for persons receiving retired-worker benefits and for couples in which the wife receives any sort of cash benefit. The ratios are price-indexed to the year of first benefit payment. For nonmarried individuals, the ratios are derived from total income reported in the RHS survey in the full years nearest to when Social Security benefits were first claimed. For couples, total income in the last full year before the first spouse received benefits is compared with total income in the first full year after the second spouse received benefits; these amounts are price-indexed to the year in which the first spouse received benefits. (Additional details are included in the Technical Note.) Because of high nonresponse on income, figures presented here must be regarded as preliminary.

Table 11 presents total income ratios by pension receipt. For married men and their wives, the median was 62 percent. Of particular interest is that while by any measure pension recipients have higher median replacement rates than nonrecipients, median total income ratios are the same for the two groups—62 percent. Detailed examination of the distributions shows that somewhat more nonpensioners had relatively high ratios: the top one-fourth of the married couples without pensions had income ratios above 90 percent while among those with pensions, one-fourth had a 78-percent or higher income ratio.

As expected, however, the ratio among pension recipients starts at an initial level of absolute income 60–100 percent higher for recipients than nonrecipients, as shown in the first part of table 11. Therefore, it is obvious that absolute income after retirement is higher among pension recipients than nonrecipients.

Postretirement work among pension nonrecipients is the major reason for the equality of total income ratios. Although 57 percent of married men without pensions reported earnings 1 or 2 years after retirement, only 26 percent of pension recipients did so (table 12). Furthermore, nonrecipients who worked after retirement earned slightly more (the median was $2,390 in 1976 dollars for married men) than did working recipients ($2,150)—presumably because the nonpensioners, who had significantly lower preretirement earnings, continued to earn less but worked more hours than did pensioners.

See footnotes at end of table.

The other major source of postretirement income—asset income—is lower in both incidence and amount among pension nonrecipients than recipients. This finding reflects the pattern of asset ownership found in previous studies of the elderly: Persons who are better-off during their working lifetimes tend to accumulate more assets than those less well-off.[7] The amounts of asset income are much lower than earnings, however, so it is the greater propensity to work after retirement that equalizes income ratios between pensioners and nonpensioners. Note again that nonpensioners' earnings cannot be expected to continue indefinitely, although they will eventually increase their Social Security benefits, while asset income can be expected to continue for some time, if not indefinitely.

Nonmarried men and women have somewhat higher total income ratios, 69 percent and 77 percent, respectively, compared with 62 percent for married couples (table 11). This difference, of course, reflects the progressive benefit formula, which results in higher replacement rates for lower earners. Although married couples with pensions have the same income ratio as those with-

out pensions, nonmarried persons without pensions had somewhat higher income ratios than those with pensions: 79 percent and 58 percent, respectively, for nonmarried men, and 83 percent and 71 percent for nonmarried women. The relatively few nonmarried persons who have pensions received somewhat lower pension amounts compared with their total income. Thus, although nonmarried persons without pensions have lower replacement rates than do pension recipients, their other sources of income in retirement more than compensate. The same pattern of postretirement work and receipt of asset income is evident among nonmarried persons as married couples: Those without pensions are much more likely to work but less likely to have income-producing assets.

## Summary

The level of earnings replacement is one measure of the performance of the income maintenance system that supports our Nation's retirees. The concept of a replacement rate would seem straightforward: It is the ratio between retirement benefits and preretirement earnings. Implementing this concept, however, involves a complex set of options. No one replacement rate can be considered best for all purposes. For this reason, the study reviews many options involved in replacement rate computations and presents a selection of rates applicable to different circumstances.

A general option is how to define the preretirement standard of living, usually defined here as total earnings

[1] Includes those who received their first retired-worker benefit in 1968–76. Taxes simulated. Includes Federal, State, and local income taxes, and Social Security (FICA) taxes, on both preretirement earnings and pension benefits. See the Technical Note for further explanation.

[2] Private or public employee pensions assumed to be combined with Social Security benefits; see the Technical Note for further explanation.

in selected years since, for most persons, earnings constitute the bulk of preretirement income. But which years' earnings should be used? One might use the maximum level of recent earnings (such as the highest 3 years of the last 10 before retirement) or average earnings in recent years (such as the 4 years left after disregarding the highest and lowest 3 years of the last 10). Alternately, some lifetime average might be used.

Since the value of income amounts changes over time, earnings can be indexed to remove the effects of inflation. On the other hand, it may be argued that many retirees do not mentally index their earnings when assessing the adequacy of their own retirement benefits. Because neither method is unequivocally "correct," both indexed and nonindexed earnings are used in this article to compute replacement rates based on the highest 3 years' earnings; for replacement rates based on earnings in the more distant past, only indexed earnings are used.

Because persons in this sample retired during the period 1968–76, and did so at different ages and subject to different Social Security benefit formulas, all replacement rates in this article have been standardized to 1976 levels. The replacement rates thus approximate those of a cross-sectional sample retiring in that year.

Social Security benefits are computed on the basis of

**Table 10.**—Median after-tax Social Security and total earnings replacement rates, by preretirement earnings quintiles and pension receipt for married couples and nonmarried women [1]

[Standardized to 1976 levels]

[1] Includes those who received their first retired-worker benefits in 1968-76. Taxes simulated. Includes Federal, State, and local income taxes, and Social Security (FICA) taxes, on both preretirement earnings and taxable retirement benefits. See the Technical Note for description of simulation procedure. Social Security and total retirement benefits as percent of price-indexed high-3 estimated total earnings, after taxes.

[2] Earnings quintiles based on pre-tax estimated total price-indexed earnings in highest 3 years, adjusted to 1976 level (see table 7).

[3] Based on 50 or fewer cases; subject to high sampling variability.

[4] Not computed; base fewer than 25.

payroll taxes paid on earnings limited to a maximum in each year. Replacement rates based on these truncated earnings are most useful for assessing the performance of the Social Security system by itself. Both Social Security benefits actually received and benefits that would be received in the absence of the actuarial reduction for early retirement have been used in the numerator as measures of Social Security's actual and potential performance. Selected median replacement rates of taxable earnings are shown in the tabulation on page 6.

Social Security benefits were never intended to be the sole support of workers in retirement. Therefore, for assessing the performance of the Social Security system in conjunction with the private-pension sector, another set of replacement rates is necessary. Most pensions are based on a combination of job tenure and the level of recent earnings, not truncated at the Social Security system's taxable maximum. Indeed, pensions are the primary source of replacement for earnings above the taxable maximum. Therefore, for assessing this broader concept of replacement rate, total retirement benefits (Social Security plus, where applicable, private pensions and certain public employee pensions) are compared with total earnings estimated from the earnings records. Where possible, replacement rates of married couples have been computed and categorized by whether the wife received a retired-worker or spouse's benefit. Selected median replacement rates of total earnings are shown in the tabulation in the next column.

| Sex, marital status, and pension receipt | Median total replacement rates, based on total earnings | | |
|---|---|---|---|
| | High-3, price-indexed | High-3, non-indexed | Career Middle-4, price-indexed |
| All men | 38 | 45 | 46 |
| With pension | 44 | 54 | 52 |

| Without pension | 41 | 48 | 48 |
| Married couples | 48 | 58 | 58 |
| With pension | 51 | 63 | 61 |
| Without pension | 43 | 52 | 53 |

Source: Tables 4–6.

Persons with pension benefits have much higher preretirement earnings than those without pensions, and they have higher total replacement rates at retirement. For instance, the replacement rate of indexed earnings in the highest 3 years was 44 percent for married men with pensions, compared with 32 percent for those with only Social Security benefits.

Although the Social Security benefit formula favors low earners, the probability of receiving a pension rises considerably with earnings level. Total replacement

[1] Limited to those first receiving benefits in 1969-75; sample person with retired-worker benefit, spouse with any payable benefit. Not computed if total income not available for both years.

[2] Ratio of postretirement to preretirement total income in nearest survey year, price-indexed to year of first benefit payment. For married men, couple's total income in nearest year before first spouse received benefit (retired-worker for husband, any payable benefit for wife) is compared with couple's total income in nearest year after second spouse claimed benefits; both amounts are price-indexed to year in which the first spouse received benefits.

rates are thus more constant than are Social Security replacement rates over the income spectrum, although the relationship between earnings and total replacement rates is somewhat downward-sloping for married couples and U-shaped for nonmarried women.

Pensions are rarely adjusted after retirement for increases in the cost of living, so it is expected that the relative advantage enjoyed by persons with pensions at the time of retirement will erode over time.

Fully as many RHS wives receive retired-worker benefits in their own right as receive only spouses' benefits. The earnings of a retired-worker wife improve the couple's preretirement standard of living, and result in higher benefits in dollar amounts, but do not add a commensurate amount to their replacement rates. This seeming contradiction occurs primarily because zero earnings are being replaced by the 50-percent spouse benefit for couples in which the wife is not insured in her own right. Therefore, couples with retired-worker wives have lower combined replacement rates—45 percent—than do couples with wives receiving spouses' benefits—51 percent (based on high-3 price-indexed earnings), as shown in the following tabulation.

| Benefit status of wife | Median total replacement rates, based on total earnings | | |
|---|---|---|---|
| | High-3, price-indexed | High-3, non-indexed | Middle-4, price-indexed |
| All married couples | 48 | 58 | 58 |
| Wife retired worker | 45 | 55 | 54 |
| Wife with spouse benefit | 51 | 62 | 63 |

Replacement rates after income and Social Security payroll taxes were also computed to approximate more closely changes in actual standards of living. They tend to be about 15 percent higher than corresponding before-tax rates for nonmarried persons or couples. Persons with higher incomes and pensions were advantaged slightly more from the effects of excluding taxes than were those without pensions.

[1] Limited to those claiming benefits in 1969-75; sample person with retired-worker benefit, spouse with any payable benefit. Not computed if total income not available both before and after retirement. Income sources and amounts reported on RHS questionnaire in first full year following retirement of sample person.

[2] Earned income of sample person only.

[3] Not computed; base fewer than 25.

[4] Based on 50 cases or less; subject to high sampling variability.

[5] Asset income of sample person and spouse (if any).

Retirement benefits are not, of course, the only source of income in retirement. Notably absent from replacement rates discussed so far are sources such as asset income and postretirement earnings. Total income ratios were therefore also computed, based on income reported in the RHS survey waves closest to the year of retirement. These ratios tend to be higher than the corresponding replacement rates, especially for persons without pensions. Preliminary data show that for married couples the income ratios were the same for pensioners and nonpensioners—62 percent. For nonmarried men, the median income ratio was 69 percent, and for nonmarried women it was 77 percent. Nonmarried persons without pensions had substantially higher ratios than those with pensions: 79 percent compared with 58 percent for nonmarried men, and 83 percent compared with 71 percent for nonmarried women. The principal reason for total income ratios to be equalized between pensioners and nonpensioners is the greater propensity for nonpensioners to continue working, at least part time, after beginning to receive Social Security benefits. These earnings are not likely to continue indefinitely, however. On the other hand, pensioners much more frequently reported asset income, a source that is likely to be relatively constant (albeit minor) in retirement.

# Notes and Brief Reports

## Mortality of Older Widows and Wives*

Estimates of future costs of the Social Security program depend in part on population projections. The mortality rates now used by the Social Security Administration (SSA) to "age" the current population are specific to three factors—age, sex, and marital status—and are derived from the national vital statistics system. This system cannot reach other possible correlates of mortality, most notably beneficiary status itself. That is, different types of program beneficiaries may have patterns of mortality that differ from each other and from the pattern for nonbeneficiaries.

SSA receives reports of deaths that result in either the termination of or entitlement to program benefits and records these reports in its administrative files. Age and sex of the deceased is always known for these reported deaths. Marital status is known when the deceased had been entitled to certain auxiliary payments such as widow's or wife's benefits. Furthermore, for deceased widows, the date of the husband's death is known in SSA's system but not in the vital statistics system.

This note reports the results of an exploratory study of a sample of SSA administrative records for widows and wives over the period 1973-80. The study was undertaken to determine whether mortality is different for widow and wife beneficiaries than for other widows and wives, and whether mortality for widows differs by the duration of widowhood. If differences do exist, better cost estimates would be forthcoming if these differences are reflected in population forecasts. The study was limited to the experience of widows aged 60 or older and to wives aged 62 or older, the respective minimum ages for entitlement to widow's and wife's benefits (when there are no minor children in the family).

The hypotheses were that (1) mortality rates would be higher for older widow and wife beneficiaries than for other older widows and wives, and that (2) mortality rates among widows would be relatively high shortly after the death of the husband but would decrease with the duration of widowhood. The justification for the second of these hypotheses is simply the expectation that the excess mortality experienced by widows relative to that of wives is associated with the stress of bereavement, the effects of which diminish with the passage of time.

The rationale for the first hypothesis requires the following explanation. Although the Social Security program provides for the payment of auxiliary benefits to the dependent survivors and dependents of insured workers, such benefits are not paid to family members when they are smaller than those to which these persons are entitled as primary beneficiaries—that is, benefits based on their own lifetime earnings. The expectation was that women who do not qualify for an auxiliary benefit because their primary retirement benefit is too high have worked extensively during their lives and are healthier as a group than women who qualify for an auxiliary benefit. This expectation, together with the likelihood that large numbers of older widows and wives who are not auxiliary beneficiaries are instead primary-only retirement beneficiaries, formed the basis for the first hypothesis.

The findings of the study disprove both hypotheses, however. The mortality rates for widow and wife beneficiaries reflected in SSA administrative records are no higher (and, in fact, are generally lower) than the rates for all widows and wives from the vital statistics system. Also, the higher mortality rate for widows than for wives does not decrease with the passage of time since the death of the husband.

A similar study conducted a number of years ago, which covered the mortality experience of widow beneficiaries during 1960-62, arrived at similar conclusions.[1] It found that, "A comparison of the OASDI death rates for widow beneficiaries with those for United States widows shows the latter to be higher. . . . No explanation for the differential is available." As for the effect of duration, it reported that, "The differential in mortality by duration ranges from only 3 percent below the average to 2 percent above the average."

### Methodology

The 1960-62 study employed an aggregate data approach, which necessitates certain compromises and approximations to fit the analysis to the data. In this study, the increased computer processing capabilities and the greater access to individual records presently possible permitted the use of microdata, which enabled the exposure-to-risk contribution of each life to be calculated, one by one, without applying any assumptions.[2]

[1] Francisco Bayo, "Mortality and Remarriage Experience for Widow Beneficiaries Under OASDI," **Transactions of the Society of Actuaries** (Vol. 21, Meetings Nos. 59A and 59B), April-May 1969.

In any individual-record mortality investigation, four dates must be known for each individual:

(1) The date of birth.

(2) If the individual died during the observation period, the date of death.

(3) If the individual was not under observation at the beginning of the period, the date of entry.

(4) If he or she was not under observation at the end of the period, the date of exit.

In studies such as the present investigation, where exposure is allocated between the widowed and married states, a fifth date is needed: if widowed, the date of the husband's death. All of these dates appear in the administrative files, with names such as "date of initial entitlement," "date of termination," and "date of death of primary."

The procedure for obtaining the number of deaths and the person-years of risk exposure passes through three stages. First, it is determined whether or not death occurred during the observation period. If so, it is further determined (1) at what age death occurred, (2) whether the deceased was a widow or a wife, and (3) if a widow, at what duration of widowhood death occurred. In the second stage, exposure in the married state is identified and distributed by age. In the third stage, exposure in the widowed state is identified and distributed by age and duration of widowhood. A woman who is a wife beneficiary and then a widow beneficiary during the observation period contributes exposure to both the married and widowed states. The final step, of course, is to obtain mortality rates by dividing the number of deaths by the person-years of exposure for each age/marital status/duration category.

A 1-in-100 sample[3] was selected of older women who in 1973-77 either were widowed and became entitled to widow's benefits at the time of the husband's death or were entitled to wife's benefits as the spouse of a retired beneficiary. The experience of this sample was then followed from 1973 to 1980. Plans have been made to expand this study to a 100-percent basis to give its findings greater precision, but even on a 1-percent basis the experience was quite substantial, consisting of 3,370 deaths and 86,123 person-years of experience in the widowed state, and 12,172 deaths and 530,767 person-years of experience in the married state.

It must be pointed out that the widows in this study include those who remarried. The 1965 Amendments to the Social Security Act permitted the continued payment of widow's benefits after remarriage, albeit at a reduced rate, while the 1977 Amendments eliminated the reduction provision, so that now the fact of remarriage is not even a part of the administrative record. (The study of the 1960-62 mortality experience of widow beneficiaries, on the other hand, included only widows who had not remarried.) Thus the finding of a substantial mortality differential between widow and wife beneficiaries, presented in detail below, should be of interest to epidemiologists. Sheps,[4] for example, has argued that the evidence for excess widow mortality relative to that for wives based on the vital statistics system, which reflects current marital status, is biased because healthier widows are more likely to remarry and thereby pass from the widowed state.

## Findings

Mortality rates during the period 1973-80 for widow and wife beneficiaries in the study are shown in the upper panel of table 1 for 5-year age groups beginning with persons aged 60-64 and ending with those aged 85 or older. Comparable data from the vital statistics system are not directly available, the last investigation of mortality by marital status having been done for the period 1959-61.[5] However, if it is assumed that in 1977—

**Table 1.**—Mortality rates for older widows and wives: SSA administrative record system and the vital statistics system

| Age group | Mortality rates (per thousand) | | Ratio of rate for widows to rate for wives |
|---|---|---|---|
| | Widows | Wives | |
| | SSA administrative record system, 1973-80 | | |
| 60-64 | 13.0 | [1] 8.9 | 1.46 |
| 65-69 | 20.9 | 13.7 | 1.53 |
| 70-74 | 27.0 | 23.0 | 1.17 |
| 75-79 | 42.3 | 40.3 | 1.05 |
| 80-84 | 67.9 | 70.1 | .97 |
| 85 or older | 118.7 | 112.2 | 1.06 |
| | Vital statistics system, 1977 [2] | | |
| 60-64 | 15.3 | 10.8 | 1.41 |

[4] Mindel C. Sheps, "Marriage and Mortality," **American Journal of Public Health**, April 1961, pages 547-555.

[5] An investigation for 1979 is underway, however, at the National Center for Health Statistics, with results expected this fall.

which is about midway through the period 1973-80—(1) the relative differentials by marital status in mortality were as they were in 1959-61,[6] and (2) the relative population distributions by marital status were as they were at the time of the 1970 census,[7] then the age/sex-specific mortality rates reported by the National Center for Health Statistics for 1977[8] can be used to derive age/sex/marital status-specific rates. Rates for widows and wives obtained by this process are given in the lower panel of table 1.

An inspection of the table makes it clear that mortality rates from the SSA administrative record system generally are somewhat lower than the corresponding rates from the vital statistics system, not higher as hypothesized. The postulate underlying the hypothesized relationship was that women with more extensive work histories are likely to be healthier as a group. Therefore, it was reasoned, women who are not auxiliary beneficiaries, many of whom are primary-only retirement beneficiaries, will have lower mortality than auxiliary beneficiaries. Because the comparison shown here is not between auxiliary beneficiaries and primary-only beneficiaries with a common source of data, but instead between auxiliary beneficiaries and all widows and wives and from two sources, it is not clear whether it provides evidence to refute the postulate or whether some other interpretation is the correct one. That is, it may be that older widows and wives who are neither auxiliary nor primary-only retirement beneficiaries have high enough mortality rates so that mortality in the mix of these women with primary-only beneficiaries is greater than for auxiliary beneficiaries. Another possibility is that the late reporting of beneficiary deaths to SSA is not insubstantial, thus detracting from the comparability of SSA data with vital statistics data, although DelBene and Aziz have shown that ultimately only 2 percent of deaths of older women beneficiaries remain unreported to SSA.[9]

A mortality investigation on primary-only retirement beneficiaries is planned to provide a definitive test of the postulated work-health relationship. Meanwhile, a comparison of table 2 with the upper panel in table 1 sheds some light on the subject. Table 2 was prepared to improve the basis for comparing data on widow beneficiaries with information on wife beneficiaries. That is, comparisons based on table 1 data are biased because widow's benefits are larger than wife's benefits: Widows claiming benefits at age 65 are paid 100 percent of the benefit earned by their spouse, compared with a 50-percent rate for wife claimants at age 65, with reduction factors for earlier claims similar to, though not exactly equal to, reduction factors for primary retirement before age 65. As a result, women who are entitled to primary retirement benefits of about 50 percent to 100 percent of the benefit earned by their spouse can be widow beneficiaries if the spouse is deceased, but cannot be wife beneficiaries if he is not. Accordingly, table 2 was constructed with this subset of widow beneficiaries excluded.

**Table 2.**—Mortality rates for widow and wife beneficiaries, excluding widow beneficiaries with primary benefits at least as large as half their widow's benefit

| Age group | Mortality rates (per thousand) | | Ratio of rate for widows to rate for wives |
|---|---|---|---|
| | Widows | Wives | |
| 60-64 | 14.3 | [1] 8.9 | 1.61 |
| 65-69 | 25.3 | 13.7 | 1.85 |
| 70-74 | 32.2 | 23.0 | 1.40 |
| 75-79 | 46.6 | 40.3 | 1.16 |
| 80-84 | 74.2 | 70.1 | 1.06 |
| 85 or older | 126.2 | 112.2 | 1.12 |

[1] Wife beneficiaries are at least age 62.

A comparison of table 2 with table 1 makes clear that widows with work histories extensive enough to earn them entitlement to primary retirement benefits of about 50 percent to 100 percent of the benefit earned by their spouse have lower mortality rates than do widows with less or no work experience. This finding suggests that primary-only retirement beneficiaries would also have lower mortality rates than auxiliary beneficiaries, and that the comparison of SSA program data on auxiliary beneficiaries with vital statistics for all widows and wives that did not yield this result was not suitable for measuring the relationship.

In any event, the findings from this study on the correlation between mortality and auxiliary beneficiary status are inconclusive and do not support any recommendation with respect to improving population projection for program cost estimation to reflect beneficiary status in determining mortality rates. With respect to the differential in widow mortality rates by duration of widowhood—the second objective of this investigation—no change in population projection methodology is again recommended, because, as table 3 shows, the study found no clear pattern of differential by duration of widowhood in age-specific rates.

The insensitivity of excess mortality for widows or widowers to duration of widowhood has been noted in a number of epidemiological studies, including a very recent investigation by the Johns Hopkins Training Center for Public Health Research conducted in Wash-

| 75-79 | 42.4 | 42.0 | 42.6 | 42.1 |
| 80-84 | 65.0 | 62.2 | 70.7 | 70.3 |
| 85 or older | 130.7 | 116.7 | 113.6 | 118.5 |

ington County, Maryland.[10] On the other hand, a major early study of widowers in England and Wales found that mortality rates were excessive during the first 6 months following the wife's death and then decreased gradually to the level of married men.[11] No consensus on the matter exists.

## Conclusion

It cannot be recommended that either beneficiary status or duration of widowhood be given recognition in the calculation and projection of mortality rates for program cost estimation, based on this study. The significance of beneficiary status is not yet clear, while the effect of duration of widowhood follows no pattern.

Widow beneficiaries have higher mortality rates than wife beneficiaries, even though the former group includes widows who remarry.

# Employment and Supplemental Security Income*

In the late 1970's, increasing concern was expressed about the overall cost, caseload, and work disincentive effects of disability benefit programs, including those administered by the Social Security Administration. Some provisions of these programs were perceived as hampering the attempts of disabled recipients to get and keep jobs and eventually return to some measure of self-support. These concerns were instrumental in the passage of the Social Security Disability Amendments of 1980 (Public Law 96-265), which included changes intended to encourage the disabled to return to work.

This note, based on administrative record data, examines the relationship between employment and Supplemental Security Income (SSI) benefits, including a discussion of income exclusions, age, sex, and race. Together with a similar study of 1975 data, this analysis provides baseline information against which to judge the effect of the 1980 amendments on the employment of SSI disabled beneficiaries.

## Summary

In February 1979, approximately 123,000 persons, or about 3 percent of all recipients of federally administered SSI payments were employed. This proportion has remained about the same since the beginning of the program. Not only do few SSI recipients work, but those who do have low earnings—an average of $88 per month in 1979. Because of income exclusions, an average of only 17 percent of these earnings were considered countable income in determining the amount of the SSI payment.

Although the overall percentage has not changed, the SSI recipients working in early 1979 were younger than those found in an earlier study.[1] The dollar amount of their monthly earnings rose from $75 in 1975 to $88 in early 1979, an increase of 17 percent. During the same period, however, the national average hourly earnings increased 26 percent.[2] The employment rate among disabled recipients increased, while that for aged recipients decreased.

## Role of Earnings

Eligibility for SSI and payment amount depend in part on a person's earned and unearned income. Earned income is defined as wages or net earnings from self-employment; unearned income is all other income, including Social Security benefits, veterans' benefits, and other public and private pensions.

The law permits an individual to exclude a portion of income derived from earnings when determining countable income. Countable income is gross income minus allowable exclusions—income not counted in computing the standard payment amount. The first $20 per month of earned or unearned income is excluded for all individuals and couples. The first $65 per month of earnings and one-half the remainder is also excluded.

In February 1979, the monthly Federal SSI benefit rate was $189.40 for individuals and $284.10 for couples. An employed individual who lived in his or her own home was eligible for at least some Federal SSI if he or she had no other income and had earnings of less than $464 per month ($653 for couples). Those SSI recipients who received State supplementation payments could have higher total earnings depending on the amount of the supplement.

[2] Council of Economic Advisors, **Economic Report of the President**, February 1982, table B-38, page 276.

Both blind and disabled persons are permitted special earned income exclusions necessary to fulfill an approved plan for self-support. Blind individuals are further permitted to exclude ordinary and necessary work expenses, and they remain eligible for payments at a level of earnings that would result in termination of payments to a disabled recipient.

## Earnings and Countable Income

The 123,000 employed SSI recipients included 2 percent of the aged beneficiaries, 6 percent of the blind recipients, and 4 percent of the disabled (table 1). Gross monthly earnings averaged $87.53. Blind recipients had the highest average monthly earnings ($313.95), reflecting the extra work-expense exclusions available to them. Disabled adults earned an average of $81.25, and the average earnings of the aged were $75.69.

Two out of three employed SSI recipients earned less than $70 in February 1979 and therefore were not subject to a reduction in SSI payments. A majority (52 percent) of blind workers had earnings in excess of $200 (table 2).

Of those recipients with countable income, 64 percent had less than $40, and 43 percent had less than $20 (table 3). Only among the blind did a substantial proportion have countable income above $100 (28 percent). The overall average amount of countable income was $43; for blind recipients, the average was $73.

As mentioned earlier, blind recipients may exclude from income certain work expenses. Over 2,200 blind adult SSI recipients had such exclusions in February 1979 (table 4). Of those blind adults earning over $300, most had excludable work expenses. By contrast, just 12 percent of those earning below $70 had such exclusions. The average monthly exclusion was $148.50, but the amount ranged from $31.54 for persons earning $20-$39 to $247.83 for those making $600 or more.

**Table 1.**—Supplemental Security Income: Number and percent of persons receiving federally administered payments with employment, and average monthly earnings, February 1979 and December 1975

| Reason for eligibility | All SSI recipients | Number employed | Percent with employment | Average monthly earnings |
|---|---|---|---|---|
| | February 1979 | | | |
| Total | 4,226,528 | [1] 123,326 | 2.9 | $87.53 |
| Adults | 4,026.040 | 121,634 | 3.0 | 87.33 |
| Aged | 1,962,124 | 40,188 | 2.0 | 75.69 |
| Blind | 71,568 | 4,142 | 5.8 | 313.95 |
| Disabled | 1,992,348 | 77,304 | 3.9 | 81.25 |
| Children | 200,488 | 1,692 | .8 | 101.95 |
| Blind | 5,883 | 55 | .9 | 166.97 |
| Disabled | 194,605 | 1,637 | .8 | 99.76 |
| | December 1975 | | | |
| Total | 4,314,275 | 115,617 | 2.7 | $74.56 |
| Adults | 4,186,100 | 114,483 | 2.7 | 74.52 |
| Aged | 2,307,105 | 58,906 | 2.6 | 63.48 |
| Blind | 70,143 | 4,569 | 6.5 | 232.34 |
| Disabled | 1,808,852 | 51,008 | 2.8 | 73.07 |
| Children | 128,175 | 1,134 | .9 | 88.65 |
| Blind | 4,346 | 75 | 1.7 | 166.29 |
| Disabled | 123,829 | 1,059 | .9 | 83.14 |

[1] Caseload figures for the same time period indicate 129,600 SSI recipients employed. The difference between that figure and the study file represents persons with earnings in February whose SSI payments are scheduled for termination.

[1] Includes 567 blind and disabled children.

## Characteristics of Employed Recipients

The employed recipients as a group were younger than the recipient population as a whole. Twenty-seven percent of the employed recipients were under age 30, compared with only 12 percent for the total recipient population. Thirty-six percent of the working blind and 40 percent of the working disabled adults were under age 30, compared with 16 percent for all blind and disabled adults (table 5). On the other hand, although one-fourth of all disabled adult recipients were aged 50–59, only 14 percent of the employed disabled adults were in that age range. There was little variation in average earnings by age.

**Table 4.**—Supplemental Security Income: Earnings distribution of employed blind adults receiving federally administered payments, number and percent with excludable work expenses, and average monthly exclusion, February 1979

| Gross monthly earnings | Blind adults with employment | Blind adults with excludable work expenses | | |
|---|---|---|---|---|
| | | Number | Percent | Average monthly exclusion |
| Total | 4,142 | 2,239 | 54.2 | $148.50 |
| Less than $20 | 664 | 123 | 18.5 | 97.37 |
| $20–$39 | 291 | 10 | 3.4 | 31.54 |
| $40–$59 | 246 | 21 | 8.5 | 22.05 |
| $60–$69 | 176 | 17 | 9.7 | 28.33 |
| $70–$79 | 77 | 20 | 26.0 | 28.70 |
| $80–$99 | 131 | 34 | 26.0 | 36.55 |
| $100–$149 | 239 | 121 | 50.6 | 42.84 |
| $150–$199 | 175 | 105 | 60.0 | 155.20 |
| $200–$249 | 187 | 119 | 63.6 | 66.97 |
| $250–$299 | 148 | 104 | 70.3 | 74.66 |
| $300–$399 | 329 | 264 | 80.2 | 111.94 |
| $400–$499 | 440 | 371 | 84.3 | 140.17 |
| $500–$599 | 388 | 349 | 90.0 | 156.66 |
| $600 or more | 651 | 581 | 89.3 | 247.83 |

Women represented more than half of the employed recipients in February 1979, comprising 60 percent of the aged and 50 percent of the disabled. Monthly earnings averaged $82 for women and $94 for men. The proportion of employed women was lower than their representation in the overall SSI population (65 percent). This lower employment rate among women reflects, in part, their age. Three-fifths of all women recipients were over age 65, compared with 45 percent of the men.

The racial distribution of the employed SSI recipients was similar to that shown for the SSI population as a whole.[3] In both groups (total and employed) whites accounted for two-thirds of all recipients. Variations

existed, however, within the individual eligibility categories. Sixty-five percent of all disabled recipients were white, although among those with employment, 78 percent were white. Among the aged, whites accounted for 65 percent of all recipients but only 50 percent of those with employment. Blacks, who accounted for just 25 percent of all aged recipients, made up 45 percent of those with employment.

Employment among SSI recipients ranged from 7 percent in Iowa, Montana, and Wyoming to 2 percent in

[1] Average not shown for fewer than 5 persons.

Alabama, New Mexico, Oklahoma, and West Virginia (table 6). Six of the eight States with the highest employment levels were in the North Central region (Indiana, Iowa, Kansas, Minnesota, South Dakota, and Wisconsin).

## Employment and SSI, 1975 and 1979

A comparison of the 1979 employment file with a 1975 study of employed SSI recipients indicated that there had been some changes. Working recipients were younger in 1979 than in 1975—27 percent were under age 30, compared with 19 percent in 1975. Thirty-seven percent of the workers in 1979 were aged 65 or older, while in the 1975 study more than half of the workers were in that age bracket. As a proportion of all SSI recipients under age 30, the employed increased from 5.2 percent in 1975 to 6.4 percent in 1979. The proportion of recipients over age 65 who had earnings decreased from 2.4 percent to 1.9 percent.

Disabled adult recipients were more likely to have earnings in 1979. They accounted for 47 percent of the SSI caseload, but 63 percent of those employed. In 1975, on the other hand, the disabled made up 42 percent of the total SSI caseload and 44 percent of the employed.

One significant point is that the proportion of working recipients whose earnings were less than $70 per month remained the same in 1979 as in 1975—about 66 percent. Because the earned income exclusion is $65 per month plus one-half of remaining earnings, very few of these people would have had any reduction in their Federal SSI benefit because of earnings.

The proportion of workers who did have countable earnings increased between 1975 and 1979 (30 percent and 34 percent, respectively). In addition, the amount of income increased. Of those with countable earnings in 1975, only 3 percent received more than $50 per month; by 1979, the figure was 29 percent.[4]

## Social Security Disability Amendments of 1980

As mentioned earlier, some of the changes made by the 1980 disability amendments were designed to encourage disabled SSI recipients to return to work. These include:

(1) **Special monthly benefits.** Cash benefits (and Medicaid services) will continue for disabled recipients who have completed the 9-month trial work period and continue to earn at or above the level that is considered substantial gainful activity (SGA).[5] Previously these benefits were terminated after the trial work period if earnings continued above the SGA level, even if the earnings were not high enough to reduce the cash benefit to zero. Medicaid benefits may, if necessary, continue for up to 36 months after cash benefits cease.

(2) **Deduction of impairment-related work expenses.** Severely disabled people often must incur significant costs to enable them to work; for example, transportation costs, special equipment, drugs to control their condition, attendant-care services and other medical and nonmedical services. Under Public Law 96-265 some portion of these expenses may be deducted from earnings before a determination is made as to whether the work constitutes SGA.

(3) **Considering money earned in sheltered workshops as earned income.** This change allows recipients who work in sheltered workshops or work-activity centers to have the benefit of the earned income exclusions that were not available when these monies were considered unearned income.

The law provides that the Social Security Administration monitor and evaluate the impact of these changes and report its findings to the Congress at the end of the 3-year special benefits experiment. Data are not yet available on the number of disabled recipients who have been affected by these changes.

---

[4] In comparable dollars, the 1975 proportion would be 7 percent.

[5] In 1979, the amount of earnings usually considered to indicate SGA was $280 per month; currently it is $300 per month.

---

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

---

[1] Benefit expenditures from the Federal Hospital Insurance and Supplementary Medical Insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

**Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940-81**

[In thousands. For explanatory footnotes on programs, see table M-1]

---

[1] Includes auxiliaries or dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Fewer than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

---

[1] Represents contributions of employees, employers, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the Hospital Insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968 for military credits and Federal payment for special age-72 benefits (see footnote 4).

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old-age reserve account, January 1937–December 1939.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[11] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

---

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

Source: Unpublished Treasury monthly reports keyed to **Monthly and Final Statement of Receipts and Expenditures of the U.S. Government.**

## Table M-8.—Supplementary Medical Insurance trust fund: Status, 1967–82

[In thousands. Calendar year and fiscal year data appear in alternate months of the **Bulletin**.]

| Period | Receipts | | | Expenditures | | Assets at end of period | | |
|---|---|---|---|---|---|---|---|---|

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under sec. 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

---

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

[4] Represents amount before final rounding of benefits.

**Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82**

[Data contain some duplication arising from dual entitlement; see the **1980 Annual Statistical Supplement**, p. 9]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Represents amount before final rounding of benefits.

---

[1] Includes from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 18.

[2] Mostly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available

[5] Represents amount before final rounding of benefits.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–82

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2 3] | Children [4] | Widows and widowers [2 5] | Children [4] | Widowed mothers [6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | Average benefits in current-payment status at end of period | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $20.28 | $12.22 | $19.61 | $13.09 | ... | ... | ... | ... |
| 1950 | 43.86 | 23.60 | 17.05 | 36.54 | 28.43 | 34.24 | 36.69 | ... | ... | ... | ... |
| 1960 | 74.04 | 38.72 | 28.25 | 57.68 | 51.37 | 59.29 | 60.31 | $89.31 | $34.41 | $30.21 | ... |
| 1965 | 83.92 | 43.63 | 31.98 | 73.75 | 61.26 | 65.45 | 76.03 | 97.76 | 34.96 | 31.61 | ... |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[7] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[10] Represents amount before final rounding of benefits.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and type of benefit, 1940-82

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement**, p. 9]

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

**Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940–82**

| Period | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] The June awards include only those with the new benefit rates.

[8] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

| June [4] | 81 | 70 | 86 | 19 | 15 | 79 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because earnings of the beneficiary or the worker on whose account benefits are paid exceed the earnings test amount; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] The June awards include only those with the new benefit rates.

[5] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| December | 56,097 | 24,829 | 6,969 | 24,299 |
| 1982 | | | | |
| January | 62,562 | 28,317 | 7,601 | 26,644 |
| February | 56,319 | 24,565 | 6,616 | 25,138 |
| March | 62,803 | 27,593 | 7,464 | 27,746 |
| April | 66,407 | 30,025 | 8,126 | 28,256 |
| May [5] | 69,957 | 30,997 | 8,834 | 30,126 |
| June [4] | 29,630 | 14,553 | 3,556 | 11,521 |

[1] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] The June awards include only those with the new benefit rates.

[5] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

## Table M-18.—Supplemental Security Income: Number of persons receiving federally administered payments and total amount, by reason for eligibility, June 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,956,880 | $729,087 | $572,356 | $156,731 |
| Aged | 1,626,106 | 225,174 | 164,798 | 60,376 |
| Blind | [2] 78,126 | 17,902 | 13,000 | 4,902 |
| Disabled | [3] 2,252,648 | 486,011 | 394,558 | 91,454 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 429,000 persons aged 65 and over.

## Table M-20.—Supplemental Security Income: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–82

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |
| 1975 | 702,147 | 259,823 | 5,834 | 436,490 |
| 1976 | 542,355 | 171,798 | 4,735 | 365,822 |
| 1977 | 557,570 | 189,750 | 5,753 | 362,067 |
| 1978 | 532,447 | 177,224 | 6,375 | 348,848 |
| 1979 | 483,993 | 159,927 | 6,476 | 317,590 |
| 1980 | 496,137 | 169,862 | 7,576 | 318,699 |
| 1981 [2] | 315,429 | 89,414 | 5,429 | 220,586 |
| 1981 | | | | |
| March | 34,588 | 10,466 | 549 | 23,573 |
| April | 41,286 | 11,837 | 748 | 28,701 |
| May | 25,365 | 6,448 | 425 | 18,492 |
| June | 33,219 | 9,927 | 578 | 22,714 |
| July | 33,266 | 9,625 | 572 | 23,069 |
| August | 28,211 | 7,904 | 501 | 19,806 |
| September [3] | ... | ... | ... | ... |
| October | 29,241 | 7,428 | 529 | 21,284 |
| November | 29,991 | 8,194 | 555 | 21,242 |
| December | 26,354 | 6,869 | 430 | 19,055 |
| 1982 | | | | |
| January | 28,595 | 7,503 | 489 | 20,603 |
| February | 20,345 | 5,582 | 305 | 14,458 |
| March | 33,638 | 10,036 | 582 | 23,020 |

[1] Reflects data for May–December.

[2] Excludes January and September data.

[3] Data not available.

## Table M-19.—Supplemental Security Income: Number of persons receiving federally administered payments and total amount, 1974–82 [1]

| Period | Number of persons [2] | | | | Amount of payments (in thousands) | | |
|---|---|---|---|---|---|---|---|
| | Total | Aged | Blind | Disabled | Total | Federal SSI | State supplementation [2] |
| January 1974 | 3,215,632 | 1,865,109 | 72,390 | 1,278,133 | $365,149 | $260,159 | $104,989 |

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska, February 1982 data for Minnesota and January 1982 data for Wyoming; data not available for April 1982.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for mandatory and optional programs in New Hampshire, South Dakota, and Virginia; for optional programs in North Dakota.

[2] Includes data not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska and February 1982 data for Minnesota; data not available for April 1982.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] No persons receiving State supplementation only.

[7] Data not available.

## Earnings Replacement Rates and Total Income

**(Continued from page 22)**

the relationship to be strictly linear, a term for the square of earnings was included in the equation. For married couples, the estimated relationship is close to linear, with the earnings-squared term rather low in relation to the earnings term (x). Around the mean earnings level, $15,190, the combined regression parameters indicate that estimated Social Security-only replacement rates fall by 2.75 percentage points for every $1,000 rise in preretirement earnings. In contrast, total (pretax) replacement rates fall less, 2.14 percentage points, and after-tax rates fall even less, 2.03 percentage points.[8]

For nonmarried women the relationship is highly curvilinear, as indicated by the relatively large coefficients on the squared earnings term. The same general patterns may be seen as with married couples, however: Total replacement rates drop less as earnings increase than do Social Security replacement rates, and the rates drop even less when analyzed after taxes. Around the mean earnings level, $8,075, Social Security replacement rates drop an estimated 5.7 percentage points for every $1,000 rise in earnings, compared with 3.8 points for pretax total replacement rates, and 3.5 points after taxes.

---

[8] Because of the second-degree term (earnings-squared), the rate of change of estimated replacement rate with respect to earnings level is not constant. By evaluating the first derivative at the mean level of preretirement earnings, these rates of change can be compared. For instance, for the Social Security replacement rate equation for married couples, with "x" expressed in *thousands*,

$$\begin{aligned} y &= 103.7 - 6.30x + .117x^2 \\ dy/dx &= -6.30 + 2(.117)x \\ &= -6.30 + .234x \\ &= -2.75 \text{ at } x = \$15.19 \text{ thousands} \end{aligned}$$

The low R-squares (shown in chart 2) may be attributed to the fact that the regressions used individual-level data rather than grouped measures such as means or medians. For married couples especially, many factors not in the equations may influence replacement rates. Nevertheless, all coefficients are significantly different from zero.

## Table M-28.—Public assistance: Number of recipients and average monthly payments, by program, 1940–80

[Data subject to revision. Except for emergency assistance, excludes vendor payments for medical care and cases receiving only such payment]

| Period | Old-age assistance [1] | Aid to the blind [1] [2] | Aid to the permanently and totally disabled [1] | Aid to Families with Dependent Children |  |  | General assistance [4] |  | Emergency asistance [5] |

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by Supplemental Security Income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and one or both parents or one caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by Supplemental Security Income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

**Table M-30.**—Aid to Families with Dependent Children: Number of families and recipients, by State, January-March 1981

| State | January 1981 | | | February 1981 | | | March 1981 | | |
|---|---|---|---|---|---|---|---|---|---|

[1] Benefits payable under the black lung program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the U.S. Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940-81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] |  | Initial claims (weekly average) [4] | All types of compensated unemployment |  |  |  | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
|  | Number of workers [2] | Percent of covered employment [3] |  | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries |  |  |  |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, Aid to Families with Dependent Children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War II bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## Table M-40.—Consumer Price Index for Urban and Clerical Workers, 1940-81[1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1940 | 42.0 | ... | 36.8 | 35.2 | 42.8 | 52.4 | 42.7 | 40.2 | 46.1 | 48.3 | 43.6 |

## Program Operations

### OASDI Benefits

In July 1982, monthly cash benefits were awarded to 328,095 persons under the Old-Age, Survivors, and Disability Insurance (OASDI) program. Forty-two percent of all awards were made to retired workers and 8 percent to disabled workers. Eighty-two percent of all awards and 86 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $398.19 for retired workers and $443.63 for disabled workers.[1]

For July 1982, 35,375,040 beneficiaries under the OASDI program received $13.1 billion in monthly cash benefits. Retired workers numbered 20,440,782, or 58 percent of all OASDI beneficiaries. Average monthly benefit amounts payable in July 1982 to retired and disabled workers were $416.24 and $442.50, respectively.

### SSI Payments

**Federally administered payments.** In July 1982, 3,927,700 persons received federally administered Supplemental Security Income (SSI) payments, down 29,100 from the total in June. The number of aged recipients decreased by 24,200 to 1,601,900, the disabled by 4,700 to 2,248,000, and the blind by 300 to 77,900. Nineteen out of 51 States reported a higher overall SSI caseload in July. The number of disabled cases rose in 35 States, the blind in 27, and the aged in 4.

Federally administered payments in July totaled $782.5 million, up $53.4 million from the June figure. Federal SSI payments rose by $59.7 million to $632 million. This increase was caused in part by the 7.4-percent Federal benefit rate increase that became effective on July 1, 1982. Federally administered State supplementation of $150.5 million amounted to a decrease of $6.2 million from the previous month.

**State-administered supplementary payments.** In May 1982, the number of persons receiving State-administered supplementation continued its downward trend to a total of 247,400. Expenditures for these State supplements also declined during the 1-month period, from $20.3 million in April to $20.1 million in May.

| OASDI | August 1982 | July 1982 | August 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,278 | 35,375 | 35,792 |
| Aged 65 and over, total | 24,675 | 24,626 | 24,110 |
| Retired workers | 18,287 | 18,244 | 17,798 |
| Survivors and dependents | 6,321 | 6,314 | 6,231 |
| Special age–72 beneficiaries | 67 | 68 | 81 |
| Under age 65, total | 10,603 | 10,749 | 11,682 |
| Retired workers | 2,210 | 2,197 | 2,130 |
| Disabled workers | 2,657 | 2,682 | 2,814 |
| Survivors and dependents | 5,736 | 5,870 | 6,738 |
| **Total monthly benefits** (in millions)[1] | $13,087 | $13,089 | $12,103 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $416.60 | $416.24 | $383.81 |
| Disabled workers | 442.16 | 442.50 | 413.61 |
| Aged widows and widowers | 374.32 | 373.91 | 344.97 |
| Children of deceased workers | 290.33 | 289.61 | 269.20 |
| **Average benefits awarded:** | | | |
| Retired workers | $413.50 | $419.96 | $393.67 |
| Disabled workers | 440.94 | 442.98 | 431.42 |
| Aged widows and widowers | 376.37 | 345.15 | 338.91 |
| Children of deceased workers | 275.01 | 273.13 | 260.22 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

---

[1] The benefit amounts referred to in this section are the amounts before the new rounding of benefits procedure that went into effect in June.

# The Earnings Replacement Rate of Old-Age Benefits in 12 Countries, 1969-80

by Jonathan Aldrich*

This article reports the findings of the first cross-national study since 1975 of earnings replacement rates—the proportion of immediate preretirement earnings replaced by social security retirement benefits. In the countries studied—Austria, Canada, Denmark, France, the Federal Republic of Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom, and the United States—the replacement rates in recent years seem to have continued their upward trend, although they appear to be rising more slowly than before, and under some interpretations seem to be leveling off. In 1980, the United States was fifth among the countries studied in replacement rates for retired couples (one working spouse, one nonworking spouse) and fell within the middle range for single aged beneficiaries: Six countries provided higher benefit levels, four provided lower benefits, and one provided benefits at the same level.

The purpose of this article is to analyze the development of old-age benefit levels in a cross-national context since 1975. One of the most useful bases for such an international evaluation is the earnings replacement rate, a comparison of the old-age social security benefit at the time of retirement to immediate preretirement earnings. The concept of earnings replacement as a standard for international comparison was introduced in a 1970 **Social Security Bulletin** article, and subsequently the material was updated and expanded to present replacement rates for a number of countries over the period 1965-75.[1] Replacement rates during the 1960's and early 1970's generally showed an increasing trend, rising substantially in some cases as efforts were made to increase "real" retirement benefits. Although some data are included for earlier years, this article focuses on replacement rates during the period 1975-80 in 12 countries—Austria, Canada, Denmark, France, the Federal Republic of Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom, and the United States. In recent years, replacement rates seem to have continued their upward trend, if more slowly than before. When the delayed effects of previous legislation and policy implementation are isolated, however, an underlying trend toward the leveling-off of replacement rates in the countries studied becomes discernible.

In the period immediately following World War II, many Western European countries continued to operate existing social security systems. The need for income maintenance for the elderly was especially great during this period, but because of the economic upheaval caused by the war, few governments had the means to provide it extensively. Most old-age pension programs could provide only limited income maintenance for a limited number of the aged. With economic reconstruction, both the level and extent of benefits soon came to be considered inadequate. Rising expectations, spurred in part by the economic boom of the 1950's, formed the basis for social security program expansion. In response, a number of systems were restructured during the late 1950's and the 1960's. Coverage was extended to reach many of those previously excluded and benefit levels were greatly increased. In some cases, whole programs were added to provide an additional layer of earnings-related benefits.

The role of social security financing was a decisive factor in program expansion during the 1950's and

The nations studied in 1978 were the same as in 1982 except that Japan has been substituted for Norway in this article. In 1970, the same countries were studied as in 1978 except that Belgium was also included.

1960's. Pay-as-you-go financing allowed increases in benefit levels and extension of coverage to be paid out of increasing current revenues. Wage-linked social security revenues grew in real terms during the 1950's as wage gains far exceeded price increases. In addition, revenues grew as contribution rates were raised. With real incomes rising, it was possible to direct a larger and larger proportion of personal income to the social insurance function while at the same time sustaining substantial growth in real disposable income.

Increased financing capacity put pressure on legislators to expand and upgrade programs. One of the results was an increase in retirement benefit levels throughout the 1960's and 1970's. Yet the program expansion of the 1960's and 1970's was based on projections that assumed the continuation of the economic growth of the 1950's and 1960's.

The recessionary climate appeared unexpectedly after 1973. In a number of the countries studied (for example, Austria, West Germany, the Netherlands, and Switzerland) wages began to decelerate. In others, wages accelerated slightly, but, in all of the countries studied, the gap between wage gains and price inflation narrowed. The net result was a decrease in average annual real wage gains. With real wage growth decelerating, the real increases in social security revenues that were experienced during the 1950's and 1960's began to slow. This, in turn, was compounded by the effect of increased unemployment.

It might be expected, therefore, that replacement rates would have shown an overall tendency to increase before the 1974 recession and a tendency to level off or fall as social security financing was squeezed by the recession during the period 1975-80. In fact, replacement rates did rise before 1975 in almost all of the 12 countries studied. But the 1975-80 recessionary period also saw a rising trend for replacement rates in a number of countries.

Why did replacement rates rise when social security financing was becoming increasingly strained? The answer appears to lie both in the structure of certain benefit formulas and in the process of social security benefit structure changes.

As will be discussed subsequently, technical details of certain benefit formulas can lead to significant changes in replacement rates as the growth rates of workers' earnings change. Formulas that define the retirement benefit as a percentage of average earnings over a given number of years tend to produce falling replacement rates when the rate of increase in money earnings levels is accelerating, and rising replacement rates when earnings increases are decelerating, other things being equal. In a number of the countries studied, the rate of increase in wages began to slow during the period 1975-80, with the result that in countries having this type of formula, replacement rates increased after 1975.

There appear to be two ways in which the process of social security benefit structure change delayed adjustment to the new economic realities. In some cases, rising replacement rates after 1975 can be attributed to the transitional period associated with social security benefit level change. In two countries (Canada and Sweden[2]), supplementary earnings-related programs were added to basic old-age, survivors, and disability insurance programs, and in one (Denmark) a benefit scaled to years of employment under social security was added, causing increasing benefit levels to be phased in over a number of years.

Thus, in these countries, programs introduced in the 1960's were still helping to gradually increase benefit levels until the late 1970's. This meant that the financing experience of the 1950's and 1960's, on which many of the programs introduced in the 1960's were based, continued to be translated into policy into the 1970's. The time lag that developed between financing experience and policy implementation was substantial.

In other cases, the recessionary financing squeeze after 1974 had only a marginal impact on current benefit levels because the depth and duration of the recessionary trend had first to be recognized before serious debate could start on policy changes. As these debates proceed and the responses are implemented, the impact on benefit levels may, likewise, begin to show only after a substantial time lag.

The underlying trend toward a leveling off of replacement rates becomes clearer when the lagged effects of benefit formula structure and program phase-in are discounted. Little new legislation aimed at increasing benefit levels was introduced after 1975 except in countries where replacement rates were relatively low (Japan and the United Kingdom). In other countries, specifically West Germany and Switzerland, some decreases in replacement rates were effected through modifications of the wage-revaluation processes used in benefit computation. However, the policies producing these decreases were undertaken primarily with an eye to the long-run financing problems associated with an aging population and the maturing of expanded old-age benefit rights. If the response to current economic conditions is a contraction of social security expenditures to better reflect revenues, the upward trend of replacement rates before 1975 and the leveling off thereafter may be precursors of an eventual downward drift in replacement rates over the coming years.

## Replacement Rates in 1980

Table 1 presents the 1980 earnings replacement rate for an average wage-earner over a full career in the

**Table 1.**—Replacement rates of social security old-age pensions for workers with average wages in manufacturing, and for couples, selected countries, 1969–80

| Country | Pension as percent of earnings in year before retirement | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Single worker | | | | | | Aged couple | | | | | |
| | 1969 | 1975 | 1977 | 1978 | 1979 | 1980 | 1969 | 1975 | 1977 | 1978 | 1979 | 1980 |
| Austria | 67 | 63 | 64 | 65 | 67 | 68 | 67 | 63 | 64 | 65 | 67 | 68 |
| Canada | 24 | 35 | 33 | 32 | 33 | 34 | 41 | 47 | 47 | 47 | 48 | 49 |
| Denmark | 31 | 29 | 27 | 28 | 30 | 29 | 45 | 44 | 44 | 48 | 54 | 52 |
| France | 41 | 60 | 64 | 67 | 67 | 66 | 56 | 74 | 78 | 79 | 77 | 75 |
| Federal Republic of Germany | 55 | 51 | 54 | 54 | 50 | 49 | 55 | 51 | 54 | 54 | 50 | 49 |
| Italy | 62 | 61 | 64 | 66 | 66 | 69 | 62 | 61 | 64 | 66 | 66 | 69 |
| Japan | 26 | 37 | 53 | 54 | 54 | 54 | 27 | 39 | 57 | 57 | 57 | 61 |
| Netherlands | 43 | 43 | 45 | 44 | 44 | 44 | 61 | 61 | 65 | 65 | 65 | 63 |
| Sweden | 42 | 57 | 59 | 63 | 68 | 68 | 56 | 73 | 73 | 79 | 79 | 83 |
| Switzerland | 28 | 40 | 39 | 38 | 37 | 37 | 45 | 60 | 59 | 58 | 56 | 55 |
| United Kingdom | 27 | 31 | 28 | 29 | 29 | 31 | 43 | 47 | 43 | 45 | 45 | 47 |
| United States | 30 | 38 | 40 | 41 | 41 | 44 | 44 | 58 | 60 | 61 | 62 | 66 |

manufacturing industry in each of the 12 countries studied. Replacement rates are also shown for selected years over the period 1969–79. Since a benefit supplement is payable to a dependent spouse in some countries but not in others, the replacement rates for single beneficiaries and retired couples are shown separately. Because three of the 12 countries (Austria, West Germany, and Italy) provide for no such supplement, the replacement rates shown are the same for both categories. The old-age benefits provided in the countries with no supplement were originally planned to support a retired couple. Of the nine countries providing spouses' supplements, two (Switzerland and the United States) provide a supplement equal to 50 percent of the insured worker's earned benefit, three (Canada, Denmark, and Sweden) have as a part of their social security benefit a universal flat-rate pension and provide the spouse of pensionable age with the flat-rate amount of the universal pension, two (the Netherlands and the United Kingdom) provide the spouse of pensionable age with a supplement equal to a percentage of the basic flat-rate benefit paid to an insured worker, and two (France and Japan) provide a flat-rate supplement that is adjusted on an ad hoc basis (for further details, see the program characteristics section).

The replacement rates shown here have not been adjusted to reflect the effect of differences in the treatment of social security benefits under the respective countries' income tax laws. In nine of the 12 countries, social security retirement benefits are included fully in taxable income. In one (West Germany), all or a portion of the benefit may be excluded, and, in two (Italy and the United States), benefits are fully excluded. In those countries where benefits are not subject to the income tax, the net replacement rate is somewhat higher than these figures would indicate.

### Couple's Benefit

The earnings replacement rate for aged couples in 1980 varied from 83 percent in Sweden to 47 percent in the United Kingdom. Seven of the 12 countries had replacement rates for aged couples of more than 60 percent, compared with only six of 12 in 1975 and only three of 12 in 1969. Among the 12 countries studied, the U.S. program places toward the bottom of the highest group, ranking fifth out of all the old-age programs surveyed. The replacement rate in 1980 was 65 percent or greater in five countries, between 55 percent and 65 percent in three countries, and less than 55 percent in four countries.

### Single Beneficiaries

Replacement rates for single beneficiaries in 1980 ranged from 69 percent in Italy to 29 percent in Denmark. Sweden and those countries that provide little or no spouses' supplement tend to offer higher replacement rates for single beneficiaries. In four countries, about two-thirds of preretirement earnings were provided by the retirement pension. Another four countries fell into a middle group where between 44 percent and 49 percent of earnings were replaced; in the remaining four countries, between 29 percent and 37 percent of earnings was replaced. Benefit levels for single beneficiaries in the United States fell in the middle range: Six countries provided higher benefit levels, four provided lower levels, and one had benefits at the same level.

## Trends in Replacement Rates, 1969–80

As noted earlier, two factors influenced the changes in earnings replacement rates over the period 1969–80. The first was the changing environment of wage and price levels. Since the replacement rate is a comparison of generally wage-determined benefits with preretirement wage levels, any shift in the rate of change of wages, or prices, where these are integrated into the benefit formula, will have a significant impact on replacement rates. The second factor was new legislation, which had both "immediate" effects (those having a one-time impact on benefit levels when social security legislation was promulgated) and "extended" effects (those having a continuing impact on benefit levels for years after promulgation).

### Effects of the Wage-Price Relationship

With regard to the wage-price relationship, the period 1969–80 can be divided into two segments with the recession of 1974 as the pivotal point. Before 1974, productivity gains had allowed substantial "real" wage increases, that is, wage increases that were considerably greater than consumer price increases. Since social security contributions amounted to a percentage of earnings or payroll, real wage increases over the postwar period led to increasing social security revenues. In addition, with real personal incomes increasing, a larger percentage of income could be spared for maintaining the income of the elderly. Thus, program expansion was further financed through increasing contribution rates. Austria, France, West Germany, Italy, Japan, the Netherlands, Switzerland, and the United States all increased their contribution rates for old-age, survivors, and disability insurance programs during the 1960's.

Real increases in social security revenues, however, slowed dramatically in the wake of the 1974 recession. One solution to this problem—increasing contribution rates—might have brought in the needed additional revenues for programs still in the process of expanding, but it became both politically and economically unfeasible as the recession deepened.

While wage-linked revenues were being squeezed by the recession, the expenditure side of many social security programs was reacting quite differently. Social security expenditures in many countries were linked to increases in consumer prices. In fact, in eight of the countries in this study, benefit amounts were adjusted to reflect changes in the consumer price index. During the 1960's and early 1970's, inflation followed a generally increasing trend in most industrialized countries. But, with the oil price increases of 1973 and 1974, inflation spurted forward, as did social security expenditures.

### Legislative Effects

Most of the legislation introduced from 1969 to 1974 had immediate effects on benefit levels. By 1975, these effects had resulted in increased earnings replacement rates in a number of the countries studied. France, Italy, Japan, Switzerland, and the United States all modified their benefit formulas during this period to provide increased benefit levels. But earlier legislation, especially provisions aimed at introducing supplementary, earnings-related social security programs, continued to have an impact on replacement rates in a number of countries well into the latter part of the decade. Canada, Denmark, and Sweden introduced such supplementary programs during the 1960's. Full supplementary pensions were not payable in these countries at the beginning of the 1970's, however, since the programs were still in the process of being phased in over several decades. For example, the Swedish supplementary pension program did not begin to award a full pension until 1980, when 20 years of coverage was accruable. Each year of coverage before 1980 entitled the eligible pensioner to one-twentieth, or 5 percent, of the full pension. The effects of such legislation were thus extended over several decades, gradually raising replacement rates automatically each year.

### Opposite Effects

The wage-price relationship and social security legislation in the countries studied appear to have generally had opposite effects on replacement rate levels according to the type of benefit formula in use in the particular country. In the pre-1974 period, high real-wage increases depressed the replacement rate in Austria, West Germany, and Italy, where benefit formulas use earnings bases that consistently lag behind the current earnings of individuals going into retirement. During the same period, social security legislation had the opposite effect in several other countries. Real benefit level increases were legislated in France, Japan, Switzerland, and the United States. In the remaining three countries (Canada, Sweden, and the United Kingdom) previous legislation led to increases in real benefit levels through a maturing process.

From 1975 to 1980, the effects shifted. Countries such as Austria and Italy with time-lagged earnings bases began to show increases in their replacement rates as wages began to decelerate. West German benefit levels showed the same effect until the computation of the earnings base was altered in 1978. On the other hand, little social security legislation was introduced to increase benefit levels during this period. In fact, in several countries (for example, West Germany and Switzerland), legislation was introduced to decrease benefit levels.

## Methodology

The 12 countries selected for this study are those with the most well-developed social security systems for which relevant data were available. They are the same countries included in the 1978 study except that Norway has been replaced by Japan. This change was made because it was felt that the Norwegian and Swedish pension programs were relatively similar, and that the Japanese old-age benefit program needed to be better understood because of Japan's growing importance in the current global framework.

The cross-section of benefit formula "types" presented in the 1978 article has been preserved. Four different approaches to income maintenance for the retired are represented—the two-tier benefit formula (Canada, Denmark, Sweden, and the United Kingdom), the two-part formula (Japan and Switzerland), the earnings-related benefit formula (Austria, France, West Germany, Italy, Switzerland, and the United States), and the flat-rate benefit formula (the Netherlands). Despite the variety of approaches and a wide divergence in replacement rates, it is interesting to note that no particular approach is necessarily associated with having a "high" or "low" replacement rate.

The difficulty of finding comparable wage figures for a number of years led to the use of wage figures published by the International Labour Organization (ILO). The statistical problems involved in establishing the definition of an "average worker" were dealt with in detail in the 1970 **Bulletin** article cited earlier. There, "average wages" were defined as those published by the ILO for men working in manufacturing. However, the lack of current data by sex of worker for all the countries studied in this article has made it necessary to use the average wages of all workers (both male and female) in manufacturing as published by the ILO. Therefore, although a high degree of consistency has been maintained between this study and the two previous studies, wage figures and the replacement rates computed from them may not be identical.

An average pension was computed from the wage record of the average worker in each country according to the pension formula in effect at the time. Although the earnings ceiling for pension computation purposes was taken into consideration, only in the case of Canada did annual wage figures for the average worker in manufacturing exceed the ceiling and have an impact on the replacement rates calculated. Benefits were computed on the basis of retirement at the beginning of the year in which the illustrative worker reached the statutory normal retirement age (usually, though not always, age 65) and were compared with average earnings in manufacturing in the year preceding retirement. Since pension levels are adjusted several times a year in certain countries, the annual pension calculated for this article may be less than the actual annual pension that would have been received by a beneficiary who earned average wages in manufacturing. This study focuses on the replacement rate at retirement without taking into consideration differentials that subsequently occur because of differences in tax treatment and different methods of indexation or adjustment after retirement.

The number of years that constitute a full career varies in the countries studied. A normal working life was considered to be 40 years for this study, and those countries that do not define a full pension in terms of qualifying years were ascribed a 40-year qualifying period when the maximum countable years exceeded 40. Of the five countries where 40 working years are assumed, two (Canada and Denmark) require 40 years of residency, two (Austria and West Germany) have a maximum coverage greater than 40 years, and in one (Italy) 40 years is considered maximum coverage. Three countries (France, Japan, and Sweden) have qualifying periods of less than 40 years. The remaining four countries require qualifying periods that are gradually being lengthened as the programs mature. At maturity, three of these (the Netherlands, Switzerland, and the United Kingdom) will have qualifying periods of between 44 and 49 years, and the United States will require only 35 years for a full pension.

It should be noted that the length of coverage has a substantial impact on the replacement rate. Of the 12 countries studied, five (Austria, Denmark, West Germany, Italy, and Japan) have formulas that directly take into consideration the length of the coverage period. The length of coverage ascribed to each country in this article is not based on an average coverage figure for workers in manufacturing, but represents the expected working life of an employee in manufacturing with a focus on standardization across national boundaries. The calculated replacement rates therefore do not represent average replacement rates for workers in manufacturing, since the probability that an average worker will have accrued the quoted number of years of coverage is not equal in all the countries studied.

## Program Characteristics

### Austria

**Benefit formula.** The old-age benefit formula in Austria is based on average earnings in the 5 calendar years preceding retirement or earnings in the first 60 consecutive months of compulsory coverage after age 40, whichever is more advantageous—generally the former. Earnings are revalued for (indexed by) the change in national average earnings.

The amount of the benefit is also coverage-related. The basic pension is equal to 30 percent of the worker's average indexed earnings plus 0.5 percent of average earnings per year of coverage for each of the first 10 years, 0.9 percent for each of the next 10 years, 1.2 percent for each of the following 10 years, and 1.5 percent for each of the next 15 years. Thus, the old-age benefit replaces 57 percent of average earnings after 30 years of coverage, 64.5 percent after 35 years, and 72 percent after 40 years. A maximum of 79.5 percent of average earnings is granted after 45 years of coverage.

**Characteristics affecting the replacement rate.** The 5-year averaging period used to compute the earnings base affects the replacement rate in periods of wage acceleration or deceleration. When wages are accelerating, as in the period 1969–74, the replacement rate tends to diminish as current higher earnings are averaged with previous lower earnings before being set against the current higher earnings. When wages are decelerating, as in the post-1974 period, the replacement rate tends to increase as preretirement earnings remain more in line with the 5-year earnings average. Average wage increases in manufacturing grew from an annual rate of about 7 percent in the late 1960's to over 15 percent by the mid-1970's before subsiding to around 6 percent toward the end of the decade.

## Canada

**Benefit formula.** Income maintenance for the aged in Canada is primarily provided through two social security programs: a program providing a universal, flat-rate benefit at age 65, and one providing an earnings-related benefit. The universal benefit is payable after 40 years of residence and is adjusted four times yearly with changes in the consumer price index. The earnings-related benefit program, established in 1966, began to pay a full benefit in 1976 at the rate of 25 percent of average revalued covered earnings. Before 1976, a reduced benefit was awarded based on the number of years of coverage. Average annual earnings used to compute the earnings-related portion of the benefit are revalued in line with the change in average wages.

**Characteristics affecting the replacement rate.** During the phasing-in of the earnings-related benefit, the replacement rate grew considerably. In 1969, only three-tenths of the full earnings-related benefit was payable, but the proportion reached nine-tenths by 1975. This increase caused a 40-percent rise in the earnings replacement rate over this period. In 1976, after completion of the phase-in, however, the replacement rate began to level off. Eventually, it even fell slightly as average wages in manufacturing rose faster than the earnings-related and flat-rate benefits combined.

Because of the low earnings ceiling for contribution purposes for the earnings-related program, persons earning average wages in manufacturing did not have their full wages taxed after 1967. For these persons, therefore, a more rapid increase in the earnings ceiling vis-à-vis average manufacturing wages has partially offset the slower growth in price-indexed, flat-rate benefits since 1976. The universal benefit as a percentage of the total benefit for an individual earning average manufacturing wages fell from about 50 percent in 1975 to about 43 percent by 1980.

## Denmark

**Benefit formula.** Denmark has a two-tier social security benefit system—a universal, flat-rate old-age benefit based on residence that constitutes the bulk of the total social security benefit, and a modest employment-related old-age benefit. The universal program requires 40 years of residency for eligibility to the full benefit. Because of a shortened phase-in period, however, a full employment-related benefit will be payable after 27 years of coverage, in 1995. The employment-related program began in 1968; it will eventually require 40 years of coverage for the full benefit.

**Characteristics affecting the replacement rate.** Unlike the supplementary benefit programs in other Scandinavian countries, the employment-related benefit in Denmark is not related to the level of earnings but rather to the length of employment. As a result, persons covered for the same length of time receive benefits of the same amount, regardless of their earnings level.

The amount of the employment-related benefit is modest compared with the universal benefit and is not automatically adjusted to account for changes in prices or wages. Therefore, despite the shortened phase-in period, the increasing employment-related benefit has only managed to keep the total benefit at a constant level vis-à-vis average wages in manufacturing.

## France

**Benefit formula.** A full old-age pension is payable in France at age 60 with 37.5 years of insurance coverage. In 1980, a full benefit at age 60 was payable at the rate of 25 percent of the beneficiary's average annual revalued earnings in the 10 best years. For each year that retirement is postponed past age 60, an additional 5 percent of the earnings base was payable, up to a maximum of 75 percent of the base for someone retiring at age 70. The normal retirement age was considered to be 65, which implies a benefit equal to 50 percent of the earnings base at that age.

**Characteristics affecting the replacement rate.** The upward surge in the replacement rate from 1969 to 1975 is attributable to a change in the benefit formula. Before 1973, the last 10 years of revalued earnings were averaged to arrive at an earnings base. In 1973, a provision was introduced allowing the 10 years of highest revalued earnings since 1948 to be selected.

Before 1966, the factors used to revalue earnings were based on changes in average cash sickness payments; since then, they have been based on changes in the average contribution over the reference period. These factors have more than compensated for the yearly increase in average wages in manufacturing. The averaging of earlier wages revalued with an overcompensating factor produced a significant increase in the earnings base and a resultant higher benefit level. Volatility after 1975 has been caused by differences between increases in the earnings level (wages in manufacturing) and the adjustment factors used to revalue earnings.

## Federal Republic of Germany

**Benefit formula.** The West German social security old-age program provides benefits equal to 1.5 percent of the personal earnings base for each year of coverage. The maximum creditable coverage—50 years—would therefore provide a benefit of 75 percent. In table 1, however, 40 years of coverage has been assumed, producing a benefit equal to 60 percent of the personal earnings base. This base is computed by dividing the individual's earnings in each year by average covered earnings of all covered workers in that year, averaging the quotients, and multiplying the result by the general computation base. The figure is adjusted annually to reflect the change in average covered wages over two preceding 3-year averaging periods.

**Characteristics affecting the replacement rate.** The key to changes in the replacement rate is in the relationship of the general computation base to average wages in manufacturing. As wages accelerated in the period 1969-75, the computation base as a proportion of preretirement earnings decreased from 91 percent to 85 percent because of a time lag in the base formula for introducing current wage changes. Thereafter, wages decelerated, and, between 1975 and 1977, an increase in the general base of some 20 percent occurred while wages in manufacturing increased only about 15 percent. The replacement rate therefore began to rise. In July 1978, however, annual increases in the general base were limited to less than the level of actual wage increases for the ensuing 3 1/2 years. The result was a downward movement in replacement rates thereafter.

## Italy

**Benefit formula.** The social security old-age benefit for most wage earners in Italy is awarded at age 60 and is calculated on earnings and the number of covered years. For each year of coverage, 2 percent of the earnings base is awarded, up to a maximum of 80 percent after 40 years. The earnings base is the average of the best 3 years of earnings in the last 10 years.

**Characteristics affecting the replacement rate.** Because of the 3-year averaging period, acceleration or deceleration of wage increases have the same effect on the replacement rate in Italy as they do in Austria and West Germany. Wage acceleration leads to lower replacement rates and wage deceleration leads to higher replacement rates, other things being equal.

From 1969 to 1977, replacement rates remained relatively constant despite an increase in the proportion of the earnings base awarded per year of coverage, which rose from 1.625 percent in 1969 to 1.85 percent in 1975 and to 2 percent after 1975. This stability in the benefit level resulted because the increase in wage gains over this period was counterbalanced by the more generous benefit formula. The earnings base fell from 95 percent of preretirement earnings in 1969 to 82 percent in 1975 and to 73 percent in 1976.

## Japan

**Benefit formula.** The social security program that covers a majority of Japanese workers uses a two-part formula for determining the old-age benefit for retiring workers. Part one pays a variable amount based on length of coverage, and part two pays an earnings-related amount. To determine the coverage-related portion of the benefit, a base amount, which is adjusted annually for prices, is multiplied by the number of covered years up to 35. The annual earnings-related portion is calculated as 1 percent of average revalued earnings for each year, up to a maximum of 35 percent. In 1980, the coverage-related portion of the benefit accounted for almost 60 percent of the total benefit for a person who earned average wages in manufacturing.

**Characteristics affecting the replacement rate.** The relative weighting of the benefit formula's two components emphasizes length of coverage. Until 1977, it was not possible to have accrued the maximum number of covered years—35—since the retirement benefit program was introduced in 1941. Therefore, increases in replacement rates before 1977 are partially attributable to the gradual accrual of a full career's coverage. In addition, there have been ad hoc increases in benefit levels in line with increases in real wages. In 1973 and again in 1976, the price-adjusted base amount used in the coverage-related portion of the benefit computation was substantially increased. Revaluation of past earnings for changes in the consumer price index was introduced in 1973, giving a further boost to replacement rates between 1969 and 1975.

## The Netherlands

**Benefit formula.** Fifty years of coverage eventually will be required for eligibility to the flat-rate old-age benefit in the Netherlands. The benefit consists of 12 monthly payments plus a once-yearly vacation allowance equal to approximately 7 percent of the annual benefit. For each unexcused year of noncontribution, the benefit is reduced by 2 percent. However, no reduction is made for years of noncontribution before 1957, the year the program was introduced. The benefit level is revised every 6 months, and the single beneficiary's benefit is kept approximately equal to 70 percent of the net minimum wage.

**Characteristics affecting the replacement rate.** Replacement rates in the Netherlands have remained stable over the past 15 years. This has been due to the process for adjusting minimum wages, and thus old-age benefits, to keep them in line with increases in general wages.

## Sweden

**Benefit formula.** Old-age income maintenance protection in Sweden is provided by means of two programs—a univeral benefit program (available to all citizens and to certain resident aliens) and a supplementary program (based on earnings). The universal benefit is payable at a flat rate to all who qualify. (The amount paid under this program will be increased somewhat if the individual is *not* eligible for an earnings-related pension.) The supplementary benefit is computed at 60 percent of average revalued earnings above a price-indexed threshold (the base amount) and below 7 1/2 times that amount. Annual supplementary benefit "pension points" are acquired by dividing annual earnings by the base amount at the beginning of the year. Points from the best 15 years are then averaged and earnings are revalued by multiplying the average number of points per year by the base amount in force at the time of retirement. The base amount is adjusted every time the consumer price index increases by 3 percent or more.

Begun in 1960, the supplementary program eventually will require 30 years of coverage for eligibility to a full benefit. Transitional measures, however, allowed a full supplementary benefit to be paid in 1980 with coverage from 1960.

**Characteristics affecting the replacement rate.** During the transitional period, 1960–80, the supplementary benefit was phased in at the rate of one-twentieth of the full benefit year. Thus, in 1970, a retiree with coverage since 1960 was awarded ten-twentieths, or one-half, the full supplementary benefit. By 1980, twenty-twentieths of a full benefit became payable. The more than 50-percent increase in the total old-age benefit replacement rate between 1969 and 1980, shown in table 1, is attributable just to this phasing-in process. If the two components of the total benefit are considered separately, it can be seen that the universal benefit has actually risen more slowly than average wages in manufacturing, while the supplementary benefit has risen substantially faster. After the phasing-in had been completed in 1980, however, the annual increase in the total benefit followed the increase in the price-indexed base amount. Should the historical trend of real wage increases continue, a gradual decrease in the future replacement rates of old-age benefits will ensue.

## Switzerland

**Benefit formula.** The monthly old-age benefit in Switzerland, payable at age 65 for men and at age 62 for women, is calculated in two parts—a fixed amount equal to 80 percent of the minimum monthly benefit, and an earnings-related amount equal to 1.67 percent per year of revalued average annual wages. Since 1978, the minimum benefit has been adjusted (generally every 2 years) according to a mixed wage-price index. Factors for revaluing individual wage histories are derived from this wage-price index. Coverage since 1948 entitles an insured person to a full benefit at retirement age; the earnings-related portion of the benefit is reduced for shorter periods of contribution. The benefit is increased by 50 percent for a couple when the dependent wife is over age 62.

**Characteristics affecting the replacement rate.** Both the fixed and earnings-related portions of the benefit were increased substantially over the period 1969–75 through a series of ad hoc measures. Beginning in 1978, the increase in benefit levels slowed. In 1979, a new revaluation procedure was introduced that reduced benefit levels for new beneficiaries. By 1980, the mixed index (an average of the wage and price indexes) was fully implemented. Future increases in benefit levels should be lower than increases in average wages if the trend of real wage increases continues.

## United Kingdom

**Benefit formula.** The social security benefit structure in the United Kingdom has changed several times over the past 2 decades. Before 1960, a flat-rate old-age benefit was awarded at age 65 to men who satisfied the coverage requirements and to women who did so at age 60. Graduated contributions were then introduced and the old-age benefit began to include both a flat-rate amount and an amount based on total graduated contributions paid. The graduated contributions were discontinued in 1975, and in 1978 a new earnings-related benefit program was introduced. Thus, a new retiree after 1979 might have had his or her benefit calculated according to a three-tier structure: a flat-rate benefit, a benefit based on accrued graduated contributions, and an earnings-related benefit.

The earnings-related benefit is being phased in over a 20-year period at the rate of 1.25 percent of the wage base per year of coverage. When payable, the full earnings-related benefit will amount to 25 percent of the wage base, which is computed as the difference between the threshold amount (£ 19.5 a week in 1979) and the ceiling (approximately seven times the threshold). This benefit is revalued according to changes in average annual wage levels.

**Characteristics affecting the replacement rate.** In 1980, the flat-rate portion of the benefit still provided over 85 percent of the total benefit for a new retiree who had earned average wages in manufacturing. This proportion will gradually decrease as the earnings-related portion of the benefit matures and the replacement rate increases. Between 1969 and 1975, benefit levels increased as graduated contributions were accrued and a correspondingly larger benefit was awarded. When the graduated contribution program was discontinued in 1975, replacement rates began to fall. In 1978, however, graduated pensions began to be adjusted annually to reflect changes in price levels. Additionally, the earnings-related benefit program was introduced, and thereafter replacement rates increased accordingly.

## United States

**Benefit formula.** Under the U.S. program, 35 years of earnings eventually will be averaged to compute the benefit, payable in full at age 65. The total benefit is related to earnings; earnings used to compute each worker's benefit amount are indexed to reflect changes in average wages in covered employment. The benefit formula used to compute the amount initially payable is also adjusted annually to reflect changes in average wages; increases after entitlement are made annually as necessary to reflect increases in prices. The benefit is increased by 50 percent for a worker with a dependent spouse.

**Characteristics affecting the replacement rate.** Benefit amounts were increased by ad hoc adjustments in the benefit formula legislated every other year in the late 1960's. A large, immediate increase was legislated in 1972, when the benefit formula also was indexed to reflect increases in prices in future years. Because both wages and prices rose rapidly after 1972, replacement rates also rose rapidly—to historically high levels. This increase was much greater than the offsetting effect of the gradual lengthening of the averaging period. Legislation was enacted in 1977 to change indexation of the benefit formula from prices to wages; it is just becoming effective for workers turning age 65 in 1982. The 1977 legislation was intended to stabilize future replacement rates at a somewhat lower level than those that had been in effect since the mid-1970's.

# Retirement Options Under the Swedish National Pension System

by Michael D. Packard*

This article reviews the retirement options available to Swedes aged 60 to 64 under their national pension system. Summaries of the various options are followed by an analysis of the relative attractiveness of each option using hypothetical 60-year-old workers with varying characteristics. The proportion of 60- to 64-year-old Swedes selecting each option corresponds closely to the relative attractiveness orderings computed for these hypothetical workers. Sweden has a unique pension alternative called the partial pension program that allows workers aged 60–64 to reduce their hours of work to within prescribed limits and receive a pension equal to half the earnings they lost. The Swedish experience with this popular pension is described in some detail.

The development of the Swedish national pension system has created an unusually large number of benefit receipt possibilities for those aged 60–69. The system offers the options of claiming full retirement benefits at age 65, claiming reduced benefits at age 60, or claiming actuarially increased benefits if receipt is delayed past age 65. In addition, half the benefit may be claimed at one age and the other half at another age—with each half adjusted independently to reflect the age at which it was first drawn. Since 1976, the Swedish national pension system has had a unique program that allows qualified workers aged 60–64 to draw partial pensions if they reduce their working hours to within prescribed limits. Sweden also offers invalidity pensions, which are similar in size to age-65 retirement pensions, to all workers under age 65 who are permanently disabled and to nondisabled workers aged 60–64 who have experienced prolonged periods of unemployment.

This article reviews the Swedish program and analyzes the relative attractiveness of its various retirement options. The first section describes the major features of the Swedish system. The second briefly reviews the various pension benefit receipt alternatives a Swedish worker faces. The third focuses on the relative attractiveness of these alternatives for hypothetical workers with selected characteristics. The Swedish experience with the partial pension program is detailed in the fourth section and is followed by a summary.

## Principal Features

The Swedish national pension system is a two-tiered social security program that consists of a basic pension, or "demogrant," and a supplementary, earnings-related pension. Benefit levels for both are tied to a common "base amount."[1] The base amount for 1982 is 17,800 kronor, or about $3,080; it is adjusted annually by a special price index.[2]

### The Demogrant

The demogrant is payable to all qualifying Swedish citizens domiciled in Sweden regardless of the level of their previous earnings.[3] The demogrant available to an individual aged 65 or older is 95 percent of the base amount and that available to each member of an aged couple is 77.5 percent. In 1982, the demogrants were approximately $2,925 for an individual and $4,775 for an aged couple ($2,387 each). The demogrant is increased for individuals or couples who do not also qualify for an earnings-related pension.

The author wishes to acknowledge the contribution of Leif Haanes-Olsen, Comparative Studies Staff, whose knowledge of the Swedish pension system and whose advice and comments were extremely helpful in preparing this article. Virginia Reno and Melinda Upp of the Program Analysis Staff also provided useful comments.

[1] The base amount was set by legislation at 4,000 kronor as of September 1957. Until October 1980, the base amount was adjusted monthly if the Swedish general price index increased by at least 3 percentage points. In early 1981, indirect taxes and changes in the price of energy were removed from the general price index. In December 1981, Parliament voted to change the base amount only once a year. Both the change in the price index and the move to adjust the base amount only once a year were undertaken to slow the rate of pension growth.

[2] One krona = $0.17 (May 1982).

[3] Under certain circumstances, Swedish citizens not domiciled in Sweden and foreign nationals can qualify for the demogrant.

## Earnings-Related Pension

The earnings-related pension is designed to provide a worker with an old-age pension of about 60 percent of his or her former earnings above the base amount. The size of this pension is based on a worker's pension points which, in turn, are based on pensionable earnings—that is, earnings in excess of the base amount up to 7.5 times the base amount. Consequently, in 1982, only earnings between about $3,080 and $23,100 are counted as pensionable earnings. Pension points are calculated each year by dividing the base amount for the year into the worker's pensionable earnings for the year. For example, suppose a worker earns $15,000 in 1982. The pensionable income for that year will be $11,920 ($15,000 − $3,080), since earnings below the base amount are not counted as pensionable earnings. The worker is thus credited with 3.87 pension points for 1982 ($11,920 ÷ $3,080 = 3.87).

To determine the level of a worker's earnings-related benefit, the pension points for the highest 15 years are averaged. This average is then multiplied by 60 percent of the base amount established for the year in which the worker claims benefits. The result is the earnings-related pension. For example, assume a retiree's average pension points for the 15 years with highest pension points is 4.0. The earnings-related pension in 1982 would be about $7,400. This pension is computed by multiplying 4.0 (average pension points) times 0.6 times $3,080 (the base amount for 1982).

To receive any earnings-related pension, an individual must have at least 3 years with pension points. To receive the "full" earnings-related pension, the individual must have had pensionable earnings for at least 30 years (exceptions are made for those born before 1924). The earnings-related pension is reduced by 1/30 for each year short of 30 years. For example, if the worker's full earnings-related pension was $7,500, but the worker had only 25 years with pensionable earnings, the earnings-related pension would be reduced to $6,250, a $250 or 1/30 reduction for each of the 5 years short of the 30-year requirement.

## Financing

The Swedish national pension system is much more expensive than the comparable Social Security program in the United States. The Swedish demogrant and earnings-related pension are financed chiefly by employer contributions of 8.45 percent and 9.40 percent of total payroll, respectively (1982 rates). The demogrant is supplemented by government appropriations equal to about 3 percent of total payroll. There are no employee contributions to either the demogrant or the earnings-related pension. Thus, the total cost of the demogrant and earnings-related pension is about 21 percent of payroll. By comparison, the total cost of the U.S. Old-Age, Survivors, and Disability Insurance (OASDI) program in 1982 is about 10.8 percent of taxable payroll. Moreover, in Sweden all earnings in employment covered by the national pension system are subjected to the payroll tax, whereas in the United States, only earnings in covered employment up to $32,400 (which amounts to about 91 percent of all covered earnings) are taxed. Thus, in terms of total payroll, the Swedish system costs just over twice as much as the U.S. program.

The Swedish demogrant is financed on a pay-as-you-go basis—program revenues are paid out almost immediately as benefits. The earnings-related pension, on the other hand, is partially funded—not all current revenues are paid out as current benefits. What is not paid out is invested but it could be used in the event that benefits exceed revenues. At current contribution rates, it has been estimated that revenues will equal earnings-related pension payments in 1985. After that, current revenues will no longer be sufficient to pay current benefits, and the reserves now being accumulated will gradually be drawn down. This process will continue until, under current estimates, the fund will be exhausted by the year 2005.[4]

The Swedish national pension system, which provides old-age, survivors', and invalidity pensions, is only one part of the Swedish social security system. The system also includes a national health insurance scheme, workers' compensation, unemployment insurance, and family allowances. The costs of these other components is also borne by employer contributions as follows:

| Component | Percent of total payroll |
|---|---|
| Partial pensions | 0.5 |
| National health insurance | 10.5 |
| Workers' compensation | .6 |
| Labor-market (unemployment) insurance | .8 |
| Public child care | 2.2 |
| Other social security contributions | 1.405 |

---

[4] Estimates are from Tor E. Eriksen, "Some reflections on the role of the National Supplementary Pension Scheme in the Swedish pension system," **International Social Security Review**, Vol. 4, 1981, pages 410–426.

Thus, in 1982, employers in Sweden made contributions equal to 33.055 percent of their total payroll to the Swedish social security system.[5] These rates are adjusted, usually upward, about once a year.[6]

## Pension Alternatives

The Swedish national pension system allows an individual to begin drawing benefits at any age between 60 and 69. Table 1 outlines the work and age limitations and benefit adjustments for the major pension alternatives. These alternatives are normal pension receipt, delayed receipt, early receipt, split receipt, invalidity or disability receipt, and partial pensions.

### Normal Pension Receipt

The normal retirement age in Sweden, as in the United States, is 65. At this age, an individual or couple is entitled to receive both the demogrant and earnings-related pension. No dependent benefits are paid under either the demogrant or the earnings-related pension program. Survivor benefits are paid under both programs, however.

Unlike U.S. Social Security, the Swedish system has no earnings test (or retirement test) as a condition for receipt of either the demogrant or the earnings-related pension. Thus, a worker can claim a full pension at age 65 and continue regular employment. All pensions paid by the Swedish social security system are subject to the Swedish income tax. This policy also differs from the treatment of U.S. Social Security benefits.

### Delayed Pension Receipt

Deferring pension receipt past age 65 results in a benefit increase of 0.6 percent for every month (7.2 percent for every year) of deferment up to age 70. There is no further increase if benefits are deferred past that age. Thus, at age 70, the pension is increased by 36 percent. Both the demogrant and the earnings-related pension are increased by delaying benefit receipt.

Pension points are computed only on earnings between ages 16 and 64. Earnings at or after age 65 cannot be used to increase the earnings-related pension. The incentive to work past age 65 caused by the delayed retirement credit may be offset because the earnings-related pension is not adjusted for earnings after that age.

The absence of an earnings test might be expected to encourage Swedes to work after age 65, but relatively few do. The labor-force participation rate among all persons aged 65-74 in Sweden was only 8.6 percent in 1980 (about half the rate for such persons in the United

**Table 1.**—Some characteristics of pension receipt alternatives available to Swedish workers aged 60-69

| Alternative | Work limitations | Age limitations | Benefit size before age 65 | Benefit size at and after age 65 |
|---|---|---|---|---|
| Normal Pension Receipt........ | None | 65 | ... | Age-65 benefit. |
| Delayed Pension Receipt ....... | None | 65-69 | ... | Age-65 benefit increased by 0.6 percent for each month receipt is delayed past age 65. |
| Early Pension Receipt ......... | None | 60-64 | Age 65 benefit reduced 0.5 percent for each month receipt is taken before age 65. The individual can take all the reduced benefit or half the reduced benefit. | Same as benefit taken before age 65 if the entire benefit is received before age 65. If only half the benefit was taken before age 65, the post-age-65 benefit equals the reduced benefit taken before age 65 plus the unreduced (or increased) benefit for the half pension taken at (or delayed past) age 65. |
| Disability Pension Receipt ...... | Must be at least 50 percent disabled (physically or mentally) or must be unemployed and have exhausted unemployment compensation. | 60-64 (Disability pensions convert to normal retirement pensions at age 65). | A. Depends on degree of disability (either 1, 2/3, or 1/2 times age-65 benefit).<br>B. Full age-65 benefit if unemployable. | Age-65 benefit. |
| Partial Pension Receipt ........ | Must reduce work effort by at least 5 hours per week on average, but must work an average of at least 17 hours per week. | 60-64 | 50 percent of earnings lost because of reduction in hours worked. | Age-65 benefit. |

---

[5] The vast majority of Swedish employees are unionized, and national collective bargaining agreements impose additional payroll contributions on employers for severance pay, sick pay, supplemental pensions, group life insurance, and no-fault liability insurance. In 1982, premiums for these coverages totaled an additional 5.6 percent of gross payroll for blue-collar workers and an additional 10 percent, on average, of the gross payroll of salary workers.

[6] Employers recently received some marginal relief, however. Effective January 1, 1982, no contributions are made on the earnings of employees aged 65 or older as of the previous January 1st. Before 1982, the age-65 limit was applicable only for contributions to the earnings-related pension plan.

States). The relatively generous benefits in Sweden could, in part, explain this low labor-force participaton rate.

### Early Pension Receipt

Swedes may elect to receive actuarially reduced pension benefits before age 65. Both the demogrant and the earnings-related pension may be taken as early as age 60. Both are reduced by 0.5 percent for each month they are received before age 65. Thus, at age 60, the reduction is 30 percent. The actuarial reduction is permanent.

### Split Pension Receipt

In the Swedish system, an individual can choose to receive only half the pension at the reduced rate. If the individual delays receipt of the other half until age 65, that portion will not be reduced. For example, an individual who would be eligible for a combined demogrant and earnings-related pension of $10,000 per year at age 65 could accept a reduced pension of $7,000 per year at age 60. Alternatively, the same individual could accept half the reduced pension ($3,500) at age 60 and wait until age 65 to receive the other half at its unreduced level ($5,000). After age 65, then, the individual would receive a pension of $8,500 per year.

Because pension eligibility is not qualified by an earnings test, an individual aged 60-64 can elect to continue to work while drawing a half pension. Earnings above the base amount are still considered as pensionable income and may contribute to higher earnings-related benefits on the half pension not claimed early. Deferring acceptance of the other half of the pension past age 65 will result in an actuarial increase on this half of 0.6 percent per month of delay. Such a delay will result eventually in an actuarial increase equal in size to the actuarial decrease in the half pension accepted early. Thus, the individual can receive an unreduced pension from about age 69 on, even though some actuarially reduced benefits were taken as early as age 60.

### Disability Pension Receipt

A disability (invalidity) pension is payable to any insured person aged 16-64 who is at least 50 percent disabled and whose disability is regarded as permanent.[7] The size of the disability pension benefit varies from 50 percent to 100 percent of the full retirement benefit depending upon the degree of disablement. The eligibility requirements were relaxed somewhat in the early 1970's to allow the payment of a full disability pension to certain workers aged 60-64 who either were unable to cope with their work environment or had experienced prolonged periods of unemployment. Unemployed insured persons aged 60-64 are eligible for the disability pension if they have exhausted their compensation from an approved unemployment insurance fund and are judged to have no real prospects of finding work. In these cases, the full disability pension is awarded without regard to medical condition. Approximately 35 percent of all Swedish disability benefits are paid to persons aged 60-64.

### Partial Pension Receipt

Partial pension benefits are available to wage and salary workers meeting the following conditions: They must be aged 60-64, must have been employed for at least 5 of the 12 months preceding application for the partial pension, and must have had pensionable earnings for at least 10 years from age 45. The workers' employers must agree to let them work part time and the workers must agree to reduce their hours of work by an average of at least 5 hours per week while maintaining an average of at least 17 hours work per week. The self-employed must reduce their hours of work by at least 50 percent but maintain an average work week of at least 17 hours. (The normal full-time work week in Sweden is 40 hours.)

Persons who meet the above requirements are entitled to claim partial pension benefits. Once they claim these benefits, they cannot apply for or receive either the demogrant or the earnings-related old-age benefit until age 65. Neither of the latter pensions is reduced by the acceptance of the partial retirement pension. Moreover, the partial pension itself can be considered pensionable earnings and can be used to build up points under the earnings-related pension.

The partial pension replaces 50 percent of the income loss sustained when a wage or salary worker transfers to part-time work. Special benefit payment rules for the self-employed result in their average benefits being only about 75 percent as large as the average benefits of partially retired employed persons.

Partial pension benefits, like the earnings-related benefits, are based only on earnings up to 7.5 times the base amount. For example, if a worker initially had earnings in 1982 of $25,000 ($1,900 above 7.5 times the base amount) and reduced work effort and earnings by half, the worker would receive a partial pension of only $5,300 (0.5 times ($23,100 − $12,500)) not $6,250, because earnings above 7.5 times the base amount are ignored by the partial pension system.

---

[7] To receive a disability pension, the disabled Swede must have had pension points in 2 of the preceding 4 years. Insured persons considered to have been engaged in a gainful occupation at the time of becoming disabled are credited with "assumed pension points" for the year the disability occurred up to, and including, the year during which they reach age 65. The number of the pension points accredited is the higher of the average pension points for the 4 years preceding the disability or the average for all years since age 16. Disability benefits are payable until death, recovery, or attainment of age 65, when they are replaced by old-age pensions.

## Examples of Options for Workers Aged 60-64

The Swedish worker aged 60-64 has a variety of pension options involving different combinations of employment, earnings, and benefit receipt. It is not a simple matter to determine which options the worker finds relatively the most attractive. To gain an appreciation for the relative attractiveness of the alternatives, this section employs several measures of attractiveness to determine the preference of hypothetical workers with selected characteristics.

### Hypothetical Average-Wage Earner

To facilitate a comparison among the various options, a series of calculations for a hypothetical 60-year-old worker have been made using a set of simplifying assumptions: (1) The base amount is constant at $3,000; (2) the worker, aged 60, earns $12,000 per year or $6.00 per hour based on a 2,000-hour work year;[8] (3) the worker has an average of 3.0 pension points; (4) the worker will live until age 80;[9] and (5) wages and prices are constant over time. Under these assumptions, the worker's full pension is $8,250 ($2,850 from the demogrant (0.95 times the base amount) and $5,400 from the earnings-related pension (0.6 times the average pension points times the base amount)). This total pension represents 69 percent of the worker's full-time earnings of $12,000.

The hypothetical worker is assumed to have the following six pension-work options:

- **Normal Retirement.** Continue working until age 65; retire with full pension
- **Early Retirement.** Retire at age 60 with reduced pension (70 percent of the Normal Retirement pension)
- **Work with Half Pension.** Receive Early Retirement pension at age 60 (70 percent of half the full pension) and continue working full time until age 65. At age 65, receive the other half of the pension unreduced. Before age 65, the pension is 35 percent of the Normal Retirement pension; at age 65, it is 85 percent
- **Partial Pension-35.** Work 35 hours per week (instead of 40) at age 60 and receive pension to replace half of the lost earnings. Retire at age 65 with Normal Retirement pension
- **Partial Pension-20.** Same as above except reduce the number of hours worked to 20
- **Disability.** Be fully disabled or unemployed with no more benefits available from unemployment compensation; receive Normal Retirement pension at age 60

**Replacement rates.** Table 2 shows the worker's replacement rate at age 60 and age 65 under each option. The replacement rate is computed as the sum of the worker's pension plus earnings after age 60, divided by full-time earnings of $12,000. The replacement rate between ages 60 and 64 for this worker varies from 48 percent for the Early Retirement option to 124 percent for the Work with Half Pension option. For all options except Disability and Early Retirement, the individual is

**Table 2.**—Hours worked, earnings replacement rates, income from age 60, and relative cost of leisure under various pension receipt alternatives for hypothetical worker with average earnings[1]

| Pension option [2] | Replacement rate | | Hours worked between ages 60 and 65 | Case 1—worker lives to age 80; 3 percent discount rate | | Case 2—worker lives to age 85; 3 percent discount rate | | Case 3—worker lives to age 80; 0 percent discount rate | |
|---|---|---|---|---|---|---|---|---|---|
| | At age 60 | At age 65 | | Income from age 60 | Cost of leisure | Income from age 60 | Cost of leisure | Income from age 60 | Cost of leisure |
| Normal Retirement | 1.000 | 0.688 | 10,000 | $144,110 | ... | $165,657 | (3) | $183,750 | (3) |
| Early Retirement | .481 | .481 | 0 | 88,495 | $5.61 | 103,578 | $6.21 | 115,500 | $6.83 |
| Work with Half Pension | 1.241 | .584 | 10,000 | 144,605 | (3) | 162,920 | ... | 179,625 | ... |
| Partial Pension-35 | .938 | .688 | 8,750 | 140,573 | 3.23 | 162,120 | 2.83 | 180,000 | 3.00 |
| Partial Pension-20 | .750 | .688 | 5,000 | 129,959 | 2.93 | 151,506 | 2.83 | 168,750 | 3.00 |
| Disability | .688 | .688 | 0 | 126,421 | 1.82 | 147,968 | 1.77 | 165,000 | 1.88 |

[1] Assumptions: The worker's wage rate is $6.00 per hour or $12,000 per year. Worker has an average of 3 pension points and has at least 30 years with pension points; wages and prices are constant over time; and the base amount is $3,000.

[2] Normal Retirement: The worker retires at age 65.

Early Retirement: The worker retires at age 60 and his or her pension is permanently reduced by 30 percent.

Work with Half Pension: The worker takes a reduced pension equal to 35 percent of Normal Retirement pension and continues to work to age 65. After retirement, pension equals 85 percent of Normal Retirement pension.

Partial Pension-35: The worker reduces labor supply to 35 hours per week and receives a pension equal to half the lost earnings. At age 65 the worker retires and draws Normal Retirement pension.

Partial Pension-20: The worker reduces labor supply to 20 hours per week and receives a pension equal to half the lost earnings. At age 65 the worker retires and draws Normal Retirement pension.

Disability: The worker is unable to work and receives Normal Retirement pension at age 60.

[3] Cost of leisure computed relative to this pension option. Cost of leisure is computed by dividing the difference in income from age 60 by the difference in hours worked between ages 60 and 65.

---

[8] $6.00 per hour was roughly equivalent to the average wage rate in Sweden, 1979.

[9] In 1980, the Swedish life expectancy at age 65 was 14.3 years for men and 17.9 years for women.

assumed to work until age 65 and then retire completely. When work continues past age 60, the replacement rates fall at age 65. At age 65, the Early Retirement option still has the lowest replacement rate—48 percent. The rate for the Work with Half Pension option falls to 58 percent. For the other four options, the replacement rate is 69 percent.

**Lifetime income after age 60.** The replacement rate is a common measure of the adequacy and attractiveness of the benefits available under alternative pension schemes. The rate is not a good device for measuring the relative attractiveness of options that have benefits beginning at different points in time because it does not take into consideration how long the rate will remain in effect. For example, if one looks at the age-60 replacement rates in table 2, one would conclude that Work with Half Pension is the best option. At age 65, however, four other options have higher replacement rates.

This shortcoming in the replacement rate measure can be overcome by focusing instead on comparisons of the expected value at age 60 of the worker's total lifetime income under each of the options. This measure is the discounted total income (earnings plus pensions) the hypothetical worker will receive from age 60 until death.[10] Case 1 in table 2 (the average-worker case) assumes that the worker will live to age 80 and that the discount rate is 3 percent—that is, $100 a year from now is worth $97 today. Discounted lifetime income under the various alternatives varies from $88,000 for Early Retirement to $145,000 for Work with Half Pension. Under this measure of relative attractiveness, Work with Half Pension is the most preferred alternative. The Normal Retirement option ranks a close second.

The discounted total income from age 60 until death measure is sensitive, however, to assumptions about the individual's life expectancy and the discount rate. Case 2 in table 2 (the long-lived worker case) addresses this sensitivity by assuming the hypothetical worker will live until age 85. The discounted total incomes for all alternatives are higher in this case because the worker is receiving pensions for an extra 5 years. The increase is less for Early Retirement and Work with Half Pension than for the other four alternatives since the size of the yearly pension benefit after age 65 is less for those two options. Increasing the life expectancy causes the Normal Retirement option to have the largest discounted total income from age 60 ($166,000). Work with Half Pension (at $163,000) is the second preferred option, and the Partial Pension-35 option (at $162,000) is the third choice.

In case 3 (the 0-percent discount case), the worker is assumed to live to age 80 and to have a 0-percent discount rate—that is, no preference for current over future income ($100 one year or ten years from now is valued the same as $100 today). Lowering the discount rate increases the relative attractiveness of those options offering the highest benefits after age 65. As in the long-lived worker case, the total income for Normal Retirement ($184,000) is greater than that for Work with Half Pension ($179,000), the option with the highest total income in the average-worker case. In the 0-percent discount rate case, the Partial Pension-35 option also has a higher total income from age 60 ($180,000) than does the Work with Half Pension option.

**Cost of leisure.** Cases 2 and 3 show that modest changes in assumptions about life expectancy or the discount rate can change the pension options with the highest income from age 60. Given the construction of income from age 60, either of the two full-time work options—Normal Retirement or Work with Half Pension—will always have more income from age 60 than the other options if the wage rate is not falling.

Not all Swedes work full time between age 60 and 65, and this fact dramatizes a shortcoming in the use of income from age 60 as a measure of the relative attractiveness of the six pension alternatives: Income from the age-60 measure does not take the worker's preference for leisure into account. It is generally assumed that, other things being equal, an individual is likely to prefer not working to working. Thus, many workers may find that options involving substantially less work and somewhat lower lifetime incomes are preferable to those involving more work and higher lifetime incomes.

To quantify the relationship between lifetime income and hours of work from age 60 under each option, a calculation of the average cost per hour of additional leisure is made for each of the options involving less than 10,000 hours of work between the ages of 60 and 65. The average cost of leisure is computed by dividing the difference in total income from age 60 between the highest-income option and a more-leisure option by the increase in leisure hours given by that more-leisure option.[11, 12]

---

[10] The discount rate is used to find the present value of money that is to be available at some time in the future. In a simple sense, a discount rate is the opposite of an interest rate. If a worker has $1 now and invests it at an annual interest rate of 5 percent, next year the worker will have $1.05. Likewise, if the discount rate is 5 percent, then $1.05 next year is only worth $1 today.

[11] In a static sense, the cost of leisure to the worker is equal to the wage rate, in this case $6.00 per hour. For each extra hour of work given up, the individual immediately loses one hour of wages. If the worker has a nonzero discount rate, then when the extra hour of leisure is taken, it will affect its value at age 60. Also, if the extra leisure affects the size of the pension, either in the period the leisure is taken or in a later period, then the marginal value of that leisure can be expected to deviate from the $6.00 per hour figure. The computed cost of leisure, then, can be viewed as a net wage rate.

[12] In the strictest sense, it is the marginal cost of leisure, not the average cost of leisure, that affects the worker's decision of how much leisure to "consume." Economic theory tell us that the more leisure a person consumes, the less that person will value an additional unit. The person will consume leisure until its marginal value is equal to its marginal cost. Since the worker's indifference curves are unknown, the marginal value of leisure at any point is unknown. Therefore, it adds little to compute the marginal cost of leisure for the different alternatives. By computing the average cost of leisure, it is stressed that there is a leisure-income tradeoff facing the worker.

For example, in case 1 of table 2, the Work with Half Pension option provides the highest expected income after age 60 ($144,605) but also involves full-time work (10,000 hours) between ages 60 and 65. The Partial Pension-20 option, in contrast, provides lower lifetime income ($129,959) but involves 5,000 more hours of leisure between ages 60 and 65. The average cost per hour of additional leisure under the latter option is measured as the decrease in income divided by the increase in leisure: ($145,605 − $129,959) ÷ 5,000 hours = $2.93 per hour. Thus, for this hypothetical worker whose wage rate is $6.00 per hour, the additional hours of leisure under the Partial Pension-20 option cost only $2.93 per hour relative to the pension option that yields the highest lifetime income after age 60. The $2.93 per hour is the worker's net wage, the average amount of money the worker gives up over the remainder of his or her life for each additional hour of leisure.

Table 2 gives the cost of leisure for the hypothetical worker under the three sets of assumptions about his or her life expectancy and the discount rate. The Disability alternative always has the lowest average cost of leisure for these three cases. This option is expected to be the low-cost option because the Disability pension is designed for those who are considered unable to work.

The option with the next lowest cost of leisure is Partial Pension-20. The hourly costs under this alternative vary from $2.83 for case 2 to $3.00 for case 3, or from 47 percent to 50 percent of the worker's wage rate of $6.00 per hour. The costs of leisure under this option are low enough that Partial Pension-20 may be an economically attractive alternative to working full time. The worker must satisfy certain labor-force attachment criteria, however, to be eligible for the Partial Pension option.

When Normal Retirement is the high-income alternative, the cost of leisure for both Partial Pension options will be identical. Since the size of the pension after age 65 is the same for the Partial Pension options and the Normal Retirement option, the difference in total income between these choices will be proportional to the differences in hours of work between the ages of 60 and 65. When Work with Half Pension is the high-income option, the costs of leisure for the two Partial Pension alternatives differ, primarily because Work with Half Pension provides a lower pension benefit after age 65 so that differences in total income levels are not proportional to differences in hours worked.

If the worker is not eligible for either the Disability or the Partial Pension option, the individual can increase hours of leisure by selecting Early Retirement. The cost of leisure is very high under this alternative, so unless the worker has an extremely high preference for leisure, he or she will probably not select Early Retirement.

## Other Hypothetical Workers

The examples so far have been for an average wage earner with steady earnings. The method of calculating pension benefits in Sweden provides an incentive for some workers with nonsteady earnings histories to work beyond age 60. Table 3 explores the same six pension-receipt options for three other hypothetical workers—a short-service worker, a worker whose earnings have been rising over time, and a worker whose earnings fall after age 60—to see if the relative attractiveness of the six options to these workers differs from that found for the average earner in case 1. In all three of these cases,

**Table 3.**—Income from age 60, relative cost of leisure, and earnings replacement rates under various pension receipt alternatives for a hypothetical worker[1]

| Pension option [2] and number of hours worked between ages 60 and 65 | Replacement rate | | Income from age 60 | Cost of leisure |
|---|---|---|---|---|
| | At age 60 | At age 65 | | |
| | Case 1—wage rate is $6.00 per hour; 3 pension point average; 30 years with pension points | | | |
| Normal Retirement; 10,000 | 1.000 | 0.688 | $144,110 | ... |
| Early Retirement; 0 | .481 | .481 | 88,495 | $5.61 |
| Work with Half Pension; 10,000 | 1.241 | .584 | 144,605 | (3) |
| Partial Pension-35; 8,750 | .938 | .688 | 140,573 | 3.23 |
| Partial Pe[illegible]-20; 5,000 | .750 | .688 | 129,959 | 2.93 |
| Disability, [illegible] | .688 | .688 | 126,421 | 1.82 |
| | Case 4—wage rate is $6.00 per hour; 3 pension point average; 20 years with pension points | | | |
| Normal Retirement; 10,000 | 1.000 | 0.573 | $129,526 | (3) |
| Early Retirement; 0 | .321 | .321 | 58,997 | $7.05 |
| Work with Half Pension; 10,000 | 1.160 | .447 | 122,564 | ... |
| Partial Pension-35; 8,750 | .938 | .573 | 125,988 | 2.83 |
| Partial Pension-20; 5,000 | .750 | .573 | 115,375 | 2.83 |
| Disability; 0 | .458 | .458 | 84,281 | 4.52 |
| | Case 5—wage rate is $11.25 per hour; 5 pension point average at age 60; 30 years with pension points | | | |
| Normal Retirement; 10,000 | 1.000 | 0.593 | $247,734 | (3) |
| Early Retirement; 0 | .369 | .369 | 127,111 | $12.06 |
| Work with Half Pension; 10,000 | 1.184 | .481 | 240,490 | ... |
| Partial Pension-35; 8,750 | .938 | .581 | 238,118 | 7.69 |
| Partial Pension-20; 5,000 | .750 | .543 | 209,268 | 7.69 |
| Disability; 0 | .527 | .527 | 181,587 | 6.61 |
| | Case 6—wage rate is $5.00 per hour; 3 pension point average at age 60; 30 years with pension points | | | |
| Normal Retirement; 10,000 | 1.000 | 0.825 | $128,222 | (3) |
| Early Retirement; 0 | .578 | .578 | 88,495 | $3.97 |
| Work with Half Pension; 10,000 | 1.289 | .713 | 126,854 | ... |
| Partial Pension-35; 8,750 | .938 | .825 | 125,678 | 2.04 |
| Partial Pension-20; 5,000 | .750 | .825 | 118,043 | 2.04 |
| Disability; 0 | .825 | .825 | 126,421 | .18 |

[1] Assumptions: The worker has a 3-percent discount rate and will live to age 80; wages and prices are constant over time; and the base amount is $3,000.

[2] See table 2, footnote 2, for definitions of pension options.

[3] Cost of leisure computed relative to this pension option. Cost of leisure is computed by dividing the difference in income from age 60 by the difference in hours worked between ages 60 and 65.

the worker is assumed to live to age 80 and to have a discount rate of 3 percent, the same assumptions made for the average-worker case.

**Short-service worker with average earnings.** In case 4, it is assumed that the worker has only 20 years with pension points.[13] Recall that under the Swedish pension system, the earnings-related pension benefits are reduced 1/30 for each year that the number of years with pension points falls short of 30 years. Thus, in case 4 the worker's earnings-related pension will be reduced by 1/3 (from $5,400 to $3,600) if the individual stops working at age 60. If the individual works an additional 5 years and earns pension points in each year, the earnings-related pension will be increased by 25 percent (from $3,600 to $4,500).

The replacement rates for a short-service worker tend to be smaller than those for the average steady worker in case 1 because the short-service worker's pension benefits are smaller. Income from age 60 is also smaller for the same reason. The high income alternative for this short-service worker is the Normal Retirement option. This result is different from case 1's high-income alternative (Work with Half Pension) because working full time between ages 60 and 65 increases the entire post-age-65 pension benefit for the worker choosing Normal Retirement but only a portion of the post-age-65 pension benefit for those who choose the Work with Half Pension option.

The cost of leisure for those options involving no work between ages 60 and 65 (Early Retirement and Disability) is very high for the short-service worker because the individual forgoes not only earnings over this period but also any increase in pension benefits that would accrue from the additional 5 years work. The low cost of leisure options are the two Partial Pension alternatives. Leisure costs less under these options than under the Disability option (for low-cost option for the steady worker) because working under either Partial Pension option increases the size of the benefit available at age 65. Since the individual does not work at all under the Disability option, the benefits for this option remain constant until the individual dies.[14]

**A worker with rising earnings.** Case 5 shows a worker whose earnings have been growing steadily over time (at 0.2 percent of the base amount each year) and whose earnings have just reached 7.5 times the base amount. This worker has an average of 5.0 pension points at age 60. Since the individual can earn up to 6.5 pension points for each year worked between age 60 and 65, the individual can raise average pension points (and thereby increase the pension at age 65) by working. Unlike the short-service worker, the size of the pension at age 65 will depend on how many hours were worked between ages 60 and 65.

The replacement rates for the worker with rising earnings tend to be smaller than those for the worker with steady earnings because the individual's earnings at age 60 are higher than average lifetime earnings, and a portion of the individual's pension is related to an average earnings measure. The replacement rates for Normal Retirement, the two Partial Pension, and the Disability options now differ at age 65, reflecting differences in earnings under these options between ages 60 and 65.

The lifetime income from age 60 is greater under each option for the worker with rising earnings than for the worker with steady earnings because both the wage-rate and pension-benefit levels are greater for the former. The Disability option has the lowest cost of leisure for this worker as it did for the steady earnings worker. This cost is almost 60 percent of the wage rate, however, whereas it was only about 30 percent of the wage rate for the steady worker in case 1. The costs of leisure for the other three more-leisure options are also higher, relative to the wage rate, for the worker with rising earnings. These higher costs of leisure imply that this person will be more likely to work past age 60 than will a person with steady earnings.

**A worker with falling earnings.** Case 6 in table 3 shows a worker whose wage rate has fallen to $5.00 per hour at age 60 where it will remain until the individual retires. The worker is assumed to have earned an average of 3.0 pension points in the 15 highest earning years. Like the worker with steady earnings and unlike the short-service worker and the worker with rising earnings, the pension level of this worker will not be affected by the amount the individual works between ages 60 and 65.

The replacement rates for the worker with falling earnings are higher than those for the worker with steady earnings since the end-of-working-life earnings are below the individual's average earnings. Since the individual's wage rate is lower, the income from age 60 is lower under all options involving work than was the case for the average worker with steady earnings. The incomes from age 60 for the individual's no-work options are the same, however. In this example, as in most other examples studied, the high-income option is Normal Retirement. The falling wage rate for this worker has increased the income from age 60 of all other options relative to the high-income option. As a result, the costs of leisure for the more-leisure alternatives are a relatively lower portion of the wage rate for this falling-earnings worker than they were for the average worker with steady earnings in case 1. The average cost of leisure for the Disability option is only 18 cents per hour.

---

[13] This example assumes a mature earnings-related pension system, an event that will not occur until 1990. In 1982, a retiree needs only 22 years with pension points to receive a full earnings-related pension.

[14] The Disability option is only available to those who face rather severe constraints on their ability to supply labor to the marketplace; those receiving a Disability pension do not make this choice from a set of unconstrained alternatives.

This fact implies that older Swedish workers facing a reduction in their wage rates may have an incentive to become, and remain, unemployed in order to qualify for Disability benefits under the long-term unemployment provision. The Swedish government has found no evidence that workers are using such a strategy, however.

## Summary of Findings

The above examples have shown that:

- Workers with short service (case 4) and with rising wages (case 5) have the greatest incentive for working between ages 60 and 64 because such work effort will increase their pensions after age 65. Short-service workers gain a year with pension points and thus reduce the amount their pensions are decreased because of having less than 30 years with pension points. Workers with rising wages replace a year of lower pension points with a year of higher pension points for each year worked between ages 60 and 65. Obviously, the more these rising wage earners work, the higher will be their average pension points and thus their pension levels at age 65.
- Workers facing falling wage rates (case 6) have the least incentive to work past age 60.
- The Early Retirement option is the least desirable alternative under each of the three measures of relative attractiveness.
- The relative attractiveness of the six pension-work alternatives is sensitive to the assumptions made about life expectancy, discount rates and earnings patterns.

Replacement rates, income from age 60, and the average cost per hour of leisure give some indication of the relative attractiveness of the various pension alternatives to the Swedish worker. These measures are not sufficient to allow one to unambiguously determine which alternative any given worker will select. The choice a worker will actually make depends on the individual's health, preference for leisure, net worth, private pension income and other unearned income, family size and the degree of family dependency, and perhaps even other factors. The purpose of these examples is only to illustrate the financial trade-offs among work, leisure, and pensions under options available in the Swedish pension system.

## Actual Experience

About 60 percent of all Swedes—half the men and two-thirds of the women in the age 60-64 range—were receiving some kind of a pension in January 1981 (table 4). It is interesting that the percent taking the various more-leisure options follow the cost of leisure orderings for the average, steady-earnings worker. The Disability option was found to be the least costly leisure alternative. Twenty-five percent of all Swedes aged 60-64 receive a Disability pension even though the eligibility requirements are such that they restrict the number of persons eligible to receive it. The Partial Pension options were the next least costly, and 14 percent of the Swedes in the 60-64 age range had partial pensions. Only 3 percent of this age group selected the Early Retirement option, the most expensive in terms of the cost of leisure.

## Swedish Experience with Partial Pensions

The Swedish partial pension system took effect on July 1, 1976. Almost 480,000 persons aged 60-64 were then living in Sweden, but only 200,000 of them were eligible to receive a partial pension. Of those ineligible, about 220,000 were not in the labor force; 35,000 were ineligible because they were self-employed; and 25,000 were ineligible either because they did not have 10 years of pensionable income from age 45 or because they were not working at least 22 hours per week. The self-employed became eligible to receive partial pension benefits on January 1, 1980. The number of persons aged 60-64 eligible for partial pensions is expected to remain about 240,000 for some years to come.

The number of persons receiving partial pension benefits has increased steadily since the system was inaugurated. By the end of December 1976, after the program was in place for only 6 months, almost 15,000 persons had been awarded partial pensions. An estimated 68,000 workers were receiving partial pensions in May of 1981—about 28 percent of all eligible workers or 14 percent of the population aged 60-64. About 500 individuals apply for partial pensions each week. The partial pension originally replaced 65 percent of the income loss sustained when a wage or salary employee transferred to part-time work, but because of financing deficits in the

**Table 4**.—Percent of Swedes aged 60-64 receiving pensions, January 1981

| Type of pension | Total | Men | Women |
|---|---|---|---|
| Total with pension | 60.1 | 51.1 | 68.7 |
| Disability | 25.0 | 27.9 | 22.4 |
| Reduced Pension | 2.8 | 3.0 | 2.6 |
| Partial Pension | 14.3 | 20.2 | 8.8 |
| Widow's Pension | 6.9 | .0 | 13.4 |
| Wife's Supplement | 11.1 | .0 | 21.6 |
| Not receiving a pension | 39.9 | 48.9 | 31.3 |

Source: Swedish Embassy, Washington, D.C.

system, the replacement rate was reduced to 50 percent for those who filed for partial pension benefits after December 31, 1980. The announcement in the fall of 1980 that these benefits would be reduced caused the number of applicants to triple until the end of 1980.

By early 1981, about 1 year after they were included in the program, only 5 percent of the eligible self-employed were receiving partial pensions. This percentage may rise over time, but it is not expected to approach the 33-percent participation rate of the wage and salary workers since, in order to qualify, the self-employed must reduce their work effort by at least 50 percent, yet average at least 17 hours per week. Wage and salary workers, on the other hand, can qualify if they reduce their work effort by as little as 5 hours a week as long as they continue to work an average of at least 17 hours per week.

Although wage and salary employees may reduce their work week by as little as 5 hours, the great majority (75 percent) have chosen to reduce their work from full time to half time. Working alternate weeks appears to be the most common way of reducing work time. Other ways include working fewer 8-hour days per week or working fewer hours per day.

It does not appear that workers desiring to partially retire have had any trouble converting to part-time employment. Less than 1 percent were denied part-time work by their employers.[15] The ease of finding part-time work resulted from a general rise in part-time employment during the 1970's and from the recession in Sweden during the late 1970's. Many firms, especially those in the commodity manufacturing sector, used the partial retirement of their older workers as a means of reducing employment in times of economic hardship. About half the hours lost due to the partial retirement of workers were not made up by new hires. Thus, the partial retirement system allowed employers to reduce their work force by the equivalent of 10,000–14,000 full-time workers by May 1981.[16]

A 1978 survey of partial retirees found that they were generally quite pleased with their lives and that the slight reduction in income did not cause any financial hardship. Further, it was found that the health of partial pensioners deteriorated less over the 1976–78 period than did that of samples of full-time employees and disability pensioners.[17]

Another study found that many employers have been eager to utilize the partial retirement of their older employees as a means of reducing labor costs in the current recessionary period.[18] Most employers do not think that production will be adversely affected by partial retirements since they believe part-time employees often produce more per working hour than full-time employees. From the point of view of employers in this study, the main drawback of partial retirement centered around the distribution of working hours. Apparently, there was some conflict between the preferences of management and those of partial retirees—especially in firms whose production involved shift work.

Overall, these studies seem to indicate that the Swedes are pleased with their partial pension scheme. Workers are satisfied since the program allows them to gradually reduce their work effort without a great percentage reduction in their income. Employers have been satisfied for the most part since the program allows them to lower their labor costs in a recessionary period. Whether they will be as satisfied once the current recession ends remains to be seen. The financing problems that were caused by underestimating the popularity of the system were temporarily corrected by doubling the tax rate on employer payroll and by reducing the replacement rate on lost earnings for employees who opted for the Partial Pension alternatives after January 1, 1981. Currently, the program is again in deficit and payroll tax revenues are now being supplemented from general tax revenues.

## Summary

The Swedish national pension system offers a variety of retirement options for its workers. One significant and innovative feature of the system is the Partial Pension scheme that permits a worker who reaches age 60 to reduce the number of hours worked and receive half the lost earnings back from the government in the form of a special pension benefit. To qualify for a partial pension, the worker must meet certain work-related eligibility requirements. The worker must have pension points for at least 10 of the preceding 15 years, have worked for at least 5 of the preceding 12 months, and have worked an average of at least 22 hours per week. Only about 40 percent of the nonself-employed Swedes aged 60–64 meet these work-related requirements. The partial pension scheme has been very popular, and about one-fourth of the eligible workers—or 14 percent of the entire Swedish population aged 60–64—are receiving partial pensions.

The worker wishing to obtain a partial pension also faces some nonwork-related constraints. The individual must secure employer approval (and in some cases union approval) before beginning work part time. Most employers in Sweden have willingly made part-time jobs available to their older workers. There is some indication that employers have used the partial pension scheme as a means of reducing their labor costs in a period of recession. It remains to be seen if they will voluntarily offer part-time employment to their older workers in periods of tight labor markets.

[15] Goran Crona, **Partial Retirement in Sweden**, a paper presented at the XII International Congress of Gerontology, Hamburg, West Germany, July 12–17, 1981.

[16] The 10,000–14,000 worker reduction is based on the assumption that partial retirees reduce their work by an average of 12–15 hours per week.

[17] Goran Crona, **op. cit.**

[18] Goran Crona, "Partial Retirement in Sweden: Development and Experience," **Aging and Work**, spring 1980, pages 113–120.

Swedish workers not receiving partial pensions have two other alternatives for receiving pensions between the ages of 60 and 64: (1) They can receive disability benefits if they are disabled or if they are unemployed and have exhausted their unemployment benefits, or (2) they can also receive actuarially reduced pensions. Workers can receive half their pension benefits before age 65 at an actuarially reduced rate and receive the other half unreduced at age 65. Only about 3 percent of Swedes aged 60-64 select reduced pensions.[19] The analysis in this article suggests that this low acceptance rate results from the existence of better pension options in the form of partial pensions and disability pensions. The disability pension eligibility requirements are liberal enough that 25 percent of Swedes aged 60-64 are receiving such pensions.

Between 40 percent and 45 percent of the Swedes aged 60-64 receive disability, partial pension, or reduced pension benefits. Not all of the remaining 55-60 percent are eligible for pensions before age 65. Some are dependent spouses of workers and as such are eligible for benefits only under the demogrant portion of the Swedish national pension system. Most of the others will begin receiving pension benefits at age 65. Less than 1 percent defer receipt of their pension past age 65, even though there is no earnings test and benefits are increased by 7.2 percent for each year of deferral.

Financing for the Swedish national pension system comes basically from employer contributions. For 1982, the contribution rate for the demogrant and earnings-related pension is 17.85 percent of total payroll for all workers aged 65 and younger. These contributions are supplemented by government appropriations to the demogrant program. The partial pension system is financed separately with an employer contribution of 0.5 percent of total payroll for all workers aged 65 and younger. Currently, these contributions are also being supplemented by government appropriations.

The Swedish national pension system differs considerably from the U.S. Social Security system. The Swedish system offers more retirement options and in many ways its eligibility criteria are less restrictive. For instance, old-age benefits can be received at age 60 in Sweden whereas in the United States, the minimum age for retirement benefits is 62. Also, the Swedish disability eligibility requirements are quite relaxed compared with those of the United States. The cost of the Swedish national pension system, including government subsidies, is over 20 percent of total payroll. By comparison, the cost of the U.S. Old-Age, Survivors, and Disability Insurance program in 1982 is 10.8 percent of taxable payroll. In addition, all earnings from covered employment in Sweden are subject to the payroll tax, whereas in the United States, only 91 percent of earnings from covered employment are taxable. Thus, in terms of total payroll, the Swedish system costs roughly twice as much as the U.S. system.

---

[19] It is not clear whether this 3 percent includes those who accept any reduced pension benefits or only those who accept their full pension at a reduced rate.

# Notes and Brief Reports

## Effects of OASDI Benefit Increase, June 1982*

Effective June 1982, beneficiaries of the Old-Age, Survivors, and Disability Insurance (OASDI) program were given a 7.4-percent cost-of-living increase in benefits. This increase, the eighth automatic rise in benefits under legislation enacted in 1972 and 1973, was reflected in benefit checks issued early in July.

Automatic benefit increases are tied by statute to rises in the Consumer Price Index (CPI). They are initiated whenever the CPI for the first calendar quarter of a year exceeds the CPI for the base quarter by at least 3 percent. The base is defined as either the first calendar quarter of the last year in which there was an automatic adjustment or any quarter in which a general benefit increase was effective.

In the same month that the 7.4-percent benefit increase went into effect, a new rounding-of-benefits provision mandated by the 1981 amendments also became effective. Under this provision, primary insurance amounts (PIA's) and monthly benefit amounts (MBA's) that are not multiples of $0.10 and $1.00, respectively, are rounded down to those multiples. Thus, an individual with a May 1982 PIA and MBA of $300.30 would have had a June 1982 PIA of $322.50 ($300.30 × 1.074 = $322.52, rounded to $322.50) and a monthly benefit of $322.00, resulting in a benefit increase of 7.23 percent.

The initial effects of the cost-of-living increase can best be demonstrated by comparing the monthly benefits payable to beneficiaries immediately before and after the increase. Table 1 presents such data for various types of beneficiaries as well as for the total beneficiary population. The cost-of-living increase resulted in a rise of $884 million in total monthly benefits payable to 35.5 million persons receiving OASDI benefits at the end of May 1982. Retired workers and their auxiliary beneficiaries accounted for 70 percent of the increase, disabled workers and their auxiliaries accounted for 11 percent, and survivors for 19 percent.

Average monthly benefits payable to retired workers after the cost-of-living increase were $464.68 for men and $359.38 for women—increases of $31.50 and $24.25, respectively. Benefit payments to male disabled workers increased $33.31, raising their average amount to $486.99. For female disabled workers, the average increase was $23.83, which resulted in an average monthly benefit of $351.11. Average increases for auxiliaries of living workers ranged from $8.57 for children of disabled workers to $13.94 for spouses of retired workers. Among survivor beneficiaries, average benefit increases ranged from a low of $16.48 for disabled widows and widowers to a high of $25.45 for nondisabled widows and widowers. These increases resulted in average benefits of $246.74 for those in the former group and $376.46 for those in the latter.

Social Security benefits are based on a worker's PIA. In almost all instances, the PIA is derived from the individual's covered earnings averaged over his or her working lifetime. The full PIA is payable to a retired worker who becomes entitled to benefits at age 65 and to a disabled worker at any age. A retired worker may receive benefits as early as age 62, but his or her PIA is subject to a reduction of 5/9 of 1 percent for each month of entitlement before age 65. Widows and widowers entitled at age 65 also receive a benefit amount equal to the full PIA, provided that the deceased spouse did not receive a retirement benefit before age 65. A widow(er)'s benefit is subject to a reduction of 19/40 of 1 percent for each month of entitlement before age 65 (maximum reduction of 28.5 percent). Benefits for disabled widow(er)s are further reduced 43/240 of 1 percent for months before age 60 (maximum reduction of 50 percent). Other auxiliary beneficiaries of retired, disabled, and deceased workers are entitled to set proportions of the PIA, subject to the family maximum.

Before 1979, a worker's PIA was determined by calculating his or her average monthly earnings (AME) for a specified number of highest earning years and then finding the corresponding PIA from a table (the benefit could also be calculated by means of a formula). The 1977 Amendments to the Social Security Act introduced a new method for computing the earnings to be used in the computation of the PIA for most workers who attain age 62, become disabled, or die in 1979 or later. Under this method, the worker's earnings are first indexed to reflect average wage levels in the economy during his or her working years before the averaging of earnings takes place. A formula is then applied to the result—known as the average indexed monthly earnings

| Survivors | 7,281,608 | 2,324,702 | 2,492,880 | ... | ... | ... | 7.23 |
| Widows and widowers, nondisabled | 4,417,344 | 1,550,538 | 1,662,950 | 351.01 | 376.46 | 25.45 | 7.25 |
| Widows and widowers, disabled | 120,035 | 27,639 | 29,617 | 230.26 | 246.74 | 16.48 | 7.16 |
| Widowed mothers and fathers | 524,986 | 148,057 | 158,778 | 282.02 | 302.44 | 20.42 | 7.24 |
| Children | 2,206,141 | 594,381 | 637,153 | 269.42 | 288.81 | 19.39 | 7.20 |
| Parents | 13,102 | 4,087 | 4,382 | 311.97 | 334.46 | 22.49 | 7.21 |
| Special age-72 beneficiaries[3] | 69,591 | 8,086 | 8,678 | ... | ... | ... | 7.32 |

[1] Totals may not add due to rounding.

[2] Includes transitionally insured beneficiaries.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

(AIME)—in order to arrive at the PIA. For workers who attained age 62, became disabled, or died in 1982, the formula is as follows:

> Ninety percent of the first $230 of AIME, plus 32 percent of AIME in excess of $230 through $1,388, plus 15 percent of AIME in excess of $1,388.

The 7.4-percent cost-of-living increase is applied to the result obtained from the above formula and the final figure is rounded down to the lower $0.10 if not a multiple of $0.10. Table 2 shows examples of benefits payable to various types of beneficiaries and family groups at selected AIME levels.

The AIME's used in the table range from $100 through $2,587—the AIME for workers who had maximum earnings in 1981 and 1982. The $2,587 AIME, however, is only possible in survivor cases in which the worker dies at a young age and has the minimum 2 years of earnings required in the computation. An AIME of $2,316 was also selected since that is the highest AIME obtainable in 1982 by a person becoming disabled in 1982 and whose AIME is based on 2 years of maximum earnings in 1980 and 1981. AIME's of $1,600, $1,900, and $2,316 are generally not possible for retired workers. AIME's of $230 and $1,388 were also selected since they are the "bend points" defining the brackets in the formula for beneficiaries becoming eligible in 1982.

The 1977 amendments also introduced a transitional guarantee provision to protect workers who were nearing retirement age when the amendments went into effect. This provision is applicable only to workers who attain age 62 from January 1979 through December 1983, had some covered earnings before 1979, and were not eligible for a Disability Insurance benefit before 1979. It guarantees the worker a benefit amount derived from his or her AME using the December 1978 PIA tables if it results in a higher benefit amount than under the AIME method. This computation method may also be used to compute benefits for survivors of workers who were eligible for benefits but did not apply for them.[1]

Effective June 1982, the highest PIA for a worker who retired at age 65 and who did not have a prior period of disability is $729.50 based on the transitional-guarantee computation method. Minimum and maximum benefits payable to workers retiring at age 65 during the period 1940–82 are shown in table 3.

---

McKay, **Computing a Social Security Benefit After the 1977 Amendments** (Actuarial Note No. 100), Office of the Actuary, Social Security Administration, February 1980, and Steven F. McKay and Bruce D. Schobel, **Effects of the Various Social Security Benefit Computation Procedures** (Actuarial Study No. 86), Office of the Actuary, Social Security Administration, July 1981.

## Table 2.—Examples of monthly cash benefit awards for selected beneficiary families with first eligibility in 1982, by average indexed monthly earnings, effective June 1982

| Beneficiary family | Average indexed monthly earnings of insured worker | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | $100 | $230 | $400 | $700 | $1,000 | $1,388 | $1,600 | $1,900 | $2,316 | $2,587 |
| Primary insurance amount | $96.60 | $222.30 | $280.70 | $383.80 | $486.90 | $620.30 | $654.40 | $702.80 | $769.80 | $813.50 |
| Maximum family benefit | 144.90 | 333.40 | 421.10 | 658.80 | 897.20 | 1,086.30 | 1,146.10 | 1,230.60 | 1,347.90 | 1,424.50 |
| Disability maximum family benefit [1] | 96.60 | 222.30 | 365.10 | 575.70 | 730.40 | 930.50 | 981.70 | 1,054.20 | 1,154.70 | ... |
| Disabled worker: | | | | | | | | | | |
| Worker alone | 96.00 | 222.00 | 280.00 | 383.00 | 486.00 | 620.00 | 654.00 | 702.00 | 769.00 | ... |
| Worker, spouse, and 1 child | 96.00 | 222.00 | 364.00 | 573.00 | 728.00 | 930.00 | 980.00 | 1,052.00 | 1,153.00 | ... |
| Retired worker claiming benefits at age 62: | | | | | | | | | | |
| Worker alone [2] | 77.00 | 177.00 | 224.00 | 307.00 | 389.00 | 496.00 | ... | ... | ... | ... |
| Worker with spouse claiming benefits at— | | | | | | | | | | |
| Age 65 or over | 125.00 | 288.00 | 364.00 | 498.00 | 632.00 | 806.00 | ... | ... | ... | ... |
| Age 62 [2] | 113.00 | 260.00 | 329.00 | 450.00 | 571.00 | 728.00 | ... | .. | ... | ... |
| Widow or widower claiming benefits at— | | | | | | | | | | |
| Age 65 or over [3] | 96.00 | 222.00 | 280.00 | 383.00 | 486.00 | 620.00 | 654.00 | 702.00 | 769.00 | 813.00 |
| Age 60 | 69.00 | 158.00 | 200.00 | 274.00 | 348.00 | 443.00 | 467.00 | 502.00 | 550.00 | 581.00 |
| Disabled widow or widower claiming benefits at age 50 | 48.00 | 111.00 | 140.00 | 191.00 | 243.00 | 310.00 | 327.00 | 351.00 | 384.00 | 406.00 |
| 1 surviving child | 72.00 | 166.00 | 210.00 | 287.00 | 365.00 | 465.00 | 490.00 | 527.00 | 577.00 | 610.00 |
| Widow or widower age 65 or over and 1 child | 144.00 | 332.00 | 420.00 | 658.00 | 851.00 | 1,085.00 | 1,144.00 | 1,229.00 | 1,346.00 | 1,423.00 |
| Widowed mother or father and 1 child | 144.00 | 332.00 | 420.00 | 574.00 | 730.00 | 930.00 | 980.00 | 1,054.00 | 1,154.00 | 1,220.00 |
| Widowed mother or father and 2 children | 144.00 | 333.00 | 420.00 | 657.00 | 897.00 | 1,086.00 | 1,146.00 | 1,230.00 | 1,347.00 | 1,422.00 |

[1] The 1980 Amendments to the Social Security Act provide for different family maximum amounts for disability cases where the worker became entitled after June 1980. For disability beneficiaries with an AIME in June 1982 of $251 or less, the family maximum is equal to the PIA. If the AIME is $252 through $540, the family maximum is equal to 85 percent of the AIME plus the cost-of-living increase. If the AIME is greater than $540, the maximum is equal to 150 percent of the PIA.

[2] Assumes maximum reduction.

[3] A widow(er)'s benefit amount is limited to the amount the spouse would have been receiving if still living but not less than 82 1/2 percent of the PIA.

## Table 3.—Minimum and maximum monthly retired-worker benefits payable to individuals who retired at age 65, 1940–82[1]

| Year attained age 65 [2] | Minimum benefit | | Maximum benefit [4] | | | |
|---|---|---|---|---|---|---|
| | Payable at retirement | Payable effective June 1982 [3] | Payable at retirement | | Payable effective June 1982 [3] | |
| | | | Men | Women | Men | Women |
| 1940 | $10.00 | $182.00 | $41.20 | ... | $353.00 | ... |
| 1941 | 10.00 | 182.00 | 41.60 | ... | 353.00 | ... |
| 1942 | 10.00 | 182.00 | 42.00 | ... | 357.00 | ... |

| 1982 | 170.30 | 182.00 | 679.30 | ... | 729.00 | ... |

[1] Based on AMW method for workers retiring 1940–81 and the transitional guarantee method for workers retiring in 1982.

[2] Assumes retirement at beginning of year.

[3] Effective June 1982, regular monthly benefits are rounded down to the next lower dollar after reductions for family maximum, age, workers' compensation, and government pension offset and/or deductions due to earnings and Medicare premiums. The June 1982 benefit amounts assume no deductions.

[4] Benefits for both men and women are shown in men's column, except where benefits shown separately. Assumes no prior period of disability.

[5] Effective for February 1968.

# Black Lung Benefits Revision*

On December 29, 1981, President Reagan signed the Black Lung Benefits Revenue Act of 1981 (Public Law 97-119), effective January 1, 1982. This legislation marked the third major revision since the program was established by title IV of the Federal Coal Mine Health and Safety Act of 1969. The program provides monthly cash benefits to coal miners who are disabled because of pneumoconiosis, or "black lung," and to survivors of miners who died from or were disabled by this disease.

## Historical Background

The black lung benefit program was intended to be temporary. It was administered by the Federal Government and benefits were paid out of general revenues. The program was established in two parts, with the Social Security Administration implementing the initial phase and the U.S. Department of Labor the second. In the expectation that State workers' compensation programs would eventually provide this protection, Congress stipulated that the program would end December 30, 1976. (In 1972, the termination date was extended to December 30, 1981.)

The program allowed a large number of individuals to file for benefits—including workers who became disabled and survivors of workers who died long before the passage of the law. By 1973, nearly 500,000 miners, widows, and children were receiving monthly benefits under the black lung program. The benefit amount was established at one-half the minimum monthly benefit amount payable to a totally disabled Federal Government employee in the first step of grade GS-2 under the workers' compensation program for Federal employees. A dependent's allowance was also payable.

In 1972, Congress made a number of liberalizations in the program and extended from December 1972 to December 1973 the date after which the Department of Labor took responsibility for administering all new black lung claims. The benefits were to be paid by the State if the State had been certified by the Department of Labor as having an adequate workers' compensation program for pneumoconiosis. If there was no such coverage, benefits were to be paid by the responsible coal mine operator. And if a responsible operator could not be established, then the Department of Labor was to pay claims from general revenues. Claims initiated before July 1973 (and, in certain survivor cases, by December 1973) continued to be paid by the Social Security Administration from general funds.

In addition to the cash benefits authorized under the original law, the Labor Department program was expanded to include benefits for medical diagnosis and treatment for conditions resulting from pneumoconiosis. (In 1978, this provision was broadened to include beneficiaries under the original legislation as well.)

Eventually it became evident that the States were not going to amend their workers' compensation laws to meet the Federal standards for taking over black lung benefits. Consequently, the act was further amended in 1978 to provide an industry trust fund (the Black Lung Disability Trust Fund), which, beginning in 1978, provided benefits when no responsible coal mine operator could be identified. The Government-administered Trust Fund was to be financed by an excise tax on coal taken from mines.

In the same 1978 legislation, coverage and eligibility under the Department of Labor program were expanded; benefits were provided for new categories of workers and rules for medical eligibility were liberalized. The program termination date in the law was eliminated, and the program was made permanent.

There were other important changes in the 1978 law. First, claims could no longer be denied automatically because a worker was currently employed in a coal mine. Similarly, survivor claims could no longer be denied solely because the miner was still employed in a mine at the time of death. Second, benefit eligibility was established for survivors of workers having at least 25 years of coal mine employment before June 30, 1971, unless it could be shown that the miner had not been partially or totally disabled because of black lung disease at the time of death. (This provision adds to two earlier presumptions that made survivors eligible for benefits if the deceased worker had at least 10 or 15 years of mining experience and had established a disabling respiratory condition of specified severity.) Third, X-rays interpreted by board-qualified physicians were to be accepted as valid evidence, without further review, to establish disability resulting from pneumoconiosis.

From the inception of the program in 1970 through 1981, about $12.2 billion in black lung benefits have been paid to coal mine workers and their survivors. About 82 percent was paid through the Social Security Administration and 18 percent through the Department of Labor. Of the $1.7 billion paid in 1981, 62 percent was through the Social Security Administration and 38 percent through the Department of Labor.

In 1981, only about one-third of the benefits paid through the Department of Labor were financed by the excise tax. The remaining two-thirds—a $500 million deficit—came primarily from general revenues. The amount needed from general revenues has increased each year since the Trust Fund began in 1978. These deficits were counter to the intent of Congress and the

Administration when they established the Fund, since it was supposed to alleviate the burden of the Labor Department's program on general revenues.

## The 1981 Amendments

The Black Lung Benefits Revenue Act of 1981 was intended to stabilize the program administered by the Labor Department by reforming certain eligibility and benefit provisions and by increasing Trust Fund revenues. The major provisions of this act are summarized below. Each provision is effective January 1, 1982, unless otherwise specified.

### Trust Fund Financing

**The coal producers excise tax.** The excise tax on coal was increased to the lesser of (1) $1 per ton of coal from underground mines and $0.50 per ton of coal from surface mines, or (2) 4 percent of the coal's selling price. Previously, the tax was the lesser of (1) $0.50 per ton from underground mines and $0.25 per ton from surface mines, or (2) 2 percent of the selling price. For the first 6 months of 1982, about half of the tax revenues collected for the Trust Fund were from the $1 per ton rate, more than one-fourth from the $0.50 rate, and the remainder from the 4 percent of the selling price rate. The 1981 amendments provide that the new rates will revert to those under the previous law by the earlier of January 1, 1996, or after all principal and interest owed to the Treasury by the Trust Fund have been paid.

These higher tax rates are expected to have by far the largest short-term effect of all the 1981 amendments in improving the solvency of the Trust Fund. Projections made by the Labor Department indicate that the Fund should be solvent and previous advances repaid by 1995.

**Proceeds from excise taxes.** The 1972 amendments provided that a coal mine operator could self-insure the liability for black lung benefits by making contributions to a qualified tax-exempt trust. Specified misuse of such a trust triggers certain excise taxes. Part of the proceeds of these taxes went to the Black Lung Disability Trust Fund and the remainder to the general fund of the Treasury. As a result of the 1981 law, all the proceeds of these taxes are to be automatically appropriated to the Trust Fund.

**Increased interest rates.** Before the 1981 legislation, mine operators could delay paying benefits for which they were responsible and the benefits would then be paid by the Trust Fund. The operators could repay the benefits advanced by the Trust Fund and interest at an annual interest rate of 6 percent—considerably below recent market rates. The 1981 law raised the interest rate to 15 percent in 1982; after 1982 the interest rate will be based on the average rate for all marketable and interest-bearing obligations of the public debt. The increase in the interest rate is to discourage responsible operators from delaying payment of black lung benefits.

### Conditions for Benefits

Under the black lung program, a claimant must meet three general conditions in order for the application to be approved: (1) the miner must have (or, if deceased, must have had) pneumoconiosis; (2) the miner must be totally disabled by the disease (or must have been totally disabled by it at the time of death); and (3) the pneumoconiosis must have been the result of coal mine employment. Eligibility for benefits can be established through a variety of tests, including medical diagnostic procedures such as chest X-rays, pulmonary function studies, blood-gas tests, and general physical examinations, as well as by autopsy in the event of death.

Regulations define disability and pneumoconiosis and establish conditions to be taken into account in evaluating the available medical information. These conditions include a number of presumptions used to determine eligibility even when X-rays and other medical information do not provide conclusive evidence of pneumoconiosis or disability. These legislative provisions and regulatory conditions include features added by the 1972 and 1978 amendments, as well as those in the original 1969 legislation.

The 1981 amendments made several changes in the evidentiary rules. All of these changes are prospective—that is, they affect only new claims filed after January 1, 1982.

**Second opinion.** The Department of Labor was given authority to use a second opinion on chest X-rays for diagnosing black lung disease. As noted earlier, the 1978 amendments required the Labor Department to accept the positive reading by a qualified radiologist of an X-ray of satisfactory quality as proof of black lung disease: there was no provision for Government rereading, so long as there was other evidence of a pulmonary or respiratory impairment and no evidence of fraud.

**Elimination of presumptions.** Three evidentiary presumptions were eliminated that had been available previously to determine a claimant's mining employment as the cause of black lung disease and therefore to establish his eligibility for benefits.

First, the 15-year presumption of pneumoconiosis was rescinded. Under this earlier rule, there was a rebuttable presumption that the miner was totally disabled due to pneumoconiosis even though he was not diagnosed as having complicated pneumoconiosis if evidence showed that (1) there was a totally disabling pulmonary or respiratory impairment of some kind, and (2) the miner had been employed in a coal mine (underground or with conditions substantially similar to underground) for at least 15 years. This presumption had also been allowed for survivor benefit claims to show that a miner had died from pneumoconiosis or that at the time of death the miner was totally disabled by pneumoconiosis.

Second, the 10-year presumption concerning death was rescinded. Previously if a miner had been engaged in coal mine employment for 10 years or more and died from a respiratory disease, there was a rebuttable presumption that death was due to pneumoconiosis.

Third, the 25-year survivor presumption was rescinded, effective for claims filed more than 6 months after the date of enactment. This standard had provided that eligible survivors were presumed to be entitled to benefits if the miner died on or before March 1, 1978, and had been employed for 25 or more years in a coal mine before June 30, 1971. This presumption did not apply to miners who were found not to be even partially disabled due to pneumoconiosis at the time of death.

**Trust Fund responsibility.** Part of the requirement that the Trust Fund pay benefits in contested cases was rescinded. Under the 1981 amendments, the Trust Fund is no longer responsible for any retroactive lump-sum benefits (those payable to claimants who are entitled as of a date earlier than their application). However, the Trust Fund will continue to pay benefits that accrue after the initial determination while the claim is being contested.

**Benefits for survivors.** Eligibility for survivor benefits was restricted in two additional ways. First, affidavits to establish that a miner is totally disabled or died due to pneumoconiosis (where no medical or other relevant evidence is available) are now sufficient to establish entitlement only if they are provided by disinterested third parties who cannot receive benefits. (Previously affidavits supplied by widows were acceptable.) Second, the survivor of a miner who had been totally disabled by pneumoconiosis is eligible for benefits only if the miner's death can be established to have been from pneumoconiosis. Previously, benefits were awarded in such cases regardless of the cause of death.

**Benefit offset.** The same earnings test that is applied to Social Security benefits is now applied to the black lung benefits of miners. The benefit is reduced by $0.50 for each $1 of excess earnings. Black lung benefits to miners who had filed claims under the provisions administered by the Social Security Administration were already subject to this earnings reduction.

All of the above changes are expected to reduce the proportion of claims that are approved. The first two changes—permitting X-rays to be reread and the elimination of the 15-year presumption of pneumoconiosis—are each expected to reduce the costs of the program more than any of the other changes.

## Transfer of Claims to the Trust Fund

Approximately 10,200 claims being made against responsible coal mine operators have been transferred to the Trust Fund. In general, these claims had been denied before March 1, 1978, but had been reviewed and approved under the liberalized criteria of the Black Lung Benefits Reform Act of 1977. Before being transferred to the Trust Fund, the great majority of the claims were being contested by employers. (Others were being paid by mine operators.) They represent a significant additional cost to the Trust Fund, since many of these cases that were previously in interim pay status will now be permanent liabilities of the Trust Fund, thus offsetting much of the cost reduction expected from other provisions of the 1981 amendments.

## Mandated Study

The 1981 legislation had several other provisions. The most noteworthy was the mandate for the Labor Department, in consultation with the Department of Health and Human Services, to undertake a study of: (1) the current medical methods for diagnosing pneumoconiosis, (2) the nature and extent of impairment and disability attributable to simple and complicated pneumoconiosis, and (3) the benefits provided by the Black Lung Benefits Act, other benefits received by black lung beneficiaries, and benefits that would be received if workers' compensation programs were applicable in lieu of benefits under the Black Lung Benefits Act. The Labor Department report is due by July 1, 1983.

## Summary

The overall effects of the 1981 amendments will not be fully seen for some time, although the doubling of the excise tax on coal mine operators has already started to improve the financial solvency of the program. However, the major effects of the new eligibility restrictions will be long-term rather than immediate since they only apply to new claims. Also, a substantial number of beneficiaries will be kept on the rolls as a result of the provision that transfers to the Trust Fund the liability for approximately 10,000 claimants who had been made eligible under the 1978 amendments. Of course, the overall operation of the economy in the light of energy needs and the demand for coal will be another significant factor in determining the future financial status of the black lung benefits program.

# Meaning of the Social Security Number*

One of the most urgent tasks following passage of the Social Security Act in 1935 was to devise a method for uniquely identifying the earnings records for the millions of persons covered by the new law. Since entitlement to Social Security and the benefit amount were to be determined from a person's earnings over many years, a method was needed for maintaining permanent and accurate earnings records for each person working in employment covered by the Social Security program. The Social Security number was developed for this purpose.

The Social Security number (SSN) consists of nine digits divided into three parts, with each part usually separated by a hyphen:

| XXX | - | XX | - | XXXX |
|---|---|---|---|---|
| Area number | | Group number | | Serial number |

This unique configuration, plus the fact that an SSN is used for many purposes besides employment (income tax returns, bank accounts, drivers' licenses, and so forth), makes the number easily recognizable. Although most people believe that each part of the number has a special significance, few know what that significance is.

Until 1972, the *area number* indicated the location (State, territory, or possession) of the Social Security office that issued the number. When the Social Security numbering system was developed, one or more area numbers were allocated to each State based on the anticipated number of issuances in the State (table 1). Because an individual could apply for an SSN at any Social Security office, the area code did not necessarily indicate where the person lived or worked. Since 1972, the Social Security Administration has been issuing SSN's centrally from its headquarters in Baltimore. The area code now indicates the person's State of residence as shown on the SSN application.

There are several exceptions to these rules. Before 1964, area numbers 700–728 were assigned by the Railroad Retirement Board to workers covered by the Railroad Retirement Act.[1] Area number 586 is divided among American Samoa, Guam, the Philippines, and Americans employed abroad by American employers and, from 1975 to 1979, it was also used for Indochinese refugees. Area number 580 is assigned to persons applying in Puerto Rico and the Virgin Islands.

**Table 1.—Assignment of area numbers by State**

| State | Area number |
|---|---|
| Alabama | 416–424 |
| Alaska | 574 |
| American Samoa | 586 (group numbers 20–28) |
| Arizona | 526–527, [1] 600–601 |
| Arkansas | 429–432 |
| California | 545–573, [1] 602–626 |
| Colorado | 521–524 |
| Connecticut | 040–049 |
| Delaware | 221–222 |
| District of Columbia | 577–579 |
| Florida | 261–267, [2] 589–595 |
| Georgia | 252–260 |
| Guam | 586 (group numbers 01–18) |
| Hawaii | 575–576 |
| Idaho | 518–519 |
| Illinois | 318–361 |
| Indiana | 303–317 |
| Iowa | 478–485 |
| Kansas | 509–515 |
| Kentucky | 400–407 |
| Louisiana | 433–439 |
| Maine | 004–007 |
| Maryland | 212–220 |
| Massachusetts | 010–034 |
| Michigan | 362–386 |
| Minnesota | 468–477 |
| Mississippi | 425–428, 587, [1] 588 |
| Missouri | 486–500 |
| Montana | 516–517 |
| Nebraska | 505–508 |
| Nevada | 530 |
| New Hampshire | 001–003 |
| New Jersey | 135–158 |
| New Mexico | 525 and 585 |
| New York | 050–134 |
| North Carolina | 237–246, 232 (group number 30) |
| North Dakota | 501–502 |
| Ohio | 268–302 |
| Oklahoma | 440–448 |
| Oregon | 540–544 |
| Pennsylvania | 159–211 |
| Puerto Rico | 580 (group number 20), 581–584, [1] 596–599 |
| Rhode Island | 035–039 |
| South Carolina | 247–251 |
| South Dakota | 503–504 |
| Tennessee | 408–415 |
| Texas | 449–467 |
| Utah | 528–529 |
| Vermont | 008–009 |
| Virginia | 223–231 |
| Virgin Islands | 580 (group numbers 01–18) |
| Washington | 531–539 |
| West Virginia | 232–236 (except group number 30) |
| Wisconsin | 387–399 |
| Wyoming | 520 |
| Railroad Retirement Board | 700–728 |
| Outside United States | 586 (group numbers 30–58 and 60–78) |

[1] Area number(s) assigned for future use. Arizona is expected to start using the new series in 1982, California in 1988, Mississippi in 2002, and Puerto Rico in 1983.

[2] In 1980, Florida used up its initial area allotments and a new series (589–595) was assigned.

[3] Refers to SSN's assigned to Americans residing abroad and employed by American employers.

---

* By Erma Barron and Felix Bamberger, Division of OASDI Statistics, Office of Research and Statistics, Office of Policy, Social Security Administration.

[1] Virtually all railroad workers had been assigned SSN's by 1964; therefore there no longer was a need to have a separate numbering system.

The *group number* has no special geographic or data significance. It is used to break the numbers into blocks of convenient size for SSA's processing operations and for controlling the assignments to the States.

The last four digits, the *serial number*, represent a numerical series from 0001 to 9999 within each group. The order in which the SSN's are issued is as follows: For each area number, the group number follows an odd and even sequence starting with odd numbers 01 to 09, even numbers 10 to 98, even numbers 02 to 08, and finally odd numbers 11 to 99. The serial number begins with 0001 and continues in sequence,[2] except every fifth SSN is given a serial number from the series 2001-2999 and 7001-7999. The last three serial numbers issued are 9998, 9999, and 7999. Serial number 0000 is never used. Each State goes through all of its area numbers with group number 01 and serial numbers 0001-9999 and 7999 before using group number 03. Thus, 989,901 SSN's can be issued for each area number.

The 9-digit number provides the capacity for assigning nearly 1 billion SSN's. To date, approximately 277 million numbers have been issued, leaving about 75 percent still available. Only Florida has used up its original allotment. Several other States (Arizona, California, and Mississippi), and Puerto Rico are expected to exhaust their original allotment within the next 2 decades. Additional area numbers have been designated for these locations. About 5-7 million new numbers are issued each year, but even at this rate there will be sufficient numbers available for several generations to come.

---

[2] For all practical purposes, the serial numbers are random. The use of numbers from the 2000 and 7000 series for every fifth issuance permits scientific sampling of workers and beneficiaries. For example, see Warren Buckler and Creston Smith, "The Continuous Work History Sample: Description and Contents," **Economic and Demographic Statistics: Selected Papers Given at the 1980 Annual Meeting of the American Statistical Association in Houston, Texas,** November 1980.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

[1] Benefit expenditures from the Federal Hospital Insurance and Supplementary Medical Insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940-82

[In thousands. For explanatory footnotes on programs, see table M-1]

---

[1] Includes auxiliaries or dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Fewer than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

---

[1] Represents contributions of employees, employers, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the Hospital Insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits (see footnote 4).

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for SMI premium payments and, when applicable, recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to Hospital Insurance trust fund for coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Social Security benefit checks are generally scheduled for delivery on the 3rd of the month. However, if the 3rd falls on a Saturday, Sunday, or holiday, the checks are delivered on the last previous businessday. January 3, 1982, was a Sunday, January 2 was a Saturday, and January 1 a holiday—so the checks were delivered on December 31, 1981. Data have been adjusted to include the checks delivered on December 31, 1981, as part of the January 1982 data. Thus the total amounts for 1981 and 1982 each reflect 12 months of benefit payments and are comparable to figures for other calendar years.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under sec. 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all four Social Security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

---

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

[4] Represents amount before final rounding of benefits.

**Table M-10.**—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82

[Data contain some duplication arising from dual entitlement; see the **1980 Annual Statistical Supplement**, p. 9]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940-82

---

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 19[illegible], disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Represents amount before final rounding of benefits.

---

[1] Includes from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 18.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available

[5] Represents amount before final rounding of benefits.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–82

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2] [3] | Children [4] | Widows and widowers [2] [5] | Children [4] | Widowed mothers [6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | Average benefits in current-payment status at end of period | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $20.28 | $12.22 | $19.61 | $13.09 | ... | ... | ... | ... |
| 1950 | 43.86 | 23.60 | 17.05 | 36.54 | 28.43 | 34.24 | 36.69 | ... | ... | ... | ... |
| 1960 | 74.04 | 38.72 | 28.25 | 57.68 | 51.37 | 59.29 | 60.31 | $89.31 | $34.41 | $30.21 | ... |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[7] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[10] Represents amount before final rounding of benefits.

**Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and type of benefit, 1940-82**

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement**, p. 9]

---

[1] At the end of 1980 an estimated 40,000 railroad retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their railroad retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

**Table M-15.**—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940–82

| Period | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |

| June [8] | 154,209 | 80,561 | 18,837 | 29,618 | 3,313 | 21,853 | 17 | 10 |
| July | 274,327 | 137,972 | 32,741 | 53,733 | 7,538 | 42,252 | 52 | 39 |

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards includes only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–82

[Numbers in thousands]

| Period | Retired workers | | | Wives and husbands | | |

---

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because earnings of the beneficiary or the worker on whose account benefits are paid exceed the earnings test amount; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] The June awards include only those with the new benefit rates.

[5] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |
|---|---|---|---|---|
| 1957 | 178,802 | 178,802 | ... | ... |
| 1958 | 162,566 | 131,382 | 12,920 | 18,264 |
| 1959 | 310,765 | 177,811 | 54,299 | 78,655 |
| 1960 | 366,302 | 207,805 | 54,187 | 104,310 |
| 1961 | 546,629 | 279,758 | 77,588 | 189,283 |
| 1962 | 490,200 | 250,634 | 69,212 | 170,354 |
| 1963 | 454,249 | 223,739 | 66,543 | 163,967 |
| 1964 | 412,737 | 207,592 | 59,706 | 145,439 |
| 1965 | 520,298 | 253,499 | 69,183 | 197,616 |

| May [4] | 69,957 | 30,997 | 8,834 | 30,126 |
| June [5] | 29,630 | 14,553 | 3,556 | 11,521 |
| July | 53,768 | 25,351 | 6,588 | 21,829 |

---

[1] Includes, from July 1957 through October 1960, disabled workers aged 50–64; beginning November 1960, includes disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] The June awards include only those with the new benefit rates.

[5] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

**Table M-18.**—Supplemental Security Income: Number of persons receiving federally administered payments and total amount, by reason for eligibility, July 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,927,737 | $782,533 | $632,049 | $150,484 |
| Aged | 1,601,878 | 246,608 | 187,915 | 58,693 |
| Blind | [2] 77,872 | 18,933 | 14,183 | 4,750 |
| Disabled | [3] 2,247,987 | 516,993 | 429,951 | 87,041 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 429,000 persons aged 65 and over.

**Table M-20.**—Supplemental Security Income: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–82

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska and February 1982 data for Minnesota; data not available for May 1982.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

**Table M-27.—Supplemental Security Income: Number of persons receiving State-administered State supplementation only, total amount, and average payment, by reason for eligibility and State, May 1982** [1]

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for mandatory and optional programs in New Hampshire, South Dakota, and Virginia; for optional programs in North Dakota.

[2] Includes data not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska and February 1982 data for Minnesota; data not available for May 1982.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] No persons receiving State supplementation only.

[7] Data not available.

## Table M-28.—Public assistance: Number of recipients and average monthly payments, by program, 1940–80

[Data subject to revision. Except for emergency assistance, excludes vendor payments for medical care and cases receiving only such payment]

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by Supplemental Security Income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and one or both parents or one caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program, and emergency assistance payments, 1945–80

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by Supplemental Security Income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## Table M-30.—Aid to Families with Dependent Children: Number of families and recipients, by State, April–June 1981

| State | April 1981 | | | May 1981 | | | June 1981 | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Recipients | | | Recipients | | | Recipients | |
| | Families | Total | Children | Families | Total | Children | Families | Total | Children |

---

[1] Benefits payable under the black lung program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the U.S. Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] | | Initial claims (weekly average) [4] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [2] | Percent of covered employment [3] | | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | | | |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, Aid to Families with Dependent Children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War II bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

---

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised Consumer Price Index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pp. 7–8.

The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration. The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publication Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

Calendar-year data for each year 1939-48 were published in the **Social Security Yearbooks** and, beginning with the data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949-54 were included in the September **Bulletin**, 1950-55; beginning with 1955 data, the **Supplement** is a separate publication.)

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin.** Price: $29.00 a year in the United States and $36.25 in all other countries; single copies, $4.75 domestic and $5.95 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.50 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget.

Note: Contents of this publication are not copyrighted; any items may be reprinted, but citation of the **Social Security Bulletin** as the source is requested.

[1] Data on sex not collected for child beneficiaries.

## SSI

| Amount paid | | Number of recipients |
|---|---|---|
| $8.4 billion | Federally administered payments (average benefit, December 1981: $182.73) | 4.0 million |
| $6.5 billion | Federal SSI payments (average benefit, December 1981: $160.29) | 3.6 million |
| $1.8 billion | Federally administered State supplementation (average benefit, December 1981: $97.78) | [2] 1.6 million |

## AFDC

| | |
|---|---|
| Total payments for 1980 | $12.5 billion |
| Federal share (from general revenues of the U.S. Treasury) | [3] 6.75 billion |
| State share | [3] 5.75 billion |
| Number of recipients at end of 1980 | 10.8 million |
| Number of families, 1980 | 3.7 million |
| Average number of children per family, 1980 | 2 |
| Average monthly payment per family, 1980 | $280 |

## Medicaid

| | |
|---|---|
| Total benefits paid in 1981 | $27.3 million |
| Number of unduplicated recipients | 22.1 million |

## Medicare [3]

| | Hospital Insurance | Supplementary Medical Insurance |
|---|---|---|
| Total benefits paid in 1981 | $30,342 million | $13,113 million |
| Number of enrollees in July 1981 | 28 million | 28 million |
| Number of beneficiaries reimbursed, 1981 | 7 million | 19 million |
| Average amount per reimbursed beneficiary, 1981 | $4,148 | $703 |

**Administrative costs and costs as a percent of total benefits paid for 1981**

| OASI | DI | HI | SMI |
|---|---|---|---|
| $1,307 million (1.1%) | $436 million (2.5%) | $384 million (1.3%) | $915 million (7.0%) |

## Employment and Income

| | |
|---|---|
| Persons in OASDI covered employment in 1981 | [3] 115.6 million |
| Estimated average total wages in 1981 | [3] $12,600 |
| Federal minimum wage (for 2,080 hours per year), as of January 1982 | $6,968 |
| Poverty level, 1981: | |
| Aged individual | $4,360 |
| Couple, aged head of household | $5,500 |
| Family of four | $9,290 |

Earnings required in 1981 for 1 quarter of coverage (1982 amounts in parenthesis): $310 ($340), up to a maximum of 4 quarters for earnings of $1,240 ($1,360).

Earnings test for 1981 (1982 amounts in parenthesis):

Under age 65—Social Security beneficiaries can earn up to $4,080 ($4,440) annually before benefits are reduced.

Aged 65-71—Social Security beneficiaries can earn up to $5,500 ($6,000) annually before benefits are reduced.

---

[2] Includes 1.2 million persons receiving Federal SSI and State supplementation and 0.4 million persons receiving State supplementation only.

[3] Preliminary estimate.

## General

### Social security and the economy

1. Gross national product and social welfare expenditures under public programs, fiscal years 1929–79 ........ 53
2. Social welfare expenditures under public programs, fiscal years 1929–79 ........ 54
3. Personal income and Social Security payments, 1950–80 ........ 55
4. Labor force and estimated workers covered under social insurance programs, 1939–78 ... 56
5. Total earnings, wages and salaries, and estimated earnings in employment covered by selected social insurance programs, 1946–79 ... 57

### Poverty data

6. Weighted average poverty thresholds for nonfarm families, by size, 1959–8 ........ 59
7. Trends in poverty: Number and percent of persons poor, by age, 1959–79 ........ 60
8. Shares of money income from earnings and other sources of aged and nonaged households, by poverty status, 1979 ........ 61
9. Poverty status and current living arrangements of persons aged 65 or older, 1979 ..... 62
10. Poverty status and work experience of family heads and unrelated individuals, by age and sex, 1979 ........ 63
11. Poverty status of aged households receiving Social Security benefits, 1979 ........ 64

### Interprogram social security data

12. History of Federal minimum wage rates under the Fair Labor Standards Act, 1938–82 ..... 65
13. Social insurance and veterans' programs: Cash benefits and beneficiaries, by risk and program, 1940–79 ........ 66
14. Veterans' programs: Veterans receiving compensation or pension, by type of payment and age, 1940–80 ........ 68
15. Selected social insurance and veterans' programs: Benefits, by State, 1978 ........ 69
16. OASDHI and selected public assistance programs: Average monthly payments in current and 1981 dollars, 1950–81 ........ 70
17. Selected social insurance programs: Source of funds from contributions and transfers, 1965–79 ........ 71
18. Selected social insurance trust funds: Financial operations, 1937–78 ........ 72
19. Unemployment trust fund: Status, 1940–78 .. 73
20. OASDI and SSI: Population aged 65 or older receiving OASDI cash benefits, SSI payments, or both, 1940–80, and rank by State, 1980 ... 74
21. Unemployment insurance: Summary data on State programs, by State, 1980 ........ 75
22. Temporary disability insurance: Selected data on State and railroad programs, 1980 ....... 76
23. Workers' compensation: Coverage, benefits, and costs, 1940–80 ........ 77

### Food stamp program

24. Number of persons participating, value of bonus coupons, and average bonus per person, 1962–81 ........ 78

## Old-Age, Survivors, Disability, and Health Insurance

### Trust funds

25. Old-age and survivors insurance trust fund: Status, 1937–81 ........ 79
26. Disability insurance trust fund: Status, 1957–81 ........ 80
27. Combined OASI and DI trust funds: Status, 1957–81 ........ 81
28. Hospital insurance trust fund: Status, 1966–81 82
29. Supplementary medical insurance trust fund: Status, 1966–81 ........ 83

### Workers

30. Workers, earnings, Social Security numbers issued, and employers reporting taxable wages under OASDHI, 1937–78 ........ 84
31. With taxable earnings: Number and earnings of wage and salary and self-employed workers, 1951-78 ........ 85
32. Farm workers under OASDHI, 1951–77 ..... 86
33. With taxable earnings: Number and median earnings, by type of worker and sex, 1937–78 . 87
34. With taxable earnings (all and 4-quarter): Percent with annual earnings below taxable maximum, by sex, 1937–78 ........ 88
35. With taxable earnings: Number, by age and sex, 1937–78 ........ 89
36. With taxable earnings: Median earnings, by age and sex, 1937–78 ........ 90
37. With taxable wages (all and 4-quarter): Number, by wage interval, 1937–78 ........ 91
38. With taxable earnings (self-employed): Number, by age and sex, 1951-78 ........ 93
39. With earnings credits (self-employed): Number, by earnings-credits interval and sex, 1951-78 ........ 94
40. With taxable earnings: Number, earnings, and contributions, by type of employment and State, 1977 ........ 95
41. Insured: By insured status, 1940–82 ........ 96
42. Insured: By insured status, sex, and age, 1978–82 ........ 97
43. Insured (aged 65 or older): Number eligible for and percent receiving retired-worker benefits, by sex and age, 1941–82 ........ 98
44. Insured (aged 62 or older): Number eligible for and percent receiving retired-worker benefits, by sex and broad age group, 1956–82 ... 99

Table No. — Page No.

92. Disabled workers and dependents: Number and percent, by type of beneficiary and primary insurance amount, 1979 ............. 161
93. Retired workers: Percentage distribution, by monthly benefit amount, age, and sex, 1979 . . 162
94. Disabled workers: Number and percent, by monthly amount and sex, 1979 ............ 164
95. Disabled workers and dependents: Average benefit, by type of beneficiary, 1957–81 ..... 164
96. Disabled workers: Number and monthly amount, by sex, 1957–81 ............... 165
97. Disabled workers: Number, average age, and percent, by age and sex, 1957–79 .......... 166
98. Wives and husbands: Number and monthly amount, by type of beneficiary, 1950–81 .... 167
99. Aged wives: Percent, by monthly amount and age, 1979 ............................ 168
100. Children: Number and monthly amount, by type of child beneficiary, 1940–81 ......... 169
101. Children: Number, by type of child beneficiary and sex of worker, 1950–79 ......... 171
102. Survivors of deceased workers: Average amount, by type of beneficiary, 1940–81 .... 172
103. Survivors of deceased workers: Number and percent, by type of beneficiary and primary insurance amount, 1979.................... 173
104. Mothers and fathers: Number and monthly amount, by type of beneficiary, 1950–79 .... 174
105. Widows and widowers: Number and monthly amount, by basis of entitlement, 1950–81.... 175
106. Widows (nondisabled): Percent, by monthly amount and age, 1979.................. 176
107. Retired-worker, survivor, and disabled-worker families: Number, average primary insurance amount, and average benefit, by family group, 1979 ........................ 177
108. Family groups receiving special minimum benefits: Number and average primary insurance and monthly amounts, 1973–79 .......... 179
109. Disabled-child families: Number, average primary insurance and monthly amounts, by family group, 1979.................... 179
110. Student-child families: Number, average primary insurance and monthly amounts, by family group, 1979.................... 180
111. Retired-worker and disabled-worker families: Percent, by monthly amount, 1979......... 181
112. Survivor families: Percent, by monthly amount, 1979........................ 182

**Benefits withheld and terminated**

113. Withheld for individuals: Number, by reason and type and age of beneficiary, 1979....... 183
114. Withheld for wives and husbands and children: Number, by reason and type of beneficiary, December 1979................. 183
115. Workers' compensation offset for disabled-worker families: Number and average amount before and after offset, 1967–81............ 184
116. Workers' compensation offset for disabled worker families: Number and average amount before and after offset, by type of family, 1979–80 ............................ 185
117. Terminated for individuals: Number, by type of beneficiary, 1940–77 ................. 186
118. Terminated for individuals: Number, by reason and type of beneficiary, 1977 .......... 187
119. Terminated for wives and husbands and children: Number, by reason and type of beneficiary, 1977......................... 187

**State monthly benefit data**

120. Cash benefits paid: Total, by program, 1980–81 ............................ 188
121. Benefits in current-payment status: Number, by type of beneficiary, 1980 .............. 190
122. Benefits in current-payment status: Amount, by type of beneficiary, 1980 .............. 191
123. Benefits in current-payment status: Number, by age, race, and sex, 1980 ............... 192
124. Retired-worker benefits in current-payment status: Number and percent receiving, by monthly amount, ranked by State average, 1980 ............................... 193
125. Children's benefits in current-payment status: Number, by type of child beneficiary and basis of entitlement, 1980 .................. 194
126. Retired-worker benefits in current-payment status: Number and average amount, 1940–80 195
127. Widow and widower benefits in current-payment status: Number and percent receiving, by monthly amount, ranked by State average, 1980 ............................... 196
128. Disabled-worker benefits in current-payment status: Number and percent receiving, by monthly amount, ranked by State average, 1980 ............................... 197

**Beneficiaries residing abroad**

129. Benefits in current-payment status: Number and monthly amount, by country or continent and type of beneficiary, 1980 ............. 198

**Worker disability awards**

130. Number and percent, by selected causes of disability, 1957–77 ..................... 202
131. Diagnostic group: Number and Percent, by sex and race, 1977...................... 203
132. Diagnostic group: Number and percent, by age, 1977 ........................... 203
133. Diagnostic group: Number and percent, by industry division, 1977 ................. 204

**Medicare benefits**

134. Hospital and supplementary medical insurance: Number of enrollees aged 65 or older, by age, sex, race, and census region, 1966–80 ............................ 205

Table No. — Page No.

135. Hospital and supplementary medical insurance: Number of disabled persons and persons with end-stage renal disease under age 65, by age, sex, race, and census region, 1973–80 ... 206
136. Hospital insurance: Number of enrollees, by State, 1966–80 ... 207
137. Hospital insurance: Number of bills approved for payment and amount reimbursed, by type of benefit and type of beneficiary, 1966–81 .. 208
138. Hospital insurance: Number of inpatient short-stay hospital care bills, covered days, total charges, and amount reimbursed, by type of beneficiary, 1966–81 ... 209
139. Hospital insurance: Average covered charge per covered day of care in short-stay hospitals and skilled-nursing facilities, by State, 1974–80 ... 210
140. Supplementary medical insurance: Number of reimbursed bills, charges, and amount reimbursed, by type of service and type of beneficiary, 1966–80 ... 211
141. Supplementary medical insurance: Number of claims received by carriers and assignment rates, 1969–81 ... 212
142. Supplementary medical insurance: Reasonable charge determination for claims assigned and unassigned, 1971–81 ... 212
143. Hospital insurance: Number of inpatient hospital and skilled-nursing facility admissions and rates per 1,000 enrollees, by State and type of beneficiary, 1979 ... 213
144. Hospital insurance: Number of inpatient hospital and skilled-nursing facility admissions and rates per 1,000 enrollees, by type of beneficiary, 1966–79 ... 214
145. Hospital and supplementary medical insurance: Number of facilities and beds for participating hospitals, skilled-nursing facilities, home health agencies, and independent laboratories, 1967–80 ... 215
146. Hospital insurance: Number of participating hospitals and beds per 1,000 enrollees, by State, 1980 ... 216
147. Hospital and supplementary medical insurance: Number of participating skilled-nursing facilities, home health agencies, independent laboratories, and end-stage renal disease facilities, by State, 1980 ... 217
148. Hospital and supplementary medical insurance: Aged persons enrolled, served, and amount reimbursed, by type of service, 1967–79 ... 218
149. Hospital and supplementary medical insurance: Disabled persons enrolled, served, and amount reimbursed, by type of service, 1974–79 ... 219

**Medicaid benefits**

150. Unduplicated number of Medicaid recipients, by type of medical service, fiscal years 1972–80 ... 220
151. Medicaid vendor payments: Amount and percentage change in payments, by type of medical service, fiscal years 1972–80 ... 220
152. Unduplicated number of Medicaid recipients, by eligibility category, fiscal years 1972–80 .. 221
153. Medicaid vendor payments: Amounts and percentage change in payments, by eligibility category, fiscal years 1972–80 ... 221

**Supplemental Security Income**

154. Number receiving federally administered payments and total amount, by reason for eligibility and State, 1981 ... 222
155. Number receiving State-administered supplementation and total amount, by reason for eligibility and State, 1981 ... 223
156. Number receiving federally administered payments and average amount, by reason for eligibility and type of payment, December 1981 . 223
157. Number of persons receiving payments, by type and reason for eligibility, 1974–80 ..... 224
158. Total amount of payments, by type and reason for eligibility, 1974–80 ... 225
159. Average monthly amount of payments, by type and reason for eligibility, 1974–80 ..... 226
160. Number of **all persons** receiving federally administered payments and average amount, by State, December 1981 ... 227
161. Number of **aged** receiving federally administered payments and average amount, by State, December 1981 ... 228
162. Number of **blind** receiving federally administered payments and average amount, by State, December 1981 ... 229
163. Number of **disabled** receiving federally administered payments and average amount, by State, December 1981 ... 230
164. Number and percent receiving federally administered payments, by reason for eligibility and living arrangements, December 1981 .... 231
165. Number of adult units and children receiving federally administered payments and average amount, by type of payment and reason for eligibility, December 1981 ... 231
166. Total amount, Federal SSI payments, and State supplementation, by State, 1981 ...... 232
167. Number of blind and disabled children receiving federally administered payments, by State, December 1981 ... 232
168. Number and percent of persons in concurrent receipt of federally administered payments and other income and average amount of other income, by reason for eligibility and source of income, December 1981 ... 233
169. Percent of persons in concurrent receipt of federally administered payments and Social Security benefits and average amount of Social Security benefits, by reason for eligibility and State, December 1981 ... 234
170. Number and percent receiving federally administered payments and OASDI benefits, by reason for SSI eligibility and type of OASDI benefit and beneficiary, December 1981 ..... 235
171. Number and percent of **all persons** receiving federally administered payments, by reason for eligibility, sex, and race, December 1981 .. 236

Table No. — Page No.

172. Number and percent of **all adults** receiving federally administered payments, by reason for eligibility and age, December 1981 ...... 236
173. Number and percent of **blind** and **disabled children** receiving federally administered payments, by age, December 1980–81 .......... 236
174. Number and percent of persons receiving federally administered payments with **representative payees**, by reason for eligibility, December 1980 .......................... 236
175. Number and percent of **individuals** receiving Federal SSI payments, by reason for eligibility and monthly amount, December 1980 ...... 237
176. Number and percent of **couples** receiving Federal SSI payments, by reason for eligibility and monthly amount, December 1980 ...... 237
177. Number of persons receiving Federal SSI and federally or State-administered payments, December 1981 .......................... 237
178. Number and percent of blind and disabled adults and children initially awarded federally administered payments, by basis for adjudication and diagnostic group, 1977 ........... 238
179. Number and percent of blind and disabled adults and children initially awarded federally administered payments, by diagnostic group, 1977 .......................... 238

**Low-Income Energy Assistance**

180. Number of households receiving heating assistance, by type of payment and number of persons in households assisted, by State, fiscal year 1981 .......................... 239
181. Percent of households receiving heating assistance, by annual income and State, fiscal year 1981 .......................... 240
182. Percent of households receiving heating assistance, by primary heating fuel and State, fiscal year 1981 .......................... 241
183. Percent of households receiving heating assistance, by specific target group characteristics and State, fiscal year 1981 .......................... 242
184. Number of households and persons receiving medically necessary cooling assistance, by State and percent of households receiving assistance, by annual income and State, fiscal year 1981 .......................... 243
185. Total Federal expenditures for administration and assistance, by State, fiscal year 1981 .... 244

**Black lung benefits**

186. Currently payable to miners, widows, and dependents: Number and amount, 1970–81 .... 245
187. Currently payable to miners, widows, and dependents: Number and amount, by State, 1981 .......................... 246

**Public assistance**

188. AFDC and emergency assistance: Average monthly number of recipients, total amount of cash payments, and average monthly payment, 1936–80 .......................... 247
189. OAA, AB, and APTD: Average monthly number of recipients, total amount of cash payments, and average monthly payment, 1936–80 .......................... 248
190. GA: Average monthly number of recipients, total amount of cash payments, and average monthly payment, 1936–80 .............. 249
191. AFDC and emergency assistance: Average monthly number of families and recipients of cash payments and total amount of payments, by State, 1980 .......................... 250

# Old-Age, Survivors, Disability, and Health Insurance Program, 1981

The Old-Age, Survivors, Disability, and Health Insurance (OASDHI) program provides monthly benefits to retired and disabled workers and their spouses and children and to survivors of insured workers. It also provides Health Insurance benefits for persons aged 65 and over and, starting July 1973, for the disabled under age 65. Old-age retirement benefits were provided by the original Social Security Act of 1935, benefits for spouses and children and survivors by the 1939 amendments, benefits for the disabled by the 1956 amendments, and benefits for the spouses and children of disabled workers by the 1958 amendments. The 1965 amendments initiated the Health Insurance program, generally known as Medicare.

A brief description of provisions at the end of 1980, including definitions of terms applicable to data in the **Supplement** tables, is presented below and in the Monthly Benefits and the Medicare and Medicaid sections that follow. Included in this section are provisions and terms that apply to both the monthly benefit and the Health Insurance parts of the OASDHI program.

A person builds protection under the OASDHI program through working in employment covered under various Social Security related legislation. Coverage is in general compulsory. Contributions on wage and salary workers' earnings up to a statutory maximum each year are withheld and matched by employers. Self-employed persons pay contributions on their annual earnings up to the same maximum as employees, but at a higher rate. Contributions of workers with more than one employer are withheld and matched up to the annual maximum by each employer. Self-employment earnings of wage and salary workers are taxable only up to the amount by which their wages are less than the annual maximum taxable amount. Premiums are paid on a voluntary basis for certain portions of the Medicare program. All contributions and premiums are credited to the various trust funds that are the sources of payments for: (1) Monthly benefits when the worker retires, dies, or becomes disabled; (2) service benefits when eligible aged and disabled individuals incur hospital or medical expenses; (3) vocational rehabilitation services when disability benefits are being received; and (4) administrative expenses for each program. No funds are disbursed for any other purpose.

## Monthly Benefits

Monthly benefits are paid as a matter of earned right to workers who gain insured status and to their eligible spouses and children and survivors. Fully insured status qualifies a worker and family for almost all benefit types on the basis of Social Security earnings credits. A worker who dies without being fully insured may be currently insured, and his/her children and their widowed mother or father would thus qualify for benefits. "Insured in event of disability" status is required to qualify for a disabled-worker benefit or to establish a period of disability. A lump-sum death payment may be also payable on the death of a fully or currently insured worker. Certain persons born before January 2, 1900, who do not meet the fully insured-status requirement can qualify for small, fixed-rate benefits under special transitional provisions.

Benefits are related to past earnings with two exceptions: (1) Fixed-rate benefits payable to certain persons born before January 2, 1900, and (2) benefits based on the "special minimum" for persons with low earnings but long attachment to the labor force. The amount of a monthly benefit award is determined by first computing an insured worker's average monthly wage (AMW) or—in the case of most workers who attain age 62, become disabled, or die after 1978—average indexed monthly earnings (AIME). The AMW or AIME is then linked (by a table in the law and by a formula, respectively) to the monthly benefit payable at age 65—called the primary insurance amount (PIA). Benefits for spouses and children and survivors are calculated as a percentage of the insured worker's PIA. The calculated amounts are subject to minimum and maximum limits stated in the law. Benefits payable to workers, spouses, widows, and widowers who choose to elect benefits before age 65 are subject to an actuarial reduction.

Benefits are subject to an earnings or retirement test, under which part or all of benefit payments are withheld when earnings of a beneficiary under age 72 exceed the amount specified in the law (see "Earnings test," page 17).

Monthly benefits are financed through contributions from wages and salaries and self-employment income (except for transfer of Federal general revenues to finance military and other gratuitous wage credits and "special age-72" benefits). This program is administered by the Federal Government.

### Special Provisions for Railroad Retirement Beneficiaries

At the end of 1980, an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons received their Social Security benefit as part of their Railroad Retirement annuity and are not included in the OASDI tabulations. Of these beneficiaries, an estimated 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

The Railroad Retirement Act of 1974, effective January 1, 1975, provided that the regular annuity for employees with 10 or more years of railroad service who retired after December 31, 1974, will consist of two components:

> Tier 1—A basic Social Security level component equivalent to what would be paid under the Social Security Act on the basis of the employee's combined railroad and nonrailroad service, reduced by the amount of any monthly cash benefit under OASDI actually paid on the basis of nonrailroad work; and
>
> Tier 2—A staff level component payable over and above the Social Security equivalent, on the basis of a formula applicable only to railroad service.

Since the receipt of a Social Security benefit would reduce the Railroad Retirement benefit by a like amount, many of these retirees have not applied for a Social Security benefit. The number of such persons is estimated to have grown slowly at first—1,000 in 1977, 2,000 in 1978, 4,000 in 1979—and to have reached its 1980 level of 40,000 as Railroad Retirement beneficiaries became aware of the provision.

# Medicare Program—Health Insurance Benefits for the Aged and Disabled, 1981

The Medicare program, enacted on July 30, 1965, as Title XVIII "Health Insurance for the Aged" of the Social Security Act, became effective on July 1, 1966. It consists of two separate but coordinated programs—Hospital Insurance (HI) and Supplementary Medical Insurance (SMI). In 1972, Public Law 92-603 made major changes in the program provisions. In particular, protection was extended, effective July 1, 1973, to disabled persons entitled because of their disability to monthly cash benefits under the Social Security or Railroad Retirement programs and to certain individuals with end-stage renal disease. Title XVIII thus became Health Insurance for the Aged and Disabled. The Omnibus Reconciliation Act of 1980 (Public Law 96-499) liberalized home health benefits under Medicare. For deductible and coinsurance amounts, see page 24.

## HI Program

This program enrolls for benefits all persons aged 65 and over who are entitled to monthly cash benefits under the OASDI or Railroad Retirement programs (whether retired or not), as well as disabled persons under age 65 who have been entitled to disability cash benefits for at least 24 months and insured workers (and their spouses and children) with end-stage renal disease who require renal dialysis or a kidney transplant. (The Social Security Amendments of 1980 (P.L. 96-265) removed the consecutive months requirement, effective December 1, 1980. Months from previous periods of disability benefit entitlement may be counted in determining month qualifying period requirement is met provided the current onset begins within certain time limits following the earlier period of entitlement.) Also eligible for HI enrollment under transitional provisions are persons aged 65 and over with specified amounts of earnings credits less than that required for cash benefit eligibility. (Not eligible under the transitional provisions are retired Federal employees covered by the Federal Employees' Health Benefits Act of 1959 or aliens admitted for permanent residence unless they have 5 consecutive years of residence and the required covered quarters under these provisions.) Since July 1973, most persons aged 65 or older and otherwise ineligible for Hospital Insurance have been permitted to enroll voluntarily and pay a monthly premium for HI protection if they are enrolled for SMI.

The HI program pays for part of the costs of inpatient hospital care and related health care provided by skilled-nursing facilities (SNF's) and home health agencies (HHA's) following a period of hospitalization. The first 60 days of covered services in a benefit period in a participating hospital are covered essentially in full after a specified deductible is paid (see page 24). For each of the next 30 covered days in a benefit period the patient pays a coinsurance amount (equal to one-fourth of the deductible). Each HI beneficiary also has a "lifetime reserve" of 60 additional hospital days that can be used at his option when he has exhausted the covered 90 days within a benefit period. Lifetime reserve days, once used, are not reusable. HI benefits include reimbursement for inpatient tuberculosis and psychiatric hospital services, with a lifetime limit of 190 days of care in a psychiatric hospital. HI also pays for emergency inpatient care in a nonparticipating hospital.

The program pays part of the costs of all covered inpatient services in participating SNF's for up to 100 days in a benefit period after a hospital stay of 3 or more consecutive days. The cost of the first 20 days is covered in full. The patient pays a coinsurance amount equal to one-eighth of the HI deductible for each of the remaining 80 covered days. Effective July 1, 1981, the Omnibus Reconciliation Act of 1980 provides for coverage under Medicare of unlimited home health visits. It also eliminates the 3-day prior-hospitalization requirement for home health services under the Hospital Insurance program (Part A of Medicare) the $60 deductible for home health services under the Supplementary Medical Insurance program (Part B), and permits proprietary home health agencies to participate in States not having licensure laws.

The program is financed through a separate trust fund to which employees, employers, and self-employed persons contribute through a payroll or earnings tax (see page 29). Under a special provision, the HI trust fund is reimbursed from general revenues for the cost of providing HI coverage for aged persons not entitled to OASDI or Railroad Retirement cash benefits (see table 28, page 82).

Under HI, each hospital nominates an intermediary to act as its link with the Health Care Financing Administration. The intermediaries review and pay hospital claims for the costs of providing care to the beneficiaries, drawing against balances established by the Health Care Financing Administration. Certain hospital claims are paid directly by the Health Care Financing Administration. All payments to providers for covered items and services are based on "reasonable cost" determinations made by the intermediaries.

## SMI Program

All persons entitled to coverage under HI are eligible to enroll in the SMI program on a voluntary basis by paying a monthly premium. Persons who lack the required earnings credits for HI eligibility (except the aliens mentioned above) may also buy SMI protection. State welfare agencies may "buy in" for public assistance recipients and pay the premiums in their behalf.

The SMI program pays 80 percent of the charges allowed for medical and related health services and supplies furnished by physicians (or others in connection with physicians' services), and by hospital outpatient facilities and home health agencies, after the beneficiary has met an established deductible amount (see page 24). Radiology and pathology services furnished by physicians to hospital inpatients are covered without any deductible or coinsurance payments.

SMI is financed through a separate trust fund, in which are placed the premiums paid by enrollees and a matching amount by the Federal Government from general revenues (see page 29). Benefits and administrative costs are paid from this trust fund.

The Health Care Financing Administration contracts with "carriers" to process the claims for payment for covered services under SMI. The carriers determine the amounts to be paid, based on "reasonable charges" for the services.

# History of the Provisions of the Old-Age, Survivors, Disability, and Health Insurance Program*

## Employment Covered

*[Unless otherwise noted, coverage begins on the first of January following the passage of the Act: for the self-employed, coverage begins at the beginning of the taxable year following the passage of the Act]*

### Compulsory

| Act | |
|---|---|
| 1935 | All workers in commerce and industry (except railroads) under age 65 in continential United States, Alaska, and Hawaii. (Covered after 1936.) |
| 1939 | Age restriction eliminated. |
| 1946 | Railroad and Social Security earnings combined to determine eligibility for and amount of survivor benefits. |
| 1950 | Regularly employed farm and domestic workers. Nonfarm self-employed (except members of professional groups). Federal civilian employees not under a Federal retirement system. Americans employed outside United States by American employers. Workers in Puerto Rico and Virgin Islands. |
| 1951 | Railroad workers with less than 10 years of service, for all benefits. (After October 1951, coverage is retroactive to 1937.) |
| 1954 | Farm self-employed. Professional self-employed except lawyers, dentists, physicians, and members of other medical groups (taxable year ending after 1954). Additional regularly employed farm and domestic workers. Homeworkers. |
| 1956 | Members of the uniformed services. Remainder of professional self-employed except physicians (taxable year ending after 1955). Farm landlords who materially participate in farm operations. |
| 1960 | Americans employed in United States by foreign governments or international organizations. Parents working for children (except domestic or casual labor). Workers in Guam and American Samoa. |
| 1965 | Interns. Self-employed physicians (taxable year ending on or after Dec. 31, 1965). Tips for employee tax only. |
| 1967 | Ministers and members of religious orders not under a vow of poverty (unless exemption is claimed on grounds of conscience or religious principles). Taxable year ending after 1967. |

### Elective by Employer

| Act | |
|---|---|
| 1950 | State and local government employees not under a State or local government retirement system. |
| 1954 | Americans employed outside United States by a foreign subsidiary of an American employer. |
| 1972b | Members of a religious order who are subject to a vow of poverty. Retroactivity allowed for 5 years but not earlier than Jan. 1, 1968. |

### Elective by Employer and Employee

| Act | |
|---|---|
| 1950 | Employees (other than ministers) of nonprofit organizations (employees voting against coverage are not covered, new employees are covered). |
| 1954 | State and local government employees (except firemen and policemen) under State or local government retirement system. |
| 1956 | Firemen and policemen in designated States. State and local government employees under State or local government retirement system in designated States may be divided into two systems, one excluding employees not desiring coverage (new employees covered). |
| 1967 | Firemen under State or local government retirement system. |

### Elective by Individual

| Act | |
|---|---|
| 1954 | Ministers and members of religious orders not under a vow of poverty. |
| 1965 | Members of certain religious sects may obtain exemptions from self-employment coverage (retroactive to 1951). |
| 1967 | Ministers and members of religious orders not under a vow of poverty placed under compulsory coverage, but they could choose to be exempt on grounds of conscience or religious principles. |
| 1977 | Ministers and members of religious orders who filed an application for exemption from coverage may revoke the exemption if the revocation is filed before the due date of the individual's Federal income tax return for the first taxable year after Dec. 20, 1977. |

### International Agreements

| Act | |
|---|---|
| 1977 | Individuals with sufficient periods of coverage under the Social Security system of any foreign country and that of the United States (effective date of agreement establishing totalization arrangements between the two Nations). |

---

*The word "Act" throughout represents legislation enacted *in the year shown* (except that the 1967 Act was signed Jan. 2, 1968). 1972a denotes legislation of July 1; 1972b denotes legislation of October 30; 1973a denotes legislation of July 9; 1973b denotes legislation of December 31; 1981a denotes legislation of August 13; 1981b denotes legislation of December 29.

### Noncontributory Wage Credits

| Act | |
|---|---|
| 1946 | Fully insured status and average monthly wage of $160 for World War II veterans who died within 3 years after discharge. |
| 1950 | Wage credits of $160 per month of military service during World War II (Sept. 16, 1940, to July 24, 1947). |
| 1952 | Same military wage credits to Dec. 31, 1953. |
| 1953 | Same military wage credits to June 30, 1955. |
| 1955 | Same military wage credits to Mar. 31, 1956. |
| 1956 | Same military wage credits to Dec. 31, 1956. |
| 1967 | For uniformed services, wage credits of $100 for each $100 (or fraction thereof) of basic pay not in excess of $300 per quarter, beginning 1968. |
| 1972b | For uniformed services, wage credits of $300 per calendar quarter of service after 1956. (Supersedes 1967 provision.) |
| | For U.S. citizens of Japanese ancestry, wage credits for the period they were interned by the U.S. Government during World War II (Dec. 7, 1941, to Dec. 31, 1946) and were aged 18 and over. |

## Insured Status (Entitlement to Benefits)

### Quarter of Coverage (QC)

| Act | |
|---|---|
| 1939 | Calendar quarter in which $50 of wages is earned. Four QC's are credited for covered earnings equal to maximum limitation for the year. |
| 1946 | Calendar quarter in which $50 of wages is paid. |
| 1950 | Calendar quarter credited with $100 of self-employment income (reported annually). |
| 1954 | Calendar quarter credited with $100 of agricultural wages (reported annually). |
| 1977 | Calendar quarters of coverage (up to 4) for each $250 of annual earnings, *effective Jan. 1, 1978 (effective Jan. 1, 1979,* dollar measure subject to automatic increase): $260, *effective Jan. 1, 1979*; $290, *effective Jan. 1, 1980*; $310, *effective Jan. 1, 1981*; $340, *effective Jan. 1, 1982.* |

### Disability Definition

| Act | |
|---|---|
| 1954 | Inability to engage in substantial gainful activity because of any medically determinable permanent physical or mental impairment. |
| 1965 | Disability lasting at least 12 months. For blind aged 55-64, inability to engage in usual occupation. |
| 1967 | Disability that precludes engagement in any substantial gainful work existing in the national economy. For surviving spouse, disability precluding any gainful activity. |

### Period of Disability

| Act | |
|---|---|
| 1954 | Continuous period of at least 6 months of disability as defined above or of blindness. |
| 1972b | At least 5 months of disability. |

### Fully Insured

| Act | |
|---|---|
| 1935 | Cumulative wages of $2,000 and employment in each of 5 years after 1936 and before attainment of age 65. |
| 1939 | QC equal to one-half the quarters elapsed after 1936 (or quarter in which attained age 21) and before quarter of death or attainment of age 65. Minimum 6 QC, maximum 40 QC. |
| 1950 | Elapsed period measured after 1950 (QC earned at any time are used). |
| 1954 | Period of disability excluded from elapsed period. Alternatively, QC earned in all quarters after 1954 and before quarter in which age 65 attained (minimum 6 QC). |
| 1956 | Elapsed period measured to age 62 for women. Alternatively, QC earned in all except 4 quarters after 1954 and before quarter in which age 65 attained (62 for women). |
| 1960 | QC reduced to 1/3 the elapsed quarters. |
| 1961 | QC equal to years elapsed after 1950 (or year age 21 attained) and before year of death or age 65 (62 for women). |
| 1972b | Elapsed period for men reaching age 62 after 1972, measured to age 62 or to 1975, if later. |

### Currently Insured

| Act | |
|---|---|
| 1939 | 6 QC earned in 12 quarters before quarter of death. |
| 1946 | 6 QC earned in preceding 13 quarters, including quarter of death. |
| 1950 | Including quarter of retirement added. |
| 1954 | Including quarter of disablement added. |

### Disability Insured

| Act | |
|---|---|
| 1954 | 20 QC earned in last 40 quarters, including quarter of disablement, and currently insured. |
| 1956 | Fully insured requirement added. |
| 1958 | Currently insured requirement eliminated. |
| 1960 | Alternatively, 20 QC earned before quarter of disablement (not necessarily in last 40 quarters) but QC earned in all quarters after 1950, with minimum of 6 such QC. |
| 1965 | Alternatively for blind under age 31, QC earned in one-half the quarters elapsed after age 21, with minimum of 6 such QC. For blind under age 24, 6 QC earned in preceding 3 years. |

**Act**

1967 For all disabled under age 31, same alternative.

1972b For blind, requirement for recent QC eliminated.

### Transitional Insured

1965 Same as fully insured, but minimum reduced to 3 QC.

### Requirement for Special Monthly Benefit

1966 3 QC for each year elapsed after 1966 and before attainment of age 72. (No QC if aged 72 before 1968.)

### Entitlement to Hospital Insurance Benefits

1965 Any individual aged 65 and over entitled to monthly benefits under the Social Security or Railroad Retirement program, or aged 65 before 1968, or 3 QC for each year after 1965 and before attainment of age 65.

1967 Or 3 QC for each year after 1966 and before attainment of age 65.

1972b Any disabled individual, under age 65, entitled to monthly disability benefits for 24 consecutive months under the Social Security or Railroad Retirement program (excludes spouses and children of disabled individuals). Any individual under age 65 who has end-stage renal disease and who is either fully or currently insured, or is entitled to monthly benefits under the Social Security or Railroad Retirement program or is the spouse or dependent child of such an insured individual or beneficiary. Entitlement begins on the first of the third month following the initiation of a course of renal dialysis and ends with the 12th month following the month in which either the dialysis terminates or the individual has a renal transplant.

Any individual aged 65 and over enrolled in the supplementary Medical Insurance program who is not otherwise entitled to Hospital Insurance benefits, upon voluntary participation with payment of hospital premium.

1980 Any individual who would be entitled to monthly benefits under the Social Security or Railroad Retirement program if application were made.

Any disabled individual under age 65 entitled to monthly disability benefits for a total of 24 months, not necessarily consecutive, under the Social Security or Railroad Retirement program.

Medicare coverage extended for up to 36 months for disabled individuals whose disability continues, but whose monthly benefits ceased because they engaged in substantial gainful activity.

Second waiting period eliminated if a former disabled worker beneficiary becomes entitled again within 5 years (7 years for disabled widows and widowers and disabled children aged 18 or older.)

### Entitlement to Supplementary Medical Insurance Benefits

1965 Any U.S. resident (citizens, or lawfully admitted alien with 5 years continuous residence) aged 65 and over or any individual entitled to Hospital Insurance benefits upon voluntary participation with payment of SMI premium.

1972b Any individual under age 65 entitled to Hospital Insurance benefits, upon voluntary participation with payment of SMI premium.

## Benefit Computation

**Act**

### Average Monthly Wage (AMW)

1939 Computed using creditable earnings after 1936 and before year of death or retirement divided by months after 1936 and before quarter of death or retirement, excluding months before age 22 in quarters not QC.

1950 Computed using creditable earnings after 1950 (or year aged 21) and before year of death, year of retirement or subsequent year, or year age 65 attained if then insured, divided by number of months in those years.

1954 Earnings and months in 4 years may be excluded in all cases; in 5 years if worker has 20 QC. Period of disability may be excluded.

1956 Earnings and months in 5 years may be excluded in all cases. Computation period may end at age 62 for women then insured.

1960 Earnings may be used for any year after 1950 and before year of retirement but including year of death, with the number of years equal to the years elapsed after 1955 (or year age 26 attained) and before year of death or age 65 attained (62 for women).

Same method may be used for earnings after 1936 and years elapsed after 1941.

1972b Number of years for men reaching age 62 after 1972, measured to age 62 or to 1975, if later.

1977 For workers who attain age 62, become disabled, or die after 1978, excludes earnings in year of attainment of age 62 and later, computed using creditable earnings after 1936.

For workers who attain age 62 after 1978 and before 1984, excludes earnings in year of attainment of age 62 and later, computed using creditable earnings after 1950.

### Average Indexed Monthly Earnings (AIME)

1977 For workers who attain age 62, become disabled, or die after 1978, AIME is computed by using indexed earnings after 1950 for the same computation period applicable in calculating the AMW. Indexed earnings for a given year equal actual creditable earnings multiplied by average wages for the second year before worker attains age 62, becomes disabled, or dies, divided by average wages in a given year, except that for years after the second year before the worker attains age 62, becomes disabled, or dies, indexed earnings equal actual creditable earnings.

1980 For disabled workers, the number of years of earnings used equals the number of years elapsed after 1950 (or year aged 21, if later) and before year of disability, minus dropout years equal to one-fifth of the number of elapsed years rounded to the next lower integer (to a maximum of 5 dropout years). However, the number of years of earnings used is at least 2. *Effective for initial entitlement after June 1980.*

Disabled workers who receive less than 3 dropout years under the one-fifth rule may be credited with additional dropout years based on child care, up to a total of three dropout years. (To receive this credit, a worker must have had no earnings in that year and have been living with a child under age 3.) However, the number of years of earnings used is at least 2. *Effective for July 1981.*

### Primary Insurance Amount (PIA)*

[Formula applies to cumulative creditable wages]

1935 1/2 of 1% of first $3,000 plus 1/12 of 1% of next $42,000 plus 1/24 of 1% of next $84,000. *Effective for January 1942* but never applicable.

[Formula applies to AMW (limited to $250) computed for period after 1936]

1939 40% of first $50 plus 10% of next $200. Total increased by 1% for each year with at least $200 of creditable wages. *Effective for January 1940.*

1950 Modified so that increment years may not exceed 14, with benefit amount increased under *conversion table* in the law. *Effective for September 1950.*

1967 Modified to distribute total creditable wages in years 1937–50 over 9–14 years, with 14 increment years assumed.

1977 Modified to distribute total creditable wages in years 1937–50 over 1–14 years, with 4–14 increment years assumed. Table in the Act (as deemed effective for December 1978) relating PIB's to PIA's frozen for workers who attain age 62, become disabled, or die after 1978. Cost-of-living adjustments applicable in year worker attained age 62 and after, or if earlier, year worker became disabled or died applied to December 1978 PIA's. *Effective for June 1979*, increase of 9.9% in *current* benefit levels. *Effective for June 1980*, increase of 14.3% in *current* benefit levels. *Effective for June 1981*, increase of 11.2% in *current* benefit levels. *Effective for June 1982*, increase of 7.4% in *current* benefit levels.

[Formula applies to AMW computed for period after 1950]

1950 50% of first $100 plus 15% of next $200. *Effective for April 1952.* Increase of about 77% in benefit level—from 100% at the lowest level to 50% at the highest level.

1952 55% of first $100 plus 15% of next $200. *Effective for September 1952*, increase of 12 1/2%, but not less than $5 in *current* benefit levels.

1954 55% of first $110 plus 20% of next $240. *Effective for September 1954*, increase of at least $5 (*current* benefit levels increased by approximately 13%).

[Underlying formula appearing (or deemed to appear) in table in the Act]

1958 58.85% of first $110 plus 21.40% of next $290. *Effective for January 1959*, increase of the greater of 7% or $3 in benefit level.

1965 62.97% of first $110 plus 22.90% of next $290 plus 21.40% of next $150. *Effective for January 1965*, increase of the greater of 7% or $4 in benefit level.

1967 71.16% of first $110 plus 25.88% of next $290 plus 24.18% of next $150 plus 28.43% of next $100. *Effective for February 1968*, increase of approximately 13% in benefit level.

1969 81.83% of first $110 plus 29.76% of next $290 plus 27.81% of next $150 plus 32.69% of next $100. *Effective for January 1970*, increase of approximately 15% in benefit level.

1971 90.01% of first $110 plus 32.74% of next $290 plus 30.59% of next $150 plus 35.96% of next $100 plus 20% of next $100. *Effective for January 1971*, increase of 10% in benefit level.

1972a 108.01% of first $110 plus 39.29% of next $290 plus 36.71% of next $150 plus 43.15% of next $100 plus 24% of next $100 plus 20% of next $250. *Effective for September 1972*, increase of 20% in benefit level. (Provision for future automatic "cost-of-living" increases.)

1973a 114.38% of first $110 plus 41.61% of next $290 plus 38.88% of next $150 plus 45.70% of next $100 plus 25.42% of next $100 plus 21.18% of next $250 plus 20% of next $50. *Effective for June 1974 through December 1974 but never applicable.* Increase of 5.9% in benefit level eliminated by 1973b legislation.

1973b 119.89% of first $110 plus 43.61% of next $290 plus 40.75% of next $150 plus 47.90% of next $100 plus 26.64% of next $100 plus 22.20% of next $250 plus 20% of next $100. Increase of 11% in 1972a benefit levels, *effective in 2 steps: 7%, for March-May 1974; 4% additional, for June 1974.* (Beginning June 1975, subject to automatic "cost-of-living" increase, under modification of 1972 provision.) Plus 20% of next $75, *effective for January 1975.*

129.48% of first $110 plus 47.10% of next $290 plus 44.01% of next $150 plus 51.73% of next $100 plus 28.77% of next $100 plus 23.98% of next $250 plus 21.60% of next $175. *Effective for June 1975*, increase of 8% in benefit level. Plus 20% of next $100, *effective for January 1976.*

---

*Before 1951, primary insurance benefit (PIB).

**Act**

137.77% of first $110 plus 50.10% of next $290 plus 46.82% of next $150 plus 55.05% of next $100 plus 30.61% of next $100 plus 25.51% of next $250 plus 22.98% of next $175 plus 21.28% of next $100. *Effective for June 1976*, increase of 6.4% in benefit level. Plus 20% of next $100, *effective for January 1977.*

145.90% of first $110 plus 53.06% of next $290 plus 49.58% of next $150 plus 58.30% of next $100 plus 32.42% of next $100 plus 27.02% of next $250 plus 24.34% of next $175 plus 22.54% of next $100 plus 21.18% of next $100. *Effective for June 1977*, increase of 5.9% in benefit level. Plus 20% of next $100, *effective for January 1978.*

155.38% of first $110 plus 56.51% of next $290 plus 52.81% of next $150 plus 62.09% of next $100 plus 34.53% of next $100 plus 28.78% of next $250 plus 25.92% of next $175 plus 24.01% of next $100 plus 22.56% of next $100 plus 21.30% of next $100. *Effective for June 1978*, increase of 6.5% in benefit level.

1977 For workers who attain age 62, become disabled, or die before 1979: formula same as preceding formula plus 20% of next $435, *effective for January 1979.*

170.76% of first $110 plus 62.10% of next $290 plus 58.04% of next $150 plus 68.24% of next $100 plus 37.95% of next $100 plus 31.63% of next $250 plus 28.49% of next $175 plus 26.39% of next $100 plus 24.79% of next $100 plus 23.41% of next $100 plus 21.98% of next $435. *Effective for June 1979*, increase of 9.9% in benefit level. Plus 20% of next $250, *effective for January 1980.*

195.18% of first $110 plus 70.98% of next $290 plus 66.34% of next $150 plus 78.00% of next $100 plus 43.38% of next $100 plus 36.15% of next $250 plus 32.56% of next $175 plus 30.16% of next $100 plus 28.33% of next $100 plus 26.76% of next $100 plus 25.12% of next $435 plus 22.86% of next $250. *Effective for June 1980*, increase of 14.3% in benefit level. Plus 20% of next $315, *effective for January 1981.*

217.04% of first $110 plus 78.93% of next $290 plus 73.77% of next $150 plus 86.74% of next $100 plus 48.24% of next $100 plus 40.20% of next $250 plus 36.21% of next $175 plus 33.54% of next $100 plus 31.50% of next $100 plus 29.76% of next $100 plus 27.93% of next $435 plus 25.42% of next $250 plus 22.24% of next $315. *Effective for June 1981*, increase of 11.2% in benefit level. Plus 20% of next $225, *effective for January 1982.*

233.10% of first $110 plus 84.77% of next $290 plus 79.23% of next $150 plus 93.16% of next $100 plus 51.81% of next $100 plus 43.17% of next $250 plus 38.89% of next $175 plus 36.02% of next $100 plus 33.83% of next $100 plus 31.96% of next $100 plus 30.00% of next $435 plus 27.30% of next $250 plus 23.89% of next $315 plus 21.48% of next $225. *Effective for June 1982*, increase of 7.4% in benefit level.

[Formula applies to AIME]

1977 For workers who attain age 62, become disabled, or die in 1979: 90% of first $180 plus 32% of next $905 plus 15% of excess over $1,085. *Effective for January 1979.* (Provision for future automatic increases in bend points, $180 and $1,085, and for future automatic "cost-of-living" increases after eligibility for benefits.) *Effective for June 1979*, increase of 9.9% in benefit level. *Effective for June 1980*, increase of 14.3% in benefit level. *Effective for June 1981*, increase of 11.2% in benefit level. *Effective for June 1982*, increase of 7.4% in benefit levels.

For workers who attain age 62 in 1979-83 or die during that period after attaining age 62, PIA shall not be less than that calculated on December 1978 PIA table (based on provisions prior to 1977 Act), excluding earnings after year aged 61 in computation of AMW, and including any general benefit increases after year aged 61.

For workers who attain age 62, become disabled, or die in 1980: 90% of first $194 plus 32% of next $977 plus 15% of excess over $1,171. *Effective for June 1980*, increase of 14.3% in benefit level. *Effective for June 1981*, increase of 11.2% in benefit level. *Effective for June 1982*, increase of 7.4% in benefit level.

For workers who attain age 62, become disabled, or die in 1981: 90% of first $211 plus 32% of next $1,063 plus 15% of excess over $1,274. *Effective for June 1981*, increase of 11.2% in benefit level. *Effective for June 1982*, increase of 7.4% in benefit level.

For workers who attain age 62, become disabled, or die in 1982: 90% of first $230 plus 32% of next $1,158 plus 15% of excess over $1,388. *Effective for June 1982*, increase of 7.4% in benefit level.

[Alternative, special minimum PIA
formula applies to years of coverage]

1972b Special minimum PIA formula: $8.50 per month multiplied by the number of years of coverage above 10, limited to $170 per month. *Effective Jan. 1, 1973.* The "number of years of coverage" equals the number obtained by dividing total creditable wages in 1937–50 by $900 (but not more than 14) plus the number of years after 1950 in which the worker is credited with at least 25% of the effective annual maximum taxable earnings.

1973b $9.00 per month, limited to $180 per month. *Effective Mar. 1, 1974.*

1977 $11.50 per month, limited to $230 per month. *Effective Jan. 1, 1979.* (Provision for future automatic cost-of-living increase.) The "number of years of coverage" after 1977 equals the number of years in which the worker is credited with at least 25% of what the annual maximum taxable earnings would have been if based on only the future automatic provisions for changes in the national wage level. *Effective for June 1979*, increase of 9.9% in benefit level or approximately $12.64 per month, limited to $252.80 per month. *Effective for June 1980*, increase of 14.3% in benefit level or approximately $14.45 per month, limited to $289 per month. *Effective for June 1981*, increase of 11.2% in benefit level or approximately $16.07 per month, limited to $321.40 per month. *Effective for June 1982*, increase of 7.4% in benefit level or approximately $17.26, limited to $345.10 per month.

## Certain Maximum and Minimum Provisions

### Maximum and minimum provisions for workers who attain age 62, become disabled, or die before 1979

| Act | Effective for— | Minimum PIA [1] (based on earnings) | Maximum family benefit: Percent of AMW | Maximum family benefit: But not less than |
|---|---|---|---|---|
| 1935 | ........ | $10.00 | ........ | |
| 1939 | ........ | ........ | 80% (or 2 × PIA or $85, if less) | $20. |
| 1950 | September 1950 | 20.00 | 80% of first $187.50. | $40. |
| 1952 | September 1952 | 25.00 | 80% of first $210.93. | $45. |
| 1954 | September 1954 | 30.00 | 80% of first $250. | $50 or 1 1/2 PIA. |
| 1958 | January 1959 | 33.00 | 80% of first $317.50. | $20 + PIA or 1 1/2 PIA. |
| 1961 | August 1961 | 40.00 | ........ | 1 1/2 PIA. |
| 1965 | January 1965 | 44.00 | 80% of first $370 + 40% of next $180. | |
| 1967 | February 1968 | 55.00 | 80% of first $436 + 40% of next $214. | |
| 1969 | January 1970 | 64.00 | ........ | |
| 1971 | January 1971 | 70.40 | 88% of first $436 + 44% of next $191.[2] | |
| 1972a | September 1972 | 84.50 | 105.6% of first $436 + 52.8% of next $191.[2] | |
| 1973a [3] | June 1974 | 89.50 | 111.8% of first $436 + 55.9% of next $191.[2] | |
| 1973b | March 1974 | 90.50 | 113.0% of first $436 + 56.5% of next $191.[2] | |
| ........ | June 1974 | [4] 93.80 | 117.2% of first $436 + 58.6% of next $191.[2] [4] | |
| ........ | June 1975 | 101.40 | 126.6% of first $436 + 63.3% of next $191.[2] [4] | |
| ........ | June 1976 | 107.90 | 134.7% of first $436 + 67.3% of next $191.[2] [4] | |
| ........ | June 1977 | 114.30 | 142.6% of first $436 + 71.3% of next $191.[2] [4] | |
| ........ | June 1978 | 121.80 | 151.9% of first $436 + 76.0% of next $191.[2] [4] | |
| ........ | June 1979 | 133.90 | 167.0% of first $436 + 83.5% of next $191.[2] [4] | |
| ........ | June 1980 | 153.10 | 190.9% of first $436 + 95.4% of next $191.[2] [4] | |
| ........ | June 1981 | 170.30 | 212.3% of first $436 + 106.1% of next $191[2] [4] | |
| 1981a [5] | March 1982 | (6) | ........ | |
| 1981b | June 1982 | 182.90 | 228.0% of first $436 + 114.0% of next $191.[2] [4] | |

[1] Subject to reduction if claimed before age 65.

[2] For AMW of $628 or more, 1.75 times PIA.

[3] Eliminated by 1973b legislation.

[4] Beginning 1975, subject to automatic increase. (Superseded 1972 legislation for automatic increase.)

[5] Superseded by 1981b legislation which restored the minimum PIA for these groups.

[6] Eliminated minimum PIA.

## Maximum and minimum provisions for workers who attain age 62 or die in 1979, 1980, 1981, and 1982

| Act | Effective for— | Minimum PIA based on indexed earnings | Maximum family benefit (MFB) |
|---|---|---|---|
| | In 1979 [1] | | |
| 1977 | January 1979 | $122.00 [2] | 150% of first $230 of PIA + 272% of next $102 of PIA + 134% of next $101 of PIA + 175% of PIA over $433.[3] [4] |
| | In 1980 [1] | | |
| | January 1980 | 122.00 [2] | 150% of first $248 of PIA + 272% of next $110 of PIA + 134% of next $109 of PIA + 175% of PIA over $467.[4] [5] |
| | In 1981 [1] | | |
| | January 1981 | 122.00 [2] | 150% of first $270 of PIA + 272% of next $120 of PIA + 134% of next $118 of PIA + 175% of PIA over $508.[4] [6] |
| | In 1982 | | |
| 1981b | January 1982 | Minimum PIA eliminated [7] | 150% of first $294 of PIA + 272% of next $131 of PIA + 134% of next $129 of PIA + 175% of PIA over $554.[4] [8] |

[1] 1981a legislation would have eliminated the minimum PIA effective March 1982 for workers who attained age 62 before November 1981 or who died (before attaining age 62), before March 1982; the termination date for all others would have been November 1981. This legislation was superseded by 1981b legislation that restored the minimum PIA for workers who attained age 62 or who died (before attaining age 62), before 1982.

[2] Not subject to automatic provisions until earlier of the year attained age 65 or the year of first receipt of benefits.

[3] Any automatic benefit increases after January 1979 are applied to the calculated MFB.

[4] Bend points in formula subject to automatic provisions.

[5] Any automatic benefit increases after January 1980 are applied to the calculated MFB.

[6] Any automatic increases after January 1981 are applied to the calculated MFB.

[7] Minimum PIA eliminated for workers who attain age 62 or die after 1981. (The minimum is retained until 1991 for members of religious orders who are under a vow of poverty provided that the order had elected Social Security coverage prior to Dec. 29, 1981.)

[8] Any automatic increases after January 1982 are applied to the calculated MFB.

## Maximum and minimum provisions for workers who become disabled in 1979 and later

| Act | Effective for— | Minimum PIA based on indexed earnings | Maximum family benefit (MFB) |
|---|---|---|---|
| | In 1979 [1] | | |
| 1977 | January 1979 | $122.00 [2] | 150% of first $230 of PIA + 272% of next $102 of PIA + 134% of next $101 of PIA + 175% of PIA over $433.[3] [4] |
| | In 1980 and 1981 [1] [5] | | |
| | January 1980 | $122.00 [2] | 150% of first $248 of PIA + 272% of next $110 of PIA + 134% of next $109 of PIA + 175% of PIA over $467.[4] [5] |
| 1980 | July 1980 | 122.00 [2] | Smaller of (1) 85% of AIME or 100% of PIA, if larger, and (2) 150% of PIA.[2] [6] |
| | After 1981 | | |
| 1981b | January 1982 | Minimum PIA eliminated [7] | Smaller of (1) 85% of AIME or 100% of PIA, if larger, and (2) 150% of PIA.[2] |

[1] 1981a legislation would have eliminated the minimum PIA effective March 1982 for workers who initially became eligible for disabled-worker benefits before November 1981; the termination date for all others would have been November 1981. This legislation was superseded by 1981b legislation that restored the minimum PIA for workers who were initially eligible for disabled-worker benefits before 1982.

[2] Not subject to automatic provision until the year of first receipt of benefits.

[3] Any automatic benefit increases after January 1979 are applied to the calculated MFB.

[4] Bend points in formula subject to automatic provisions.

[5] Any automatic benefit increases after January 1980 are applied to the calculated MFB.

[6] Effective for initial entitlements after June 1980 if onset of disability is in 1979 or later.

[7] Minimum PIA eliminated for workers who become disabled after 1981. (The minimum is retained until 1991 for members of religious orders who are under a vow of poverty provided that the order had elected Social Security coverage before Dec. 29, 1981.)

## Earnings test

| Act | Beneficiary exempt | Earnings subject to test | Amount permitted without reduction in benefits | | Reduction in monthly benefits | |
|---|---|---|---|---|---|---|
| | | | Annual earnings | Monthly wages [1] | Amount | Effective for taxable years |
| 1935 | ........ | Covered | ........ | ........ | Full monthly benefit | ........ |
| 1939 | ........ | ........ | ........ | $14.99 | ........ | Beginning Jan. 1, 1940. |
| 1950 | Aged 75 or older | ........ | [2] $600 | 50.00 | ........ | Beginning Sept. 1, 1950. |
| 1952 | ........ | ........ | [2] 900 | 75.00 | ........ | Ending after August 1952. |
| 1954 | Aged 72 or older | Covered and noncovered [3] | [4] 1,200 | 80.00 | One month's benefit for each $80 or fraction thereof. | Beginning after December 1954. |
| 1956 | Disabled | ........ | ........ | ........ | ........ | ........ |
| 1958 | ........ | ........ | ........ | 100.00 | ........ | Beginning after August 1958. |
| 1960 | ........ | ........ | ........ | ........ | $1 for each $2 of earnings from $1,201–$1,500. | Beginning after December 1960. |
| | ........ | ........ | ........ | ........ | $1 for each $1 of earnings above $1,500. | ........ |
| 1961 | ........ | ........ | ........ | ........ | $1 for $2 of earnings from $1,201–$1,700. | Ending after June 30, 1961. |
| | ........ | ........ | ........ | ........ | $1 for each $1 of earnings above $1,700. | ........ |
| 1965 | ........ | ........ | [4] 1,500 | 125.00 | $1 for each $2 of earnings from $1,501–$2,700. | Ending after Dec. 31, 1965. |
| | ........ | ........ | ........ | ........ | $1 for each $1 of earnings above $2,700. | ........ |
| 1967 | ........ | ........ | [4] 1,680 | 140.00 | $1 for each $2 of earnings from $1,681–$2,880. | Ending after December 1967. |
| | ........ | ........ | ........ | ........ | $1 for each $1 of earnings above $2,880. | ........ |
| 1972b | ........ | ........ | [5] 2,100 | 175.00 | $1 for each $2 of earnings above $2,100. | Ending after December 1972. |
| 1973ab [6] | ........ | ........ | [5] 2,400 | 200.00 | $1 for each $2 of earnings above $2,400. | Beginning after Dec. 31, 1973. |
| | ........ | ........ | [5,7] 2,520 | [7] 210.00 | $1 for each $2 of earnings above $2,520. | Beginning after Dec. 31, 1974. |
| | ........ | ........ | [5,7] 2,760 | [7] 230.00 | $1 for each $2 of earnings above $2,760. | Beginning after Dec. 31, 1975. |
| | ........ | ........ | [5,7] 3,000 | [7] 250.00 | $1 for each $2 of earnings above $3,000. | Beginning after Dec. 31, 1976. |
| 1977 | ........ | For beneficiaries under age 65 | [7] 3,240 | [7,8] 270.00 | $1 for each $2 of earnings above $3,240. | Beginning after Dec. 31, 1977. |
| | ........ | ........ | [7] 3,480 | [7,8] 290.00 | $1 for each $2 of earnings above $3,480. | Beginning after Dec. 31, 1978. |
| | ........ | ........ | [7] 3,720 | [7,8] 310.00 | $1 for each $2 of earnings above $3,720. | Beginning after Dec. 31, 1979. |
| | ........ | ........ | [7] 4,080 | [7,8] 340.00 | $1 for each $2 of earnings above $4,080. | Beginning after Dec. 31, 1980. |
| | ........ | ........ | [7] 4,440 | [7,8] 370.00 | $1 for each $2 of earnings above $4,440. | Beginning after Dec. 31, 1981. |
| | ........ | For beneficiaries aged 65–72 | [5] 4,000 | [8] 333.33 | $1 for each $2 of earnings above $4,000. | Beginning after Dec. 31, 1977. |
| | ........ | ........ | [5] 4,500 | [8] 375.00 | $1 for each $2 of earnings above $4,500. | Beginning after Dec. 31, 1978. |
| | ........ | ........ | [5] 5,000 | [8] 416.66 | $1 for each $2 of earnings above $5,000. | Beginning after Dec. 31, 1979. |
| | ........ | ........ | [5] 5,500 | [8] 458.33 | $1 for each $2 of earnings above $5,500. | Beginning after Dec. 31, 1980. |
| | Aged 70 or older [9] | ........ | [5] 6,000 | [8] 500.00 | $1 for each $2 of earnings above $6,000. | Beginning after Dec. 31, 1981. |
| 1980 | ........ | ........ | (10) | ........ | ........ | ........ |
| 1981a | Aged 70 or older | ........ | (7) | (7) | ........ | Beginning after Dec. 31, 1982. |

---

[1] Monthly test for self-employment income is defined in terms of substantial services.

[2] Applied to self-employment income only.

[3] Special provisions for earnings in noncovered employment outside United States.

[4] Includes earnings during the first year of eligibility for benefits and during the year of attainment of exempt age of 72.

[5] Excludes earnings in and after month of attainment of exempt age.

[6] Beginning 1975, subject to automatic increases. (Superseded 1972 legislation for automatic increases.)

[7] Automatic increase.

[8] Monthly test eliminated for years beginning after Dec. 31, 1977, except that each individual may use the monthly test for 1 grace year, usually the year of retirement.

[9] 1981a legislation postponed the effective date of the new exempt age by 1 year.

[10] Excludes self-employment income received in a year after entitlement but derived from pre-entitlement services.

## Type of Monthly Benefits

| Act | Type of benefit | | Percent of PIA | Conditions |
|---|---|---|---|---|
| | | | | **Insured Worker** |
| 1935 | Retired worker: | Aged 65 or older | | *Fully insured.* Amount based on cumulative wages. |
| 1939 | | | 100 | Amount based on PIA. |
| 1956 | Women: | Aged 62–64 | | Reduced 5/9% for each month under age 65. |
| 1961 | Men: | Aged 62–64 | | Reduced 5/9% for each month under age 65. |
| 1972b | | | | Increased 1/12% for each month between ages 65 and 72 for which no benefits received after 1970 (PIA based on AMW only). Applicable only to worker whose benefit has not been actuarially reduced. |
| 1977 | | | | Increased 1/4% for each month after 1981 and between ages 65 and 72 in which no benefits received. Requirement for nonreceipt of actuarially reduced benefit removed. |
| 1956 | Disabled worker: | Aged 50–64 | 100 | *Disability insured.* Waiting period of 6 calendar months. Reduced by amount of workers' compensation. |
| 1958 | | | | Reduction for workers' compensation eliminated. |
| 1960 | | Under age 65 | | |
| 1965 | | | | Reduced if benefits plus workers' compensation exceed 80% of the higher of AMW or high-5-year average taxable earnings in covered employment. Adjusted periodically for rises in wage levels. |
| 1967 | | | | Reduced if benefits plus workers' compensation exceed 80% of the higher of AMW or high-5-year average earnings in covered employment, regardless of taxable limit. |
| 1972b | | | | Reduced if benefits plus workers' compensation exceed 80% of the highest of (a) AMW, (b) high-5-year average earnings, or (c) highest annual earnings in the period consisting of year of disability onset and 5 preceding years in covered employment. Waiting period reduced to 5 calendar months. |
| 1981a | | | | Reduced if benefits plus workers' compensation plus certain disability benefits under a Federal, State or local law exceed 80% of the highest of (a) AMW, (b) high-5-year average earnings, or (c) highest annual earnings in the period consisting of year of disability onset and 5 preceding years in covered employment. |
| | | | | **Dependents of Retired-Worker Beneficiary** |
| 1939 | Wife: | Aged 65 or older | 50 | *Fully insured.* |
| 1950 | | Under age 65 | | Caring for eligible child. |
| 1956 | | Aged 62–64 | | Reduced 25/36% for each month under age 65. |
| 1965 | | | | Eligible child excludes student aged 18–21. |
| 1967 | | | | Maximum $105. |
| 1969 | | | | Maximum eliminated. |
| 1977 | | | | Reduced by any retirement pension payable based on own earnings in noncovered governmental employment. Reduction does not apply if eligible for such pension before December 1982. |
| 1981a | | | | Eligible child excludes nondisabled child aged 16–17. |
| 1939 | Child: | Under age 18 | 50 | *Fully insured.*[1] Student at ages 16–17. |
| 1946 | | | | Student requirement eliminated. |
| 1965 | | Aged 18–21 | | Full-time student. |
| 1972b | | | | Benefits extended to end of quarter or semester in which 22d birthday occurs while undergraduate student. |
| | | | | Includes grandchild under certain circumstances. |
| 1981a | | Aged 18–22 | | Student category eliminated (to be phased out gradually for those entitled before May 1982), except for elementary or secondary school students under age 19. |

---

[1] Under 1939 Act, not generally available to child of married woman worker. Under 1950 Act, available if woman worker is *fully* and *currently* insured; currently insured requirement eliminated in 1967 Act.

| Act | Type of benefit | | Percent of PIA | Conditions |
|---|---|---|---|---|
| 1956 | Disabled child: | Aged 18 or older | 50 | *Fully insured.*[1] Disabled before age 18. |
| 1972b | | | | Disabled before age 22. |
| | | | | Includes grandchild under certain circumstances. |
| 1950 | Husband: | Aged 65 or older | 50 | *Fully and currently insured.* Dependent. |
| 1961 | | Aged 62–64 | | Reduced 25/36% for each month under age 65. |
| 1967 | | | | *Currently insured* requirement eliminated. Maximum $105. |
| 1969 | | | | Maximum eliminated. |
| 1977 | | | | Dependency requirement eliminated. |
| | | | | Noncovered pension offset (see Wife). However, delay of applicability of offset until December 1982 does not apply unless dependent on spouse. |
| 1980 [2] | | Under age 65 | | Caring for eligible child. |
| 1981a | | | | Eligible child excludes nondisabled child aged 16–17. |
| 1965 | Divorced wife: | Aged 65 or older | 50 | *Fully insured.* Dependent. Married 20 years. |
| | | Aged 62–64 | | Reduced 25/36% for each month under age 65. |
| 1967 | | | | Maximum $105. |
| 1969 | | | | Maximum eliminated. |
| 1972b | | | | Dependency requirement eliminated. |
| 1977 | | | | Married 10 years. Noncovered pension offset (see Wife). However, exemption from offset does not apply unless marriage lasted 20 years before divorce. |
| 1977 [3] | Divorced husband: | Aged 65 or older | 50 | *Fully insured.* Married 10 years. Noncovered pension offset (see Husband). However, exemption from offset does not apply unless marriage lasted 20 years before divorce. |

### Dependents of Disabled-Worker Beneficiary

| Act | Type of benefit | | Percent of PIA | Conditions |
|---|---|---|---|---|
| 1958 | Same as dependents of retired-worker beneficiary | | 50 | *Disability insured.* Same as dependents of retired-worker beneficiary. |

### Survivors

| Act | Type of benefit | | Percent of PIA | Conditions |
|---|---|---|---|---|
| 1939 | Widowed mother | | 75 | *Fully or currently insured.* Caring for eligible child. |
| 1950 | | | | Divorced and dependent. |
| 1965 | | | | Eligible child excludes student over age 18. |
| 1972b | | | | Dependency requirement eliminated for divorced mother. |
| 1977 | | | | Noncovered pension offset (see Wife). |
| 1981a | | | | Eligible child excludes nondisabled child aged 16–17. |
| 1939 | Widow: | Aged 65 or older | 75 | *Fully insured.* |
| 1956 | | Aged 62–64 | | |
| 1961 | | | 82 1/2 | |
| 1965 | | | | Divorced wife, dependent and married 20 years. |
| | | Aged 60–61 | | Reduced 5/9% for each month under age 62. |
| 1972b | | Aged 65 or older | 100 | Limited, if husband (or former husband) retired before age 65, to amount husband would be receiving if still living, but not less than 82 1/2% of PIA. |
| | | Aged 60–64 | | Reduced 19/40% for each month under age 65. In addition, for a widow aged 62–64 whose husband (or former husband) retired before age 65, limited to amount he would be receiving if still living, but not less than 82 1/2% of PIA. |
| | | | | Dependency requirement eliminated for divorced wife. |
| 1977 | | | | Increased by any delayed retirement increment husband (or former husband) would be receiving. Marriage requirement reduced to 10 years for divorced wife. Noncovered pension offset (see Wife). However, exemption from offset does not apply to surviving divorced wife unless marriage lasted 20 years before divorce. |

## Other OASDI Benefits

| Act | Type of benefit | Conditions |
|---|---|---|
| 1935 | Lump-sum refund at age 65 | Not insured. 3 1/2% of cumulative wage credits. |
| 1939 | | Refund eliminated. |
| 1935 | Lump-sum death payments: | |
| | Under age 65 | 3 1/2% of cumulative wage credits. |
| | Aged 65 or older | *Fully insured.* 3 1/2% of cumulative wage credits, less monthly benefits received. |
| 1939 | Any age | *Fully or currently insured.* 6 times primary insurance benefit if no survivor eligible for monthly benefits. |
| 1950 | | 3 times PIA for all deaths. |
| 1954 | | Maximum of $255 specified. |
| 1981a | | Payable only to surviving spouse or children eligible for benefits. |
| 1954 | Period of disability: Aged 50-64 | *Disability insured.* Period excluded in computation of AMW. |
| 1960 | Under age 65 | |
| 1965 | Rehabilitation services | Available to selected disabled individuals. Costs of services payable from Social Security trust funds to State vocational rehabilitation agencies. Reimbursement in any year may not exceed 1% of the total amount of Social Security disability benefits disbursed in the previous year. |
| 1972b | | Maximum annual reimbursement increased to 1.25% for fiscal year ending June 30, 1973, and 1.50% thereafter. |

## Rounding of Benefit Amounts

| Act | Type of Rounding |
|---|---|
| 1935 | Nearest cent. |
| 1950 | Next higher $10 at each computation step. |
| 1981 | Next lower $.10 at each computation step.<br>Final individual benefit check (after SMI premium and some other deductions, if any) to next lower $1 (if not already multiple of $1). |

## Medicare Benefits

Act

### Hospital Insurance Benefits

1965 In each benefit period, inpatient hospital services, 90 days. Includes semiprivate accommodations, operating room, hospital equipment (including renal dialysis), laboratory tests and X-rays, drugs, dressings, general nursing services, and services of interns and residents in medical, osteopathic, or dentistry training. Inpatient psychiatric hospital care limited to 190-day lifetime maximum. Outpatient hospital diagnostic services. Posthospital extended-care services, 100 days (including physical, occupational, and speech therapy). Posthospital home health services, 100 visits. Deductible and coinsurance provisions (see table on Medicare cost sharing and premium amounts, page 24).

1967 Lifetime reserve of 60 additional days of inpatient hospital services. Outpatient hospital diagnostic services transferred to Supplementary Medical Insurnace.

1972b Services of interns and residents in podiatry training.

1980 Home health services with no restrictions. Alcohol detoxification facility services.

### Supplementary Medical Insurance Benefits

1965 Physician and surgeon services. In-hospital services of anesthesiologist, pathologist, radiologist, and physiatrists. Limited dental services. Home health services, 100 visits in calendar year. Other medical services including various diagnostic tests, limited ambulance services, prosthetic devices, rental of durable medical equipment used at home (including equipment for dialysis), and supplies used for fractures. Deductible and coinsurance provisions (see table on Medicare cost sharing and premium amounts, page 24).

1967 Outpatient hospital diagnostic services, transferred from Hospital Insurance. Includes physical therapy services in a facility. Purchase of durable medical equipment.

1972b Physical therapy services furnished by a therapist in his/her office or individual's home (limited to $100 expenses in calendar year). Chiropractor services (limited to manual manipulation of the spine). Outpatient services include speech pathology services furnished in, or under arrangements with, a facility or agency. Services of a doctor of optometry in furnishing prosthetic lenses.

1977 Services in rural health clinics.

1980 Home health services unlimited. Facility costs of certain surgical procedures performed in freestanding ambulatory surgical centers.

Increased annual limit for outpatient therapy from $100 to $500.

Recognizes comprehensive outpatient rehabilitation facilities as Medicare providers.

1981a Part A coinsurance is based on the deductible for the calendar year in which services are received rather than the deductible in effect at the time the beneficiary's spell of illness began.

Elimination of carryover from previous year of incurred expenses for meeting the Part B deductible.

[4] Professional inpatient services of pathologists and radiologists not subject to deductible or coinsurance.

[5] Beginning January.

[6] Home health services not subject to coinsurance.

[7] Monthly premium for July and August 1973 was reduced to $5.80 and $6.10, respectively, by the Cost of Living Council.

[8] Home health services not subject to deductible.

[9] Same as footnote 4, but only when physician accepts assignment.

## Automatic Provisions

### Cost-of-Living Increase in Benefits*

Beginning in calendar year 1975, an annual determination is made as to whether or not a "cost-of-living" increase in cash benefits should be established. (Such a determination is not made in a calendar year following a year in which Congress has enacted a general benefit increase or one has become effective.) The arithmetical mean of the consumer price index (CPI) prepared by the Department of Labor for January, February, and March in the year of computation is divided by the latest of the arithmetical mean of the CPI for (a) January, February, and March of the year in which the last effective cost-of-living increase was established or (b) the 3 months of the calendar quarter in which the effective month of the last general benefit increase occurred.[1] If such quotient (rounded to the nearest one-tenth of 1 percent) indicates an increase of 3 percent or more, then a cost-of-living increase in benefits is established and the level of benefits is increased by the same percentage, effective for June of the year in which the determination is made.

If the contribution and benefit base is raised (see below), the benefit formula provides an additional 20-percent replacement on that part of the average monthly wage above the previous monthly contribution and benefit base.

Public Law 95–216 (signed December 20, 1977) established that the cost-of-living adjustments to benefits continue for all workers and their spouses and children and survivors with benefits when a cost-of-living increase becomes effective. In addition, the future benefit formula for all workers who attain age 62, become disabled, or die before 1979 is determined in the same manner as before the 1977 Social Security Amendments. (See below for automatic adjustments to the future benefit formula applicable to workers who attain age 62, become disabled, or die after 1978.)

---

* Provisions (first enacted in 1972 legislation) as revised by 1973 and 1977 legislation.

[1] For the first determination in 1975, the arithmetical mean of the CPI for January, February, and March of 1975 was divided by the arithmetical mean of the CPI for April, May, and June 1974 (the effective quarter of the 11-percent general benefit increase).

Beginning June 1979, the special minimum primary insurance amount (PIA) is automatically increased by the same percentage as determined above. This increase applies to present benefits and future potential benefits.

### Adjustments in Contribution and Benefit Base

In 1974, and every year thereafter, whenever a cost-of-living benefit increase is established, a determination is made as to whether an adjustment in the maximum amount of annual earnings that will be taxed and credited toward benefits is required. The determination is made by multiplying the contribution and benefit base in effect in the year of determination by the ratio of the average taxable wages (under the Social Security program) of all employees, as reported for the first calendar quarter of the year of determination, to the average taxable wages of all employees as reported for the first calendar quarter of the year in which the last automatic determination was made that resulted in a base increase or of the year in which a legislative increase in the base was enacted.[2] The 1977 amendments provided that after 1977 the average annual wages will be based on the total wages reported to the Secretary of the Treasury. The product, rounded to the nearest multiple of $300, will be the amount of the contribution and benefit base, effective with respect to remuneration paid after the year of determination and with respect to taxable years beginning after that year. In no case, however, will the base be reduced to an amount lower than the base in the year of determination.

The 1977 amendments provided that after 1977 a "year of coverage" used in computing the special minimum PIA is counted when earnings are not less than 25 percent of the maximum annual contribution and benefit base that would have been determined on the basis of the automatic provisions as described above. On this basis, a "year of coverage" is credited if earnings are no less than the following amounts:

| Year | Credited earnings |
|---|---|
| 1978 | $4,425 |
| 1979 | 4,725 |
| 1980 | 5,100 |
| 1981 | 5,550 |
| 1982 | 6,075 |

### Adjustments in Earnings Test

In 1974, and every year thereafter, whenever a cost-of-living benefit increase is established, a determination is made as to whether an adjustment in the amount of earnings permitted without reduction in benefits is required. The determination is made by multiplying the monthly exempt amount in effect by the ratio of the average taxable wages (under the Social Security program) of all employees as reported for the first calendar quarter of the year of determination, to the average taxable wages of all employees as reported for the first calendar quarter of the year in which the last automatic determination was made that resulted in an increase in the monthly exempt amount or of the year in which a legislative increase in the monthly exempt amount was enacted.[2] The 1977 amendments provided that after 1977 the average annual wages will be based on total wages reported to the Secretary of the Treasury. The product, rounded to the nearest multiple of $10, will be the new monthly exempt amount effective with respect to taxable years ending after the year of determination (except if Congress has enacted an increase in the exempt amount in the year of determination). In no case, however, will the new exempt amount be reduced to an amount lower than the exempt amount in the year of determination. The new annual exempt amount will be determined by multiplying the new monthly amount by 12.

### Adjustments in Amount Required for a Quarter of Coverage

Beginning in calendar year 1978, an annual determination is made as to the amount of wages and self-employment earnings required for an individual to be credited with a quarter of coverage in the succeeding calendar year. The amount required for a quarter of coverage is the larger of (a) the amount in effect or (b) the product of $250 (in effect 1978) multiplied by the ratio of the average of total wages reported to the Secretary of the Treasury for the calendar year before the year in which the determination is made to the average of total wages for 1976. The product in (b) is rounded to the nearest multiple of $10.

### Adjustments in the Benefit Formula

Beginning in calendar year 1979, the benefit formula is adjusted annually. The adjustment is made by multiplying the amounts $180 and $1,085 of the average indexed monthly earnings in the benefit formula established for 1979 (90% of the first $180 plus 32% of the next $905 plus 15% of excess over $1,085) by the ratio of the average of total wages reported to the Secretary of the Treasury for the second calendar year before the year for which the adjustment is made to the average of total wages for 1977. The result of each product is rounded to the nearest dollar.

---

[2] This method is applicable for determinations in 1974 and 1975. Public Law 94-202 (signed Jan. 2, 1976) revised the adjustment for succeeding years by using increases in average wages and increasing by a year the lag in average wages used in the computation. Thus the 1976 determination was based on the percentage increase in average wages between 1974 and 1975.

## Average wage series for indexing earnings, 1951–82

| Year | Annual maximum taxable earnings | Average annual earnings [1] | Annual maximum indexed earnings for workers who attain age 62, become disabled, or die in— | | | |
|---|---|---|---|---|---|---|
| | | | 1979 [2] | 1980 [3] | 1981 [4] | 1982 [5] |
| 1951 | $3,600 | $2,799.16 | $12,577.34 | $13,576.11 | $14,763.73 | $16,093.56 |
| 1952 | 3,600 | 2,973.32 | 11,840.63 | 12,780.90 | 13,898.96 | 15,150.89 |
| 1953 | 3,600 | 3,139.44 | 11,214.10 | 12,104.61 | 13,163.51 | 14,349.20 |
| 1954 | 3,600 | 3,155.64 | 11,156.53 | 12,042.47 | 13,095.93 | 14,275.54 |
| 1955 | 4,200 | 3,301.44 | 12,441.13 | 13,429.09 | 14,603.85 | 15,919.28 |
| 1956 | 4,200 | 3,532.36 | 11,627.82 | 12,551.19 | 13,649.16 | 14,878.59 |
| 1957 | 4,200 | 3,641.72 | 11,278.64 | 12,174.28 | 13,239.27 | 14,431.79 |
| 1958 | 4,200 | 3,673.80 | 11,180.15 | 12,067.97 | 13,123.67 | 14,305.77 |
| 1959 | 4,800 | 3,855.80 | 12,174.21 | 13,140.97 | 14,290.53 | 15,577.73 |
| 1960 | 4,800 | 4,007.12 | 11,714.48 | 12,644.73 | 13,750.88 | 14,989.47 |
| 1961 | 4,800 | 4,086.76 | 11,486.19 | 12,398.32 | 13,482.91 | 14,697.37 |
| 1962 | 4,800 | 4,291.40 | 10,938.46 | 11,807.09 | 12,839.96 | 13,996.51 |
| 1963 | 4,800 | 4,396.64 | 10,676.63 | 11,524.47 | 12,532.62 | 13,661.48 |
| 1964 | 4,800 | 4,576.32 | 10,257.44 | 11,071.98 | 12,040.55 | 13,125.09 |
| 1965 | 4,800 | 4,658.72 | 10,076.01 | 10,876.15 | 11,827.59 | 12,892.94 |
| 1966 | 6,600 | 4,938.36 | 13,069.99 | 14,107.88 | 15,342.02 | 16,723.94 |
| 1967 | 6,600 | 5,213.44 | 12,380.37 | 13,363.50 | 14,532.52 | 15,841.52 |
| 1968 | 7,800 | 5,571.76 | 13,690.40 | 14,777.56 | 16,070.29 | 17,517.80 |
| 1969 | 7,800 | 5,893.76 | 12,942.44 | 13,970.20 | 15,192.30 | 16,560.73 |
| 1970 | 7,800 | 6,186.24 | 12,330.[illegible] | 13,309.71 | 14,474.02 | 15,777.76 |

| 1981 | 29,700 | ..... | 29,700.00 | 29,700.00 | 29,700.00 | 29,700.00 |
| 1982 | 32,400 | ..... | 32,400.00 | 32,400.00 | 32,400.00 | 32,400.00 |

[1] National average wage levels. For years before 1978, average wages were determined from wages earned during the first quarter of the year and reported to the Social Security Administration (SSA) for Social Security tax purposes. These wages were then multiplied by 4 to obtain the average wage for the year. For 1973–77, from data collected on all taxable wages reported to SSA; for 1957–72, based on 1% statistical sample; for 1951–56, based on 1/10 of 1% statistical sample. For years after 1977, total wage data from W-2 forms submitted to IRS divided by number of individuals with wages.

[2] For any year before 1978, annual maximum indexed earnings equals annual maximum taxable earnings for such year times 9,799.44 divided by average annual earnings for such year; for each year after 1977, annual maximum indexed earnings equals annual maximum taxable earnings for such year.

[3] For any year before 1979, annual maximum indexed earnings equals annual maximum taxable earnings for such year times 10,556.03 divided by average annual earnings for such year; for each year after 1978, annual maximum indexed earnings equals annual maximum taxable earnings for such year.

[4] For any year before 1980, annual maximum indexed earnings equals annual maximum taxable earnings for such year times 11,479.46 divided by average annual earnings for such year, for each year after 1979, annual maximum indexed earnings equals annual maximum taxable earnings for such year.

[5] For any year before 1981, annual maximum indexed earnings equals annual maximum taxable earnings for such year times 12,513.46 divided by average annual earnings for such year; for each year after 1980 annual maximum indexed earnings equals annual maximum taxable earnings for such year.

[6] For consistency with the average wage series for 1951–77, the 1978 average was obtained by multiplying the 1977 average of the series ($9,779.44) by the ratio of 1978–77 wages ($10,840.68/$10,043.15) based on IRS data; the 1979 average was obtained by multiplying the 1978 average of the series ($10,556.03) by the ratio of 1979–78 wages ($11,789.01/$10,840.68) based on IRS data; the 1980 average was obtained by multiplying the 1979 average of the series ($11,479.46) by the ratio of 1980–79 wages ($12,850.89/$11,789.01) based on IRS data.

## Cumulative effect of statutory and automatic increases in primary insurance benefits under OASDI program: Minimum percentages, 1959–82
